Contents	i
Introduction	vii
I Theory	1
1 Basic properties of Josephson junctions	3
1.1 Superconductivity	3
1.2 The Josephson Relations	4
1.2.1 Types of Josephson junctions	6
1.3 Tunneling of Cooper pairs and quasiparticles	6
1.3.1 Resistively and Capacitively Shunted Junction model	8
1.3.2 Temperature dependence of j_c in SIS and SNS junctions	10
1.3.3 Washboard potential	10
1.4 Josephson junction in magnetic field	11
1.4.1 Sine-Gordon-model	13
1.5 Excitation in long Josephson junctions	15
1.5.1 Zero Field steps (ZFS)	16
1.5.2 Fiske steps	17
1.6 Shapiro steps	17
2 JJs with ferromagnetic barrier	18
2.1 The π state	18
2.1.1 Proximity effect in F-layer	19
2.1.2 Fulde-Ferrell-Larkin-Ovchinnikov (FFLO) state	19
2.2 Microscopic origin of π shift	20
2.2.1 Itinerant magnets	20
2.2.2 Andreev bound states in SNS and SFS junctions	22
2.3 Theory of π junctions	24
2.3.1 Josephson effect in the SFS/SIFS sandwich	25
2.3.2 Spontaneous supercurrent in π coupled loop	27
2.3.3 Critical temperature T_c of SF multilayers	28
2.4 Experiments with SFS/SIFS Josephson junctions	29
2.5 Advantages of π coupled SIFS junctions	31
2.6 Higher harmonics: $\sin 2\phi$ component	32

CONTENTS

3 Fractional vortices in 0–π JJs	33
3.1 Sine-Gordon equation including 0– π phase boundaries	33
3.2 Integer and semi-integer fluxons	34
3.3 Short and long 0– π JJs	35
3.3.1 Energy of symmetric and asymmetric 0– π JJs	35
3.3.2 Spontaneous flux in short 0– π JJs	36
3.3.3 0– π JJ in magnetic field	37
3.4 Bias current and semi-integer fluxons	38
3.4.1 Semi-integer Zero Field steps	39
3.5 Realization of 0– π junctions	40
3.5.1 YBa ₂ Cu ₃ O ₇ – Nb ramp zigzags	41
3.5.2 Artificial 0– κ junctions	41
3.5.3 SFS/SIFS Josephson junctions	42
3.6 Current status of 0– π SFS/SIFS junctions	43
II Experimental results	47
4 Sample preparation	49
4.1 Sputter deposition	49
4.2 Multilayer deposition	50
4.3 Oxidation process of tunnel barrier	52
4.4 Anodic oxidation process	53
4.5 Patterning	54
4.5.1 Idle region and capacitance	55
4.6 SIFS junctions with step in the F-layer	57
4.6.1 Patterning of step in the F-layer	58
4.6.2 Structural analysis of the step	59
5 Ferromagnetic NiCu alloys	61
5.1 Theory of NiCu alloys	61
5.1.1 Very thin NiCu films	62
5.2 Characterization of Ni ₆₀ Cu ₄₀	62
5.2.1 Stoichiometry	62
5.2.2 Electric properties	63
5.2.3 Magnetic properties	64
5.2.4 Calculation of remanent magnetization in NiCu films	66
6 0 and π coupled Josephson junctions	68
6.1 SIS junctions	69
6.1.1 Anodization spectroscopy	69
6.2 SIS junctions formed at various oxidation exposures	70
6.2.1 Proximity effect on aluminium	72
6.2.2 Stewart-McCumber parameter β_c	73
6.2.3 Temperature dependence of IVC	73
6.2.4 Magnetic field diffraction pattern	74
6.3 SIFS junctions with Ni ₆₀ Cu ₄₀ alloy	75

 CONTENTS

6.3.1	SIFS and SINFS junctions	76
6.4	IVC of JJs with thin F-layer	81
6.4.1	Temperature dependence of IVC	84
6.5	F-layer thickness dependence of SINFS junctions	85
6.5.1	Critical current	85
6.5.2	Stewart-McCumber parameter β_c	87
6.5.3	Transparency parameters	87
6.6	$I_c(H)$ of JJs with ferromagnetic interlayer	88
6.6.1	$I_c(H)$ as function of T and d_F	89
6.7	Fiske steps in SIFS JJs	90
6.8	Temperature dependence of 0 and π SINFS junctions	92
6.8.1	Temperature dependence of I_c and β_c	93
6.8.2	Temperature induced 0 to π transition	94
6.9	Upper limit of j_c for π coupled JJs	96
7	0, π and 0–π SIFS JJs	98
7.1	JJ with step in the F-layer	99
7.1.1	Fabrication of step in the F-layer	99
7.1.2	Quality of the etched junctions	100
7.2	0– π SIFS JJs	101
7.2.1	0, π and 0– π Josephson junctions	102
7.3	Physics of 0– π JJs	104
7.3.1	Ground state diagram	104
7.3.2	$I_c(H)$ dependences	107
7.3.3	Remanent magnetization in short 0– π JJ	108
7.3.4	Discussion of experimental $I_c^{0-\pi}(H)$	109
7.3.5	Increase of minimum in $I_c^{0-\pi}(H)$	110
7.4	Zero Field steps in 0– π and 0, π JJs	111
III	Appendix	113
A	LTSEM measurements on SIFS junctions	115
A.1	LTSEM on SIFS junctions	116
A.2	SIFS JJ with very thin F-layer in magnetic field	118
A.3	Elliptical and circular SINFS JJs	118
A.3.1	Elliptical junction	120
A.3.2	Circular junction	122
B	Quantum states of π junction	124
B.1	π JJ in low temperature limit	124
B.1.1	Current ramp experiments	125
B.2	Escape temperature measurements	126
B.3	Microwave spectroscopy	126
B.3.1	Spectroscopic determination of ω_{p0} , I_{c0} and C	127
C	List of symbols	130
