

Contents

1.	<u>Introduction</u> -----	1
2.	<u>Electrons in Periodic Crystals</u> -----	5
	2.1 The Crystal Potential-----	5
	2.2 Bloch Waves-----	8
	2.3 Complex \underline{k} , E and Symmetries of $E_{\nu}(\underline{k})$ -----	12
	2.4 Band Structure for Complex \underline{k} (One Dimension)-----	18
	2.5 Band Structure for Complex \underline{k} (3 Dim. and $V+V^{\dagger}$)-----	25
	2.6 Two-Beam Case-----	31
	2.7 Some Multiple Beam Cases-----	39
	2.8 Orthogonality on the Dispersion Surface-----	46
3.	<u>Diffraction of Electrons by Ideal Crystals</u> -----	50
	3.1 Wavefields in the Vacuum and in the Crystal-----	50
	3.2 Scattering by a Crystal Slab I-----	54
	3.3 Scattering by a Crystal Slab II-----	59
	3.4 Current Conservation-----	64
	3.5 Symmetrical Laue-Case-----	66
	3.6 Symmetrical Bragg-Case-----	73
4.	<u>Single Scattering Matrices and Neutron Scattering</u> -----	78
	4.1 Multiple Scattering with Single Scattering Matrices-----	78
	4.2 Scattering by Muffin-Tin Potentials-----	34
	4.3 Diffraction of Neutrons-----	91

5. <u>Dynamical Diffraction of X-Rays</u> -----	102
5.1 Fundamental Equations for X-Ray-Diffraction-----	102
5.2 Current, Boundary Conditions, etc.-----	108
References-----	115
Figures-----	118
