

List of Content

Executive Summary	5
1. Introduction	11
2. Sustainability Challenges.....	14
2.1 Sustainability concept and challenges for energy systems.....	14
2.2 Concept for energy technologies, in particular for nuclear energy	15
2.3 Sustainability indicators for comparative technology assessment	16
3. Nuclear Fuel Cycle Options.....	19
3.1 Introduction	19
3.2 The Principals of Partitioning and Transmutation	19
3.3 Technical Elements of P&T Scenarios.....	21
3.4. Status and inventory of nuclear facilities	23
3.4.1 Uranium mines	23
3.4.2 Uranium conversion facilities	24
3.4.3 Uranium enrichment facilities.....	25
3.4.4 Fuel fabrication	25
3.4.5 Nuclear power plants.....	26
3.4.6 Spent fuel storage facilities	27
3.4.7 Waste repositories	28
3.5 Reprocessing techniques and facilities.....	29
3.5.1 Hydrometallurgical processes	30
3.5.2 Pyrochemical processes.....	31
3.6 Definition of key parameters for processes and technologies.....	32
3.6.1 Inventory of processes and technologies under study	32
3.6.2 Definition of key parameters.....	37
4. Back-End of the Fuel Cycle	39
4.1 Basic steps in radioactive waste management.....	39
4.2 Classification of radioactive waste.....	40
4.3 Waste disposal.....	43
4.3.1 Disposal of short- lived long lived ILW.....	43
4.3.2 Disposal of long-lived ILW.....	44
4.3.3 Geological disposal of HLW	45
5. Fuel Cycle Scenarios	48
5.1 Overview	48
5.2 Basic scenarios	50
5.2.1 Scenario A1: Reference scenario - once through fuel cycle with Gen III reactors.....	50
5.2.2 Scenario A2: Near term scenario - mono-recycling of Pu in Gen III reactors.....	52
5.2.3. Scenario A3: Multirecycling of Pu in fast reactors	55
5.2.4. Scenario B1: Fast neutron GEN IV scenario	56
5.2.5. Scenario B2: Simplified double-strata scenario with LWR and ADS	58
5.2.6. Scenario B3: Simplified double-strata scenario with LWR and ADS	59
5.3 Scenario calculations	60
5.3.1 Introduction	60
5.3.2 Preliminary benchmark	62
5.3.3 Equilibrium scenarios.....	63
5.3.4 Variant scenarios.....	65
5.3.5 Transition scenarios.....	70
5.3.6 Conclusions on scenario calculations.....	71

6. Waste Composition and Waste Package Description	72
6.1 Equilibrium Scenarios	73
6.1.1 Scenario A1	73
6.1.2 Scenario A2	74
6.1.3 Scenario A3	74
6.1.4 Scenario B1	74
6.1.5 Scenario B2	74
6.2 Waste Forms	75
6.2.1 HLW forms	75
6.2.2 Long lived ILW Forms	76
6.3 Waste Packages for Final Disposal	77
6.3.1 Waste Packages Concepts	77
6.3.2 Waste Packages Production and Volumes	80
6.3.3 Mass Inventory of Relevant Radionuclides	81
6.3.4 Radioactive Inventory	83
6.3.5 Radiotoxic Inventory	84
6.3.6 Thermal Power	86
6.3.7 Gamma and Neutron Emission	87
6.3.8 Waste Package Radiation Levels	89
6.4 Transition Scenarios	90
6.4.1 Transition Scenario A3 (TSA3)	90
6.4.2 Transition Scenario B1 (TSB1)	90
6.4.3 Transition Scenario B2 (TSB2)	91
6.4.4 HLW Packages Production	92
6.4.5 HLW Radiotoxic Inventory	94
6.4.5 HLW Thermal Power	97
6.5 Scenario Variants (Caesium and Strontium Partitioning)	98
6.6 Conclusions	100
7. Impact on Final Disposal	103
7.1 Impact of advanced fuel cycle scenarios on repository designs for HLW disposal	103
7.1.1 Impact of the thermal output on the repository design in case of HLW disposal in granite (Spain)	104
7.1.2 Impact of the thermal output on the repository design in case of HLW disposal in granite (Czech Republic)	105
7.1.3 Impact of the thermal output on the repository design in case of HLW disposal in clay (Belgium)	107
7.1.4 Impact of the thermal output on the repository design in case of HLW disposal in salt (Germany)	111
7.1.5 Conclusions concerning HLW repository designs	112
7.2 Impact of advanced fuel cycle scenarios on the long-term radiological consequences of HLW disposal in geological repositories	113
7.2.1 Evaluations of the radiological impact for HLW disposal in granite (Spain)	115
7.2.2 Evaluations of the radiological impact for HLW disposal in clay (Belgium)	118
7.2.3 Evaluations of the radiological impact for HLW disposal in clay (France)	120
7.2.4 Evaluations of the radiological impact for HLW disposal in salt (Germany)	122
7.2.5 Calculations made for variant scenarios and sensitivity studies	124
7.2.6 Conclusions concerning the radiological impact of disposal of HLW generated in advanced fuel cycles	130
7.3 Impact of advanced fuel cycle scenarios on the consequences of human intrusion into the geological HLW repositories	130

