

**Contents:**

<b>1 INTRODUCTION.....</b>	<b>1</b>
<b>1.1 Biological principles .....</b>	<b>1</b>
<b>1.2 Technical asymmetric catalysis.....</b>	<b>4</b>
<b>1.3 Transfer of biological principles to technical asymmetric catalysis .....</b>	<b>9</b>
<b>2 SCOPE AND OBJECTIVES .....</b>	<b>15</b>
<b>2.1 Graphical abstract of investigated systems .....</b>	<b>17</b>
<b>3 FIRST BIOLOGICAL PRINCIPLE: REACTION SEQUENCES .....</b>	<b>19</b>
<b>3.1 <i>In vivo</i> reaction sequences.....</b>	<b>21</b>
<b>3.1.1 Diastereoselective production of diols with resting cells.....</b>	<b>21</b>
<b>3.1.1.1 Production of Lactobacillus kefir.....</b>	<b>25</b>
<b>3.1.1.2 Batch synthesis.....</b>	<b>26</b>
<b>3.1.1.3 System investigations.....</b>	<b>27</b>
<b>3.1.1.4 Fed-batch operation.....</b>	<b>31</b>
<b>3.1.1.5 Development of a continuously operated process.....</b>	<b>34</b>
<b>3.1.1.6 Summary .....</b>	<b>42</b>
<b>3.2 <i>In vitro</i> reaction sequences by combination of biocatalytical steps .....</b>	<b>45</b>
<b>3.2.1 Diastereoselective production of diols with in vitro reaction sequences .....</b>	<b>45</b>
<b>3.2.1.1 BFD catalyzed enantioselective carboligation to (S)-2-hydroxy-1-phenylpropanone.....</b>	<b>49</b>
<b>3.2.1.2 BAL catalyzed enantioselective carboligation to (R)-2-hydroxy-1-phenylpropanone.....</b>	<b>61</b>
<b>3.2.1.3 ADH-catalyzed enantioselective reduction to all stereoisomers of 1-phenylpropane-1,2-diol.....</b>	<b>65</b>
<b>3.2.1.4 Diastereoselective production of vic-diols with a reaction sequence .....</b>	<b>66</b>
<b>3.2.1.5 Summary .....</b>	<b>69</b>
<b>3.2.2 Synthesis of polyols with in vitro multicatalyst systems .....</b>	<b>70</b>
<b>3.2.2.1 Optimizing the reaction selectivity .....</b>	<b>70</b>
<b>3.2.2.2 Genetic algorithm as tool for optimization of multi parameter systems .....</b>	<b>72</b>
<b>3.2.2.3 Optimization of the core 2 trisaccharide synthesis.....</b>	<b>75</b>
<b>3.2.2.4 Results of the optimization.....</b>	<b>77</b>
<b>3.2.2.5 Comparison to synthesis with two separated reaction steps .....</b>	<b>80</b>
<b>3.2.2.6 Overcoming problem of secondary hydrolysis by designing new reaction cascade .....</b>	<b>81</b>
<b>3.2.2.7 Summary .....</b>	<b>85</b>

<b>3.3 In vitro reaction sequences by combination of electrochemical with biocatalytical steps .....</b>	<b>87</b>
3.3.1 Electrochemical in situ generation of reactants.....	90
3.3.1.1 System investigations.....	93
3.3.1.2 Development of an electroenzymatic reactor with a three-dimensional electrode.....	95
3.3.1.3 Summary .....	98
<b>4 SECOND BIOLOGICAL PRINCIPLE: MACROMOLECULAR CATALYSTS... 99</b>	
<b>4.1 Direct hydrogenation with chemzymes .....</b>	<b>103</b>
4.1.1 Supply of hydrogen.....	107
4.1.2 Volume aerated membrane reactor .....	110
4.1.3 System characterization.....	112
4.1.4 Synthesis in the volume aerated membrane reactor.....	116
4.1.5 Summary .....	117
<b>4.2 Direct hydrogenation with enzymes .....</b>	<b>119</b>
4.2.1 Generation of NADPH.....	122
4.2.2 Analytics.....	123
4.2.3 System investigations.....	124
4.2.4 Continuous production of NADPH in the volume aerated membrane reactor	
129	
4.2.5 Regeneration of NADPH .....	130
4.2.6 Summary .....	134
<b>4.3 Transfer hydrogenation with chemzymes.....</b>	<b>135</b>
4.3.1 Synthesis of the chemzyme .....	136
4.3.2 System investigations.....	139
4.3.3 Operation and simulation of continuously operated reactors.....	153
<b>4.4 Transfer hydrogenation with enzymes.....</b>	<b>161</b>
4.4.1 Overcoming thermodynamic limitations in transfer hydrogenation .....	164
<b>4.5 Comparison of chemzymes to enzymes .....</b>	<b>169</b>
<b>5 DISCUSSION AND OUTLOOK .....</b>	<b>175</b>
<b>6 SUMMARY.....</b>	<b>181</b>
<b>7 LITERATURE.....</b>	<b>182</b>
<b>8 PUBLICATIONS &amp; PATENT OF PROF. DR. ANDREAS LIESE.....</b>	<b>201</b>
