Abstract	4
Zusammenfassung	5
1. Introduction	6
1.1 Soil temperature and its dynamics	6
1.2 Plant response to soil temperature.....	9
1.3 Challenges in research on plant-soil temperature interactions.....	11
1.4 Aim of this study	12
2 Materials & Methods	14
2.1 Plant material.....	14
2.2 Growth conditions	14
2.3 Measurement of root temperature effects on plant structure.....	17
2.3.1 Growth system	17
2.3.2 Experimental design	19
2.3.3 Data analyses	20
2.4 Measurement of root temperature effects on root proliferation	23
2.4.1 Growth system.....	23
2.4.2 Experimental protocol	23
2.5 Measurement of root temperature effects on nutrient uptake kinetics of barley.....	24
2.5.1 Growth system	24
2.5.2 Experimental design	25
2.5.3 Data analyses	26
2.6 Determining the influence of root temperature & plant structure on nutrient uptake..	27
2.6.1 Experimental design	27
2.6.2 Data analyses	28
2.7 Measuring compounds of the nitrogen metabolism	28
2.8 Statistics	29
3 Results	31
3.1 Plant development & plant growth.....	31
3.1.1 Germination	31
3.1.2 Plant development stages.....	31
3.1.3 Leaf structure	33
3.1.4 Biomass of plants compared at the same age	34
3.1.5 Summary.....	35
3.2 Root morphology of plants compared at the same age	36
3.2.1 Root mass distribution with depth	36
3.2.2 Root surface area distribution with depth.....	37

3.2.3	Root length distribution with depth	39
3.2.4	Root tissue density & root diameter	40
3.2.5	Root architecture.....	42
3.2.6	Root elongation.....	44
3.2.7	Summary.....	45
3.3	Carbon and nitrogen in plants compared at the same age	46
3.3.1	Carbon content and partitioning	46
3.3.2	Nitrogen content and partitioning.....	48
3.3.3	Nitrogen metabolism	51
3.3.3.1	Nitrate in plants	52
3.3.3.2	Free amino acids in plants.....	52
3.3.3.3	Proteins in plants	54
3.3.4	Summary.....	55
3.4	Root temperature effects and the variation of plant development stage or age	55
3.4.1	Shoot and root mass.....	56
3.4.2	Root morphology of plants compared at the same development stage.....	58
3.4.3	C and N in plants compared at the same development stage.....	60
3.4.4	Summary.....	61
3.4.5	Conclusions for interpretation of results obtained with plants compared at the same age	62
3.5	Nutrient uptake.....	63
3.5.1	Nitrogen uptake	63
3.5.1.1	N uptake affected by root temperature.....	63
3.5.1.2	N uptake affected by root temperature and structure	65
3.5.2	Magnesium uptake.....	67
3.5.2.1	Mg uptake affected by root temperature	67
3.5.2.2	Mg uptake affected by root temperature and structure	69
3.5.3	Summary.....	71
4	Discussion	72
4.1	Vertical temperature gradients in soil cause responses at whole plant level.....	72
4.1.1	Variation in time until germination	72
4.1.2	Accelerated plant development.....	73
4.1.3	Benefits in plant growth.....	74
4.1.4	Changes in carbon and nitrogen partitioning within the plant.....	76
4.1.4.1	Carbon allocation	76
4.1.4.2	Nitrogen allocation.....	77
4.1.4.3	Differences in N metabolism.....	79
4.2	Vertical temperature gradients in soil cause changes in plant morphology	80
4.2.1	Changed leaf structure	80
4.2.2	Root system plasticity.....	81
4.2.2.1	Root length.....	82
4.2.2.2	Rooting depth	85
4.3	Vertical temperature gradients in soil influence nutrient uptake and translocation in plants	86

4.3.1	Direct effects of root temperature on nutrient uptake and translocation	86
4.3.1.1	Nitrogen.....	87
4.3.1.2	Magnesium	88
4.3.2	Nutrient uptake and translocation of plants morphologically adapted to root temperatures	89
4.3.2.1	Nitrogen.....	90
4.3.2.2	Magnesium.....	91
4.3.3	Nutrient uptake in dependence of root depth.....	91
4.4	Plant age and development stage influence plant response to soil temperature.....	92
5	The significance of vertical soil temperature gradients – conclusion & outlook..	95
5.1	Conclusion.....	95
5.2	Outlook.....	96