7.3.1 Evaluations of doses to a geotechnical worker	131
7.3.2 Conclusions concerning the impact of human intrusion	134
7.4 Impact of advanced fuel cycle scenarios on the long-term radiological consequences of long lived ILW disposal in geological repositories.....	134
7.4.1 Evaluations of the radiological impact of long lived ILW disposal in case of disposal in granite (Czech Republic)	135
7.4.2 Evaluations of the radiological impact of long lived ILW disposal in case of disposal in granite (Spain).....	137
7.4.3 Evaluations of the radiological impact of long lived ILW disposal in case of disposal in clay (Belgium).....	139
7.4.4 Conclusions concerning the radiological impact of long lived ILW disposal	142
7.5 Impact of advanced fuel cycle scenarios on long-term radiological consequences of HLW, long lived ILW and iodine waste in geological repositories.....	143
7.5.1 Evaluations of the radiological impact in case of disposal in granite (Spain)	143
7.5.2 Evaluations of the radiological impact in case of disposal in clay (Belgium)	144
7.5.3 Comparison of the calculated doses with a dose constraint	146
7.6 Conclusions	147
8. Assessment of the Results	150
8.1 Introduction	150
8.2 MCA Methodology	150
8.3 Computational Method.....	151
8.3.1 Indicators	151
8.3.2 Scores S_{ij}	151
8.3.3 Weights w_i	152
8.4 Environmental Indicators	152
8.4.1 Radiotoxicity of releases	152
8.4.2 Fuel cycle related waste	152
8.4.3 Pre-disposal waste management aspects	152
8.5 Long term consequences of radioactive waste disposal.....	152
8.5.1 Radiotoxicity in the repository	152
8.5.2 Radiotoxicity flux release into the biosphere	153
8.5.3 Human intrusion into the repository.....	153
8.5.4 Doses received due to scenario operation	153
8.6 Economic Indicators.....	154
8.6.1 Research and development costs.....	154
8.6.2 Facility construction costs	154
8.6.3 Facility operational costs.....	154
8.6.4 Waste operational costs	154
8.6.5 Decontamination and decommissioning costs	155
8.6.6 Total repository cost.....	155
8.7 Societal Indicators	157
8.7.1 Years of life lost due to power generation	157
8.7.2 Fatalities due to accidents in a nuclear fuel cycle	157
8.7.3 Proliferation Resistance.....	157
8.8 Uncertainty and Sensitivity Analysis	157
8.9 Results	158
8.9.1 MCA.....	158
8.9.2 Uncertainties in MCA	160
8.10 Societal.....	162
8.11 Discussion	163

9. Summary & Conclusions:..... 165
References:..... 173
ANNEX I..... 178
