<b>1</b>	<b>From Pools and Fluxes to Titers and Rates</b>	<b>3</b>
<b>2</b>	<b><i>In vivo</i> Metabolic Dynamics after Pulse Stimulation: Tools and Results</b>	<b>9</b>
2.1	Motivation . . . . .	9
2.2	Rapid Sampling and Sample Preparation . . . . .	13
2.2.1	Rapid Sampling Devices . . . . .	14
2.2.2	Cell Quenching Approaches . . . . .	17
2.2.3	Metabolite Extraction . . . . .	19
2.3	<i>In vivo</i> Pool Analysis - <i>Metabolic Profiling</i> . . . . .	22
2.3.1	Reviewing <i>Metabolic Profiling</i> Approaches . . . . .	22
2.3.2	The Current LC-MS/MS Approach . . . . .	28
2.4	Developing MMT - the Metabolic Modeling Tool . . . . .	31
2.4.1	Software Overview . . . . .	32
2.4.2	The Metabolic Modeling Tool (MMT) . . . . .	33
2.5	Modeling Metabolism Dynamics: Aims and Pitfalls . . . . .	38
2.5.1	Modeling Constraints and Simplifying Assumptions . . . . .	38
2.5.2	Stimulus-Response Models . . . . .	40
2.5.3	Model Identification Problems . . . . .	42
2.6	Broaden the Scope: From Central Metabolism to Anabolic Pathways . . . . .	54
2.6.1	Basics of the Aromatic Amino Acid Pathway in <i>E. coli</i> Focusing on L-Phe Synthesis . . . . .	55
2.6.2	Preliminary Glucose Pulse Experiments . . . . .	62

2.6.3	<i>In vivo</i> Analysis of the Aromatic Amino Acid Pathway	71
2.7	Pulse Stimulation: Conclusions and Outlook . . . . .	87
<b>3</b>	<b>Serial <math>^{13}\text{C}</math> Flux Analysis Using the Sensor Reactor</b>	<b>91</b>
3.1	Motivation . . . . .	91
3.2	The Sensor Reactor Concept . . . . .	96
3.3	Technical Development . . . . .	98
3.3.1	Settling on <i>Corynebacterium glutamicum</i> . . . . .	98
3.3.2	Sensor Reactor Set-up . . . . .	100
3.3.3	Inoculation . . . . .	101
3.3.4	Master/Slave Mode . . . . .	104
3.3.5	Pulsing . . . . .	104
3.3.6	Cultivation Experiments . . . . .	106
3.3.7	Interim Summary: Sensor Reactor Development . . .	110
3.4	MFA for L-Lysine Producing <i>C. glutamicum</i> . . . . .	113
3.4.1	Analysis of the Growth Phase . . . . .	113
3.4.2	Analysis of the L-Lysine Production Phase . . . . .	123
3.4.3	Flux Map Comparison - Growth vs. Production Phase	133
3.5	MFA for L-Phenylalanine Producing <i>E. coli</i> . . . . .	135
3.5.1	Settling on L-Phenylalanine Producing <i>E. coli</i> . . .	135
3.5.2	Fermentation Experiments . . . . .	137
3.5.3	<i>MFA</i> Results . . . . .	140
3.5.4	Linear Programming . . . . .	145
3.5.5	Theoretical Fluxes vs. MFA Results . . . . .	147
3.5.6	Flux Sensitivity Analysis . . . . .	148
3.5.7	Working Hypothesis . . . . .	150
3.6	Sensor Reactor: Conclusions and Outlook . . . . .	151
<b>4</b>	<b>L-Phenylalanine Bioprocess Development</b>	<b>155</b>
4.1	Market Driven Motivation for L-Phenylalanine Production .	155
4.2	Access to L-Phenylalanine . . . . .	158
4.2.1	L-Phenylalanine Production . . . . .	158
4.2.2	<i>Metabolic Engineering</i> Targets . . . . .	161
4.3	Preliminary Studies . . . . .	167
4.3.1	Small-Scale Production Strain Characterization . . .	167
4.3.2	Statistical Analysis Based on PCA . . . . .	170
4.4	Fed-Batch Process Development . . . . .	180
4.4.1	Tyrosine and Glucose Control . . . . .	180
4.4.2	PTS <sup>-</sup> L-Phe Producer . . . . .	197
4.5	<i>ISPR</i> Process Development . . . . .	203
4.5.1	Basics of Reactive Extraction . . . . .	206
4.5.2	Identifying the Reactive Extraction System . . . . .	209
4.5.3	Membrane Based Reactive Extraction on Pilot Scale	224
4.5.4	Total Process Modeling . . . . .	228
4.5.5	Reactive Extraction with Centrifugal Extractors . .	242

