

Contents

I	Introduction	1
1	Introduction	3
1.1	Spintronics	4
1.2	Fabrication of Ordered Nanostructures	8
1.3	Characterization of Nanostructures	11
II	Theory	15
2	Scattering Methods: Introduction to Theory	17
2.1	Introduction	17
2.2	Classical and Quantum Scattering	17
2.3	The Cross Section	20
2.4	Born Approximation	22
2.5	Distorted Wave Born Approximation	23
2.6	Properties of X-rays and Neutrons	24

2.6.1	Scattering of X-rays: Thomson Scattering	26
2.6.2	Scattering of Neutrons	27
3	Scattering Methods: Different Geometries	31
3.1	Scattering Geometries	31
3.1.1	Small Angle Scattering	31
3.1.2	Reflectometry	32
3.1.3	Grazing Incidence Small Angle Scattering	42
3.2	GISAS in Terms of DWBA	46
3.3	Smearing Effects	60
III	Experimental results	77
4	Sample Preparation and Instruments	79
4.1	BW4, Small Angle X-ray Scattering Beamline	80
4.2	D22, Small Angle Neutron Scattering Setup	82
4.3	KWS-2, Small Angle Neutron Scattering Setup	83
4.4	HADAS, Neutron Reflectometer	85
4.5	Sample Preparation	87
4.5.1	Self-organized Polymer Films	87
4.5.2	Interference Lithography	87
4.5.3	Ion Beam Etching	89

CONTENTS

4.6 Atomic Force Microscopy	90
5 Results and Discussion	95
5.1 Phase Separated Diblock Copolymers	95
5.1.1 Diblock Copolymers: Lamellar Phase	96
5.1.2 Diblock Copolymers: Cylindrical Phase	106
5.1.3 Diblock Copolymers: Spherical Phase	128
5.1.4 Ozonating	133
IV Appendix	139
A Resolution Function Parameters	141
B Reflectivity: Optical Approach	149
C List of Frequently Used Symbols and Abbreviations	153
Outlook	155
Bibliography	158
