1	Introduction	1
1.1	Control of the plasma by the edge ergodization	1
1.2	Description of magnetic field lines	2
1.3	Onset of ergodic zone of field lines	3
1.4	The DED and its operational regimes	4
1.5	Goals and a short description of the report	5
1.6	Bibliographic notes	5
2	DED coil system and magnetic perturbations	7
2.1	The DED arrangements	7
2.2	Basic distribution of current over coils	9
2.2.1	Current distribution for the 3:1 mode: DC operation	9
2.2.2	Current distribution for the 3:1 mode: AC operation	10
2.2.3	A coil configuration for the 6:2 mode: DC operation	12
2.2.4	A coil configuration for the 6:2 mode: AC operation	13
2.2.5	A coil configuration for the 12:4 mode: DC operation	14
2.2.6	A coil configuration for the 12:4 mode: AC operation	14
2.3	Density of DED current	16
2.3.1	Fourier expansion of the current density	17
2.3.2	Ideal coil configuration	18
2.3.3	Non-ideal coil configuration	18
2.4	Magnetic field perturbations	19
2.4.1	Cylindrical approximation	20
2.4.2	Toroidal corrections	22
3	Hamiltonian field line equations	25
3.1	Hamiltonian formulation of field line equations in a toroidal system	25
3.2	Field lines in axisymmetric tokamak equilibrium	26
3.2.1	Non-axisymmetric magnetic perturbations	28
3.2.2	Perturbation field in intrinsic coordinates	29

3.3	Mappings of field lines	29
3.3.1	The Hamilton–Jacobi method to construct mappings . . .	30
3.3.2	Mapping with a numerical interpolation of Hamiltonian	31
3.4	Models for the tokamak magnetic equilibrium	32
3.4.1	Equilibrium magnetic field with the Shafranov shift . . .	32
3.4.2	The safety factor profiles	34
3.5	Spectrum of Hamiltonian perturbations	36
3.5.1	Asymptotics of the transformation matrix elements $S_{m,m'}$	38
3.5.2	Asymptotic behavior of $H_{m,n}$	39
3.5.3	DED magnetic perturbation	42
3.5.4	Numerical determination of H_{mn}	42
3.6	Bibliographic notes on mapping methods	45
4	Properties of the ergodic and laminar zones	49
4.1	Formation of the ergodic zone	49
4.1.1	Qualitative estimations	49
4.1.2	The $m : n = 12 : 4$ operational mode	50
4.1.3	Variation of the ergodization level	51
4.1.4	The $m : n = 6 : 2$ operational mode	51
4.1.5	The $m : n = 3 : 1$ operational mode	53
4.2	Ergodic divertor as a chaotic scattering system	55
4.2.1	Basin boundary structure at the plasma edge: Laminar plots	56
4.2.2	Magnetic footprints	58
4.3	Diffusion of field lines	60
4.3.1	Global and local diffusion coefficients	61
4.3.2	Quasilinear diffusion coefficients	62
4.3.3	Numerical calculation of field line diffusion coefficients .	62
4.4	Lyapunov exponents and Kolmogorov lengths	66
4.4.1	Definition of Lyapunov exponent	66
4.4.2	Finite-time Lyapunov exponent	68
4.4.3	The Kolmogorov length	68
4.4.4	Numerical results	69
4.5	Experimental observation of the magnetic structure	72
5	The Gourdon code	77
5.1	Equilibrium calculation	77
5.1.1	Fixed boundary value problem	79
5.1.2	Semifree boundary value problem	80
5.1.3	Special equilibria	80
5.2	Fourier analysis of the perturbing magnetic field	81
5.3	Perturbation coils for the DED	81
5.3.1	Magnetic fields generated by the DED	82
5.3.2	Spectra	83

5.4	Poincaré plots	84
5.4.1	(m=12, n=4) configuration	84
5.4.2	(m=3, n=1 - configuration	84
A	Calculations of amplitudes and phases in Eq. (2.4)	87
A.1	The 3:1 operational mode	87
B	Current density of coils	89
B.1	Continuous current density	89
B.2	Nonideal coil configuration	90
C	Modified Bessel functions $I_m(z)$ and $K_m(z)$	93
D	Model of a current density profile $j(r)$ in the DED operation	95
E	Asymptotic estimation of the integral $S_{mm'}$ (3.44)	97
F	The calculation of the Jacobi matrix	101
