

## 0 Contents

0	Contents.....	vii
0.1	Figures and Tables.....	xii
0.1.1	Figures.....	xii
0.1.2	Tables.....	xiv
0.2	Abstract.....	xvii
1	Introduction.....	1
1.1	Fuel supply for the transport sector.....	1
1.2	Global situation of methanol.....	3
1.3	Summary of Chapter 1.....	6
2	Possible energy carriers for road traffic.....	9
2.1	Costs and emissions.....	10
2.2	Summary of Chapter 2.....	13
3	Methanol and alternative fuels for road traffic.....	14
3.1	Methanol for MTBE production.....	17
3.2	M85 for direct-injection combustion engines.....	17
3.3	Methanol for fuel cells with reformers.....	19
3.4	Methanol for fuel cells without reformers (DMFC).....	25
3.4.1	Fuel for direct fuel cells.....	26
3.4.2	Principle of the DMFC.....	27
3.4.3	Development areas.....	28
3.4.3.1	Electrode structure.....	30
3.4.3.2	New membrane materials.....	31
3.4.3.3	Selective catalysts.....	32
3.4.4	Applications.....	33
3.4.5	Outlook.....	34
3.5	Methanol for fuel cell powered passenger cars in the USA.....	34
3.6	Summary of Chapter 3.....	35
4	Methanol production.....	36
4.1	Methanol from natural gas.....	37
4.1.1	Synthesis gas production.....	37
4.1.2	Methanol synthesis.....	38
4.1.3	Life cycle cost and energy balance.....	39

4.2	Methanol from coal .....	41
4.3	Summary of Chapter 4 .....	43
5	Synthesis gas .....	44
5.1	Applications .....	44
5.1.1	Principles .....	44
5.1.2	Natural gas conversion .....	44
5.1.3	Coal conversion .....	46
5.2	Synthesis gas technologies .....	47
5.2.1	Steam reforming .....	48
5.2.2	CO <sub>2</sub> reforming .....	51
5.3	Synthesis gas for methanol .....	53
5.3.1	Stoichiometry .....	53
5.3.2	Choice of technology .....	54
5.4	Direct conversion .....	55
5.5	Summary of Chapter 5 .....	56
6	Process engineering of methanol synthesis .....	58
6.1	Methanol production technology .....	58
6.2	Synthesis gas preparation .....	59
6.2.1	One-step reforming .....	60
6.2.2	Two-step reforming .....	61
6.2.3	Autothermal reforming .....	63
6.2.4	Gas-heated reforming .....	64
6.2.5	Choice between reforming technologies .....	65
6.2.6	Gasification .....	66
6.2.7	Co-production of methanol in ammonia plants .....	67
6.3	Methanol synthesis .....	67
6.3.1	Thermodynamics .....	67
6.3.2	Catalysts .....	68
6.3.3	Reaction mechanism .....	68
6.3.4	Kinetics .....	69
6.3.5	By-products .....	70
6.3.6	Design of methanol synthesis reactors .....	71
6.3.6.1	Quench reactor .....	71
6.3.6.2	Adiabatic reactor .....	72

6.3.6.3	Boiling water reactor.....	72
6.3.6.4	Gas-cooled reactor .....	72
6.3.6.5	Integrated gas-cooled reactor .....	73
6.3.6.6	Radial flow reactor.....	73
6.3.6.7	Slurry phase reactor .....	73
6.3.7	Condensing methanol .....	74
6.4	Methanol purification .....	74
6.4.1	Low-grade methanol .....	74
6.4.2	High-grade methanol.....	75
6.4.2.1	Two-column distillation.....	75
6.4.2.2	Three-column distillation .....	75
6.5	Dimethyl ether technologies .....	76
6.5.1	Methanol dehydration .....	77
6.5.2	Combined synthesis .....	77
6.5.3	Catalysts .....	78
6.5.3.1	Dehydration catalysts .....	79
6.5.3.2	Catalysts used in integrated technologies.....	79
6.6	Methanol reforming in water gas shift reactors .....	80
6.6.1	Thermodynamics .....	80
6.6.2	The kinetics of methanol reforming in low-temperature water gas shift reactors .....	81
6.6.3	Industrial applications .....	82
6.6.4	Economic considerations .....	84
6.6.5	Conclusions.....	85
6.7	Use of methanol and DME in solid oxide fuel cell systems .....	85
6.7.1	Introduction .....	85
6.7.2	Methanol-based SOFC systems with methanol methanation.....	86
6.8	Summary of Chapter 6 .....	88
7	Methanol technologies .....	89
7.1	Natural gas-to-methanol.....	89
7.1.1	The concept .....	89
7.1.2	Synthesis gas production .....	89
7.1.3	Autothermal reforming .....	90

7.1.4	Combined reforming.....	90
7.1.5	Methanol production.....	92
7.1.6	Methanol distillation .....	95
7.1.7	Evaluation of economic efficiency .....	95
7.2	Dimethyl ether .....	96
7.2.1	Production process.....	97
7.2.2	Evaluation of economic efficiency .....	98
7.3	Methanol-to-hydrogen .....	100
7.4	Synthetic fuels .....	102
7.5	Summary of Chapter 7 .....	106
8	Hazard potentials of methanol .....	109
8.1	Safety.....	110
8.2	Environmental impacts due to leakages .....	111
8.3	Human health .....	111
8.4	Filling stations.....	112
8.5	Comparison with possible direct fuel cell fuels.....	112
8.6	Summary of Chapter 8 .....	115
9	Methanol for the chemicals market .....	116
9.1	Global production capacities.....	116
9.2	Global demand for methanol .....	117
9.3	Prospects for global methanol demand.....	119
9.4	Methanol trading .....	120
9.5	Methanol prices .....	122
9.6	Future development.....	123
9.7	Summary of Chapter 9 .....	124
10	Biofuel projects .....	125
10.1	Overview.....	125
10.2	Production paths for biofuels .....	126
10.3	Motivation for the use of biomass as an energy carrier .....	128
10.4	Status of biogenic methanol production .....	129
10.5	EU proposal for biofuel market launch .....	130
10.6	Energy crops in the EU: necessary agricultural areas .....	130
10.7	Biomass from waste and biogenic residues for fuel production .....	131

10.8	EU resources for fuel production from renewables .....	133
10.9	Fuel production costs .....	133
10.10	Biomass projects .....	135
10.11	Summary of Chapter 10 .....	136
11	Special aspects .....	137
11.1	Fuel cells for portable applications.....	137
11.2	Ban on MTBE .....	138
11.3	Berlin methanol fuel cell project .....	139
11.4	Summary of Chapter 11 .....	142
12	Summary .....	143
13	Literature.....	146
13.1	Literature used.....	146
13.2	Further literature .....	164
14	Annex.....	166
14.1	Supplementary tables .....	166
14.2	Abbreviations, explanations, conversions .....	168
14.2.1	Abbreviations .....	168
14.2.2	Definitions / explanations.....	171
14.2.3	Chemical compounds.....	176
14.2.4	Specification of quantities .....	177
14.2.5	Conversion of units .....	177
14.2.6	Estimation of units .....	177
15	Keywords.....	178
