

1 INTRODUCTION 9

2 GENERAL METHODOLOGICAL PRINCIPLES 12

2.1 Objectives and Problems of Impact Analysis 12

2.1.1 Preliminary Remarks 12

2.1.2 Types of Measures 15

2.1.3 Impacts of Measures 17

2.1.4 Analytical Methods 19

2.2 International Comparison: Methodological Approaches in the First National Reports by the States Party to the Framework Convention on Climate Change 23

2.3 Possibilities and Limitations of Formal Models 29

2.3.1 Problem Areas 29

2.3.2 Application of a Simulation Model with the Example of DOE Methodology 30

2.3.3 Opportunities for Applying Optimization Models with the Example of the IKARUS Model 31

2.3.4 Significance of Uncertainties and Long- Term Aspects 34

3 COMBINED APPROACH FOR DERIVING POLICY SCENARIOS 37

3.1 Overview 37

3.2 Scenario Concepts and Energy Statistics Databases 38

3.2.1 Scenario Concepts 38

3.2.2 Energy Statistics Data Basis 42

3.3 Application of a Linear Optimization Model 46

3.3.1 Advantages and Limitations of Optimization Models 46

3.3.2 Application of the IKARUS Optimization Model for Policy Scenarios 50

3.3.3 Cost Calculation in the IKARUS Optimization Approach 51

3.4 Expert Judgements of Sectoral Measure Impacts	53
3.4.1 General Procedure	53
3.4.2 Conversion Sector and Renewables	59
3.4.2.1 Preliminary remarks	59
3.4.2.2 Electricity and district heat	59
3.4.2.3 Renewables	60
3.4.3 Industry and Small-Scale Consumers	65
3.4.3.1 Preliminary remarks	65
3.4.3.2 Industry	68
3.4.3.3 Small-scale consumers	70
3.4.4 Households	72
3.4.4.1 Space heat	72
3.4.4.2 Electrical appliances and water heaters	75
3.4.5 Transport	83
3.4.5.1 Preliminary remarks	83
3.4.5.2 Impact of selected individual measures in the transport sector	84
3.4.5.3 Impacts of packages of measures in passenger and goods transport	88
3.5 Combining Sectoral Estimates Into Overall Scenarios	91

4 CONCLUSIONS 95