4.6 L-Phenylalanine Process Development: Conclusions and Outlook . . . . .	256
<b>5 Pyruvate Bioprocess Development</b>	<b>261</b>
5.1 Introduction . . . . .	261
5.2 Experimental Conditions . . . . .	266
5.3 Development of the Fermentation Process . . . . .	268
5.3.1 Controlled Acetate Feeding . . . . .	268
5.3.2 Continuous Fermentation with Cell Retention. . . . .	274
5.3.3 Repetitive Fed-Batch Approach . . . . .	275
5.4 ISPR Approach Using Electrodialysis . . . . .	279
5.4.1 Preliminary Separation Experiments . . . . .	279
5.4.2 Integration of Electrodialysis into the Fed-Batch Process . . . . .	281
5.5 Pyruvate Process Development: Conclusions and Outlook . . . . .	287
<b>6 Summary</b>	<b>289</b>
<b>References</b>	<b>295</b>
<b>A Material and Methods</b>	<b>331</b>
A.1 Strains and Feedstocks . . . . .	331
A.1.1 <i>E. coli</i> Strains of the 'L-Phe Project' . . . . .	331
A.1.2 Pyruvate Producing <i>E. coli</i> Strains . . . . .	335
A.1.3 <i>C. glutamicum</i> . . . . .	335
A.2 Medium and Cultivation Conditions . . . . .	336
A.2.1 <i>E. coli</i> Strains of the 'L-Phe Project' . . . . .	336
A.2.2 <i>C. glutamicum</i> MH20-22B . . . . .	337
A.2.3 Pyruvate Producing <i>E. coli</i> . . . . .	337
A.3 Analytical Methods . . . . .	339
A.3.1 Sampling During Sensor reactor Fed-batch Experiments with <i>C. glutamicum</i> . . . . .	339
A.3.2 Standard Analysis of <i>C. glutamicum</i> Fermentations .	339
A.3.3 Standard Analysis of <i>E. coli</i> Fermentations . . . . .	339
A.3.4 AAA Pathway Intermediates in the Fermentation Supernatant . . . . .	340
A.3.5 $^1\text{H}$ -NMR of <i>C. glutamicum</i> Fermentation Supernatants	340
A.3.6 Measurement of L-Phe Enrichments in the Supernatant	340
A.3.7 Preparation of Proteinogenic Amino Acids . . . . .	341
A.3.8 Isotopomer Analysis in the Proteinogenic Amino Acids of <i>C. glutamicum</i> . . . . .	341
A.3.9 Fine Structure of NMR Signals Used for <i>C. glutamicum</i> Growth Analysis . . . . .	342
A.3.10 Fine Structure of NMR Signals Used for Analysis of L-lysine Production in <i>C. glutamicum</i> . . . . .	346

A.3.11 PEP Carboxykinase Assay . . . . .	349
A.3.12 DAHP Activity Measurements . . . . .	349
A.3.13 2D-NMR Measurements for Supernatant Analysis . . . . .	350
A.3.14 Isotopomer Labeling Used for MFA with <i>E. coli</i> . . . . .	350
A.3.15 Reactive Extraction with Separation Funnels . . . . .	350
<b>A.4 Technical Set-up . . . . .</b>	<b>352</b>
A.4.1 Sensor Reactor . . . . .	352
A.4.2 <i>E. coli</i> Fermentations . . . . .	353
A.4.3 On-line Glucose Control . . . . .	353
A.4.4 Electrodialysis . . . . .	354
<b>A.5 Sensor Reactor Labeling . . . . .</b>	<b>355</b>
A.5.1 <i>C. glutamicum</i> in Batch Process . . . . .	355
A.5.2 Correction for Incomplete Labeling of Biomass . . . . .	356
A.5.3 Labeling Non-Growing <i>C. glutamicum</i> in a Fed-Batch Process . . . . .	358
A.5.4 Labeling Non-Growing <i>E. coli</i> in a Fed-Batch process . . . . .	358
A.5.5 Correction for $^{13}\text{C}$ Memory Effects in the Culture Supernatant . . . . .	359
