PREFACE

A FUNDAMENTALS

A1 Interaction of Radiation with Matter:

Part I: Neutrons and Electrons

Rudolf Zeller

Part II: Light and Electrons

Arno Schindlmayr

A2 Structure of Matter: Arrangement of Atoms and Molecules in Crystals, Glasses, and Liquids

Gernot Heger

A3 Electronic Structure of Matter: Basics and DFT

Gustav Bihlmayer

A4 Electronic Structure of Matter: Electronic Correlations

Erik Koch

A5 Electronic Structure of Matter: Reduced Dimensions

Stefan Blügel

A6 Electronic Structure of Matter: Phonons, Magnons, and Excitations

Matthias Buchmeier

A7 Correlations and Response of Matter to Probes

Reiner Zorn

B PRIME TECHNIQUES AND ADVANCED INSTRUMENTATION

B1 Neutron Sources and Instrumentation: Overview

Dieter Richter

B2 Synchrotron Radiation Sources and Beamlines: Overview

Stefan Cramm

B3 Advanced Nanoanalysis in Transmission Electron Microscopy: Overview

Werner Grogger et al

B4 Scanning Probe Microscopy: Overview

Philipp Ebert

C MICROSCOPIC TECHNIQUES: FUNDAMENTALS AND APPLICATIONS

- C1 Aberration-Corrected High-Resolution Transmission Electron Microscopy
Markus Lentzen
- C2 Focal-Series Reconstruction in HRTEM: Fundamentals and Applications
Andreas Thust
- C3 Electron Holography using Aberration Corrected TEM: Towards the Frontiers of Materials Characterisation
Michael Lehmann
- C4 Fundamentals and Applications of HAADF STEM
Lothar Houben
- C5 High Resolution Electron Tomography
Paul Midgley
- C6 Electron Emission and Photoemission Microscopy
Claus M Schneider
- C7 LEEM and Spin Polarized LEEM
Salia Cherifi
- C8 Piezoresponse Force Microscopy
Krzysztof Szot

D SCATTERING TECHNIQUES: FUNDAMENTALS AND APPLICATIONS

- D1 Atomic and Magnetic Structures in Crystalline Materials: Neutron and X-Ray Scattering
Thomas Brückel
- D2 Magnetic Fluctuations: Polarised Neutron Scattering
Werner Schweika
- D3 Magnetic and Lattice Excitations: Neutron and X-Ray Spectroscopies
Jörg Voigt
- D4 Thin Film Systems: Scattering under Grazing Incidence
Ulrich Rücker and Emmanuel Kentzinger
- D5 Structure of Soft Matter: Small Angle Scattering
Henrich Frielinghaus
- D6 Soft Matter Dynamics: Neutron Spin Echo Spectroscopy and X-Ray Correlation Spectroscopy
Michael Monkenbusch
- D7 Orbital and Charge Order: Resonant X-Ray Scattering
Yixi Su

E SPECTROSCOPIC TECHNIQUES: FUNDAMENTALS AND APPLICATIONS

- E1 High Spatial and High Energy Resolution Electron Energy-Loss Spectroscopy: Fundamentals and Applications to Nanostructured Materials
Thomas Walther
- E2 Electron Energy Loss Spectroscopy
Lutz Baumgarten
- E3 Complex Oxides and Nanostructured Materials
Ulrich Poppe
- E4 Aberration-Corrected Low-Voltage Electron Spectro-Microscopy for Extended Surface Studies
Thomas Schmidt and Eberhard Umbach
- E5 Terahertz Spectroscopies with High- T_c Josephson Junctions
Yuri Divin
- E6 Light Emission Spectroscopy with the STM
Niklas Nilius
- E7 Spatially Resolved Raman-Spectroscopy
Andreas Rüdiger
- E8 Core and Valence Level Photoemission
Charles S Fadley
- E9 X-Ray Absorption Spectroscopy
Paul Bechthold
