

Introduction 1

1. Hard Thin Layer Coatings Characteristics	3
2. Coatings Characterization Methods Classification	3
3. The Main Features of Destructive Tests (DT)	3
3.1 Use of DT at composition analysis of TiN coatings	4
4. The Main Features of Non-Destructive Tests (NDT)	5
4.1 Composition analysis by NDT	8
4.1.1 Auger electron spectroscopy (AES)	8
4.1.2 X-ray photoelectron spectroscopy (XPS/ESCA) techniques	9
4.1.3 Ion Scattering Spectroscopy (ISS) and Secondary Ion Mass Spectroscopy (SIMS)	9
4.1.4 Rutherford Back Scattering Technique (RBS)	11
4.2 Use of NDT at chemical composition analysis of TiN coatings	11
4.2.1 Stoichiometry of the present phases determination by NDT	20
5. Crystallinity of the Present Phases Investigations	21
6. TiN Micostructure/Morphology Investigations	24
7. Mechanical Properties Characterization	34
7.1 Hardness/microhardness testing methods	34
7.2 Layer adhesion to the substrate testing	35
7.2.1 General remarks	35
7.2.2 TiN coating adhesion testing methods	36
7.3 Coating wear resistance testing	38
8. Coating Corrosion/ Abrasion Resistance Testing	39
9. Optical Properties Deterrnination	41
10. Coating Thickness Measurements	41
11. TiN Decorative Properties Investigations	42
