

TABLE OF CONTENTS

LIST OF ACRONYMS	7
1. INTRODUCTION	11
2. CURRENT STATUS AND PROSPECTIVE MARKETS FOR HYDROGEN.....	15
2.1. Current and Future Demand of Hydrogen and Transport Fuel.....	15
2.1.1. Stationary.....	16
2.1.2. Transport	18
2.1.3. Summary of Potential Hydrogen Consumers and Nuclear Requirements	21
2.1.4. Transition Scenarios	22
2.2. Current Hydrogen Production Methods and Efficiencies	24
2.2.1. Steam/CO ₂ Reforming of Natural Gas	24
2.2.2. Partial Oxidation and Autothermal Reforming of Hydrocarbons.....	27
2.2.3. Gasification of Coal	31
2.2.4. Coal Liquefaction for Transportation Fuel Production	34
2.2.5. Water Splitting by Low Temperature Electrolysis	35
2.2.6. Others.....	38
2.3. Large-Scale vs. Small-Scale and Centralized vs. Decentralized Production	40
2.4. Electrolytic Hydrogen Production and Present Grid Conditions	42
2.5. Synergism of Electricity & Hydrogen in the Long Term	47
2.6. Alternative Transportation Fuels	49
3. NUCLEAR HYDROGEN PRODUCTION TECHNOLOGIES	53
3.1. The Nuclear Reactor as Heat and Electricity Source	53
3.2. The Intermediate Heat Exchanger as Coupling Component.....	56
3.2.1. Concept of an Intermediate Heat Exchanger.....	56
3.2.2. Development and Testing of IHX in Germany.....	57
3.2.3. Testing of the Japanese IHX in the HTTR.....	66
3.2.4. Conceptual Design of IHX for the US H ₂ -MHR	68
3.2.5. IHX Designs Considered in the ANTARES Concept in France	70
3.3. Nuclear Steam Reforming.....	72
3.3.1. Concept and Feasibility of a Nuclear Steam Reformer	72
3.3.2. The German Approach of Helium-Heated Steam Reforming	74
3.3.3. The Japanese Approach of Nuclear Steam Reforming	82
3.4. Thermochemical (Hybrid) Cycles.....	91
3.4.1. Overview of Thermochemical Cycles.....	91

3.4.2. The Sulfur-Iodine Cycle	93
3.4.3. The Westinghouse (Hybrid S) Cycle.....	97
3.4.4. UT-3 Cycle.....	99
3.4.5. Other Approaches.....	101
3.4.6. Limits of Number of Reactions and Separation Energy Cost.....	105
3.4.7. Chemical Elements and Compounds Involved in Thermochemical Cycles	106
3.5. High Temperature Electrolysis	108
3.5.1. High Temperature Electrolysis Versus Alkaline Electrolysis.....	108
3.5.2. Main Technological Issues.....	113
3.6. Key Factors for Innovative H ₂ Production Processes	114
3.6.1. Efficiency	114
3.6.2. Heat Matching with Heat Source	117
3.6.3. Heat Exchangers	119
3.6.4. Final Remarks	120
3.7. Nuclear Hydrogen R&D Projects	121
3.7.1. France	121
3.7.2. Japan.....	123
3.7.3. Korea.....	125
3.7.5. Russia.....	127
3.7.6. USA.....	128
3.8. Outlook	132
4. SAFETY ISSUES AND REGULATORY FRAMEWORK	135
4.1. Safety Considerations in a Process Heat HTGR	135
4.1.1. Identification of Hazard Sources.....	135
4.1.2. Tritium Transportation.....	136
4.1.3. Thermal Turbulences in the Steam Reforming System.....	142
4.1.4. Hazards in Electrolyzers.....	144
4.1.5. Hazards in Thermochemical Cycles	145
4.1.6. Explosion Hazards.....	145
4.2. Licensing Requirements	152
4.2.1. Safety Features of HTGRs	152
4.2.2. Definition of Safety Approach	153
4.2.3. Key Licensing Issues.....	154
5. MARKET POTENTIAL & ECONOMIC ASSESSMENT.....	155

5.1. Introduction.....	155
5.2. Rollout Strategy for Hydrogen Production.....	156
5.3. Economic Comparisons and Benefits of Nuclear Heat Utilization.....	161
6. ROADMAP	171
7. REFERENCES	177
ACKNOWLEDGEMENT	185
