

# TABLE OF CONTENTS

## PREFACE

1. General introduction to test cases 1

2. Test case calculations 2

2.1 Introduction of experimental results for test case calculations

K. Hishida and M. Maeda 3

Turbulent characteristics of gas-solids two-phase confined jet: Effect of particle density.

M. Sommerfeld and H.-H. Qiu 15

Detailed measurements in a swirling particulate two-phase flow by a phase-Doppler anemometer

2.2 Introduction of applied numerical methods 33

A. Ando and M. Sommerfeld 34

Description of the numerical method for calculation of particle dispersion in a swirling gas-particle flow

E. Blümcke 36

Short description of the model

P. Desjonqueres; A. Berlemont and G. Gouesbet 38

Langrangian Simulation of dispersed two-phase flows

R. I. Issa and P. J. Oliveira 39

Method for prediction of particulate jets

O. Simonin 40

An Eulerian approach for turbulent two-phase flows loaded with discrete particles: code description

D. Wennerberg 42

Code description

2.3 Results of Test Case 1 43

2.4 Results of Test Case 2 57

2.5 Results of Test Case 3 70

3. Workshop Presentations 88

3.1 New ideas for modelling turbulent two-phase flows

E. Andresen 89

Statistical approach to a continuum model for the disperse phase in gas- particle flows

A Berlemont, G. Gouesbet and M.S. Grancher 100

Lagrangian simulation of turbulence influence on droplet evaporation

E. Blümcke, H. Eickhoff and C. Hassa 109

Evaluation of a spectral dispersion model with experimental results obtained from the dispersion of monosized droplets in a turbulent swirling flow

J.K. Eaton, C.B. Rogers and K.D. Squires 121

Physical and numerical experiments on turbulence attenuation by dispersed particles

H. Fogt and M. Peric 130

Finite-volume approach of two-fluid modelling of two-phase flow: Some consistency problems

X.Q. Huang and L.X. Zhou 140

Simulation of three-dimensional recirculating gas-particle flows by an energy equation model of particle turbulence

B. Oesterle 148

Numerical prediction of particle trajectories in a pipe bend

O. Simonin 156

Eulerian formulation for particle dispersion in turbulent two-phase flows

M. Sommerfeld and M. Founti 167

Modelling of particle wall collisions in confined gas particle flows

P. Hutchinson, J.S.C. Tan and M.E. Gill 186

Droplet dispersion in an isotropic, homogeneous turbulent flow using a diffusion stochastic method

3.2 Applications of numerical methods to particle flow situations 198

J.L.T. Azevedo and J.C.F. Pereira 199

Calculation of co-axial confined two-phase flows with swirl

Th. Flower and A Breuer 211

Experimental research and numerical simulations of the Diesel spray

R.Meyder 224

Investigation of the turbulent transport of a dispersed phase (bubbles) in a turbulent continuous phase

V.A Soumoy 234

Lagrangian prediction of fluid particle dispersion: Application to pollutant concentration in industrial premises

D. Wennerberg 249

Aspects on prediction of the two-phase reacting flow in a swirl- stabilized pulverized coal flame

G. Zivkovic and D. Milojevic 261

Particle melting and evaporation in plasma

3.3 Experimental research promoting the modelling of two-phase flows 271

T. Kraut, P. Drtina and A Frohn 272

Behaviour of droplet systems in turbulent flows including droplet- droplet and droplet-wall interaction

D. B. Murray and J. A Fitzpatrick 282

Heat transfer and LDA-measurements in a tube array for a gas particle flow

A. Naqwi, X. Liu and F. Durst 294

Measurement of particle size and refractive index using an extended phase-Doppler system

W. Sengpiel and R. Meyder 308

The development of bubbly two-phase flow in vertical channels with reference to local relative gas fraction and turbulence structure: Experimental results at KFK

F. Yarnamoto, M. Koukawa, H. Monya and A Teranishi 323

Particle lift and drag forces in linear turbulent shear flows

4. References 333

5. List of Participants 334
