

Introduction

1. THE MAIN FEATURES OF CVD 3

1.1 Classification of Chemical Reactions in CVD 4

1.2 Thermodynamic Aspects of CVD 5

1.3 Chemical Kinetics Considerations 8

1.4 Physics of CVD 11

1.4.1 Temperature Dependence of the Physical Properties of Gases. 11

1.4.2 Gas Flow Phenomena in CVD 12

1.4.2.1 Convective Transport 13

1.4.2.1.1 The Flows Development 15

1.4.2.2 Transport by Diffusion. 17

1.4.2.3 Mixed-Convective Conditions 17

1.4.2.4 Unsteady Flow Conditions. 18

1.5 The Role of Coating/Substrate Compatibility 19

1.5.1 The Mode of Nucleation and Film Formation 19

1.5.2 Factors Affecting Coating/Substrate Adhesion 20

2. CVD EQUIPMENT 22

2.1 Reactants-Feed System. 22

2.2 CVD Coating Reactors 23

2.2.1 Cold-Wall Reactors 23

2.2.2 Hot-Wall Reactors 24

2.2.3 Vertical Reactors 24

2.2.4 Horizontal Reactors 24

2.2.5 Fluidized-Bed Reactors 25

2.2.6 Continuous, In-line CVD Reactors 25

2.3 pumping System 25

2.4 Accessory Equipment, Process Control 26

3. Some Recent Extension of CVD Application in the Field of Multilayer Coatings Production 27

3.1 Concepts of Multilayer Coatings and Consequences for Future Development 27

3.2 CVD Multilayers Formation, Process Peculiarities and Multilayers in Non-Electronic Applications 29

3.2.1 Multilayers -Wear Resistant Coatings 29

3.2.2 Multilayers -Heat Resistant Materials 33

3.3 The Newest Trends in Multilayers Production .33

4. Final Remarks Future Areas of CVD Development and Crucial Problems 36
