

## INTRODUCTION 1

### 1. MAIN FEATURES OF PACVD TECHNIQUE 3

1.1 The role of Glow Discharge in Plasma Processes 4

1.2 Collision Dissociation by Electrons 5

1.3 Transport Kinetics Effect 5

1.4 Spatial Chemical Effects 6

1.5 P ACVD -Advantages and Limitations 6

### 2. APPLICATION OF PACVD IN TiN COATINGS FORMATION 9

2.1 PACVD Coatings Preparation Applying Metal Halides 9

2.1.1 Basic Principles 9

2.1.2 Research Experiences 10

2.2 PACVD ofTiN Applying  $\text{TiCl}_4\text{-NH}_3$  Reactive Mixture 20

2.2.1 Basic Process Principles 20

2.2.2 Thermodynamic Considerations 21

2.2.3  $\text{NH}_3$  Decomposition at Plasma Conditions 23

2.2.4 Practical Experiences 23

2.3 PACVD TiN Applying Organo-Metallic Precursors 25

2.3.1 Basic Process Principles 25

2.3.2 Most Recent Experiences 26

### 3. ON SOME DETAILS OF PACVD OF TiN REVEALED AT OUR RECENT INVESTIGATIONS 29

3.1 General Remarks 29

3.2 PACVD Apparatus Design 29

3.2.1 Imposed Requirements 29

3.2.2 Apparative Details 30

3.2.3 Importance of the Gas Inlet/Gas Distribution System Configuration 32

3.2.4 Accessory Equipment, Process Control 33

3.3 Process Performance Details. 33

3.3.1 Materials Applied 33

3.3.2 Samples and Samples Preparation 34

3.3.3 Coating Procedure 34

3.3.3.1 Predeposition Steps 35

3.3.3.2 Deposition Step 35

3.3.4 Effect ofDifferent Proceess Variables 35

3.3.5 Most Convenient Deposition Parameters 40

3.4 Coatings Characterization 40

3.4.1 Optical Microscopy 40

3.4.2 Coating Crystallinity 42

3.4.3 Coating Morphology, Microstructure 43

3.4.4 Adhesion 43

3.4.5 Microhardness 44

3.4.6 Colour of the Coatings 44

**4. SUMMARIZING REMARKS AND FUTURE AREAS OF DEVELOPMENT 45**
