

Contents

1. Introduction	5
2. Theory	7
2.1. Biotechnological Processes	7
2.1.1. Bioreactors	7
2.1.2. Modes of Operation	7
2.2. Modeling	9
2.2.1. Mechanistic and Black-Box Models	9
2.2.2. Macroscopic Modeling	10
2.2.3. Structured and Unstructured Models	10
2.3. A Model of a Fed-Batch Process	11
2.3.1. Mass Balance	11
2.3.2. Kinetics	12
2.4. Fitting Models to Experimental Data	17
2.4.1. Parameter Estimation	17
2.4.2. Parameter Accuracy	18
2.4.3. Accuracy of the Fitted Model	19
2.4.4. Jacobian in dynamic systems	21
2.5. Experimental Design	25
2.5.1. Experimental Design for Model Discrimination	26
2.5.2. Experimental Design for Parameter Estimation	36
2.5.3. Model Discrimination <i>and</i> Parameter Estimation	39
2.6. Optimization of Bioprocesses	40
2.7. L-valine Production in <i>Corynebacterium glutamicum</i>	41
3. Dynamic Modeling Framework	45
3.1. The Modeling Procedure	45
3.2. Parameter Estimation	47
3.3. Designing Experiments	48
3.3.1. Model Discriminating Design	48
3.3.2. Design for Parameter Estimation	49
3.3.3. Design an Optimized Production Process	50

3.4. Application: L-Valine Production Process Development	50
3.4.1. Designed Experiments	50
3.4.2. Preparation of Measured Data	54
3.4.3. Calculation of other Characteristic Values	56
4. Simulative Comparison of Model Discriminating Design Criteria	61
4.1. Setup	61
4.2. First Case: Fermentation	63
4.2.1. Prior Situation	63
4.2.2. Designed Experiments	65
4.2.3. Results	70
4.3. Second Case: Catalytic Conversion	74
4.3.1. Prior Situation	74
4.3.2. Experimental Designs	76
4.3.3. Results	82
4.4. Discussion and Conclusion	84
5. L-Valine Production Process Development	87
5.1. Material and Methods	87
5.1.1. Organism	87
5.1.2. Media	90
5.1.3. Fermentation	94
5.1.4. Analytics	97
5.2. Modeling Based Process Development	101
5.2.1. Preliminary Experiments	101
5.2.2. Initialization: Batch Data	102
5.2.3. Model Discriminating Experiment I	104
5.2.4. Intuitiv Discrimination between L-Isoleucine and Pantothenic Acid	110
5.2.5. Model Discriminating Experiment II	113
5.2.6. Optimized Process	116
5.3. Biological Information from Modeling Based Process Development	121
5.3.1. Modeling	121
5.3.2. By-products	122
5.4. Conclusions	129
Appendici	131
A. Nomenclature	133

B. Ratio between OD_{600} and Dry Weight.	139
C. The Influence of the Oxygen Supply.	141
D. Dilution for Measurement of Amino Acids by HPLC.	151
E. Models used in the First Model Discriminating Experiment.	153
F. Models used in the Second Model Discriminating Experiment.	161
G. Alternative Off-line Optimized Production Experiments	173
G.1. Total Volumetric Productivity	173
G.2. Overall Yield of Product on Substrate	174
Summary	177
Zusammenfassung	179
Acknowledgements	181
Bibliography	183
