1	Introduction	7
2	Theoretical and experimental concepts	11
2.1	Theoretical basics of scanning tunneling microscopy	11
2.1.1	The one-dimensional tunneling effect	11
2.1.2	Bardeen's perturbation theory approach	13
2.1.3	Tersoff-Hamann approximation	16
2.1.4	Tip-induced band-bending	20
2.2	The scanning tunneling microscope	21
2.2.1	Basic concept	21
2.2.2	Operation modes of a scanning tunneling microscope	21
2.3	Secondary ion mass spectroscopy	23
3	Fundamentals of the model systems: Preparation and surface structures	27
3.1	$\sqrt{3} \times \sqrt{3}$ Ga overlayers on Si(111)	27
3.1.1	Sample preparation	27
3.1.2	Geometrical structure of $\sqrt{3} \times \sqrt{3}$ adatom layers on Si(111)	28
3.1.3	Electronic structure of $\sqrt{3} \times \sqrt{3}$ Ga adatom layers on Si(111)	29
3.2	GaAs(110) surfaces	30
3.2.1	Properties of GaAs samples used	30
3.2.2	Geometrical and electronic structure of the cleavage surface	31
3.2.3	Imaging GaAs in a scanning tunneling microscope	33
3.2.4	Preparation for the XSTM	34
4	Tunneling on 2D semiconductors: The case of $\sqrt{3} \times \sqrt{3}$ Ga on Si(111)	37
4.1	STM Measurements on $\sqrt{3} \times \sqrt{3}$ Ga overlayers on Si(111)	37
4.1.1	Constant-current STM measurements	37
4.1.2	Spectroscopical measurements with the STM	38
4.2	Decay of the density of states	40
4.3	Discussion of the origin of the tunneling electrons	42
4.3.1	Tunneling with parallel wave vectors	42
4.3.2	Correlation of inverse decay lengths with band structures	44
4.3.3	Ga overlayer and substrate bandgaps	47

4.3.4	Surface states in scanning tunneling spectroscopy	47
4.4	Conclusions of Chapter 4	48
5	Electronic structure of dopants in $\sqrt{3} \times \sqrt{3}$ Ga overlayers on Si(111)	51
5.1	Measurements of localized dopant states	52
5.1.1	High-resolution constant-current STM measurements	52
5.1.2	Spectroscopical measurements with the STM	53
5.1.3	Discussion of dopant states and charges	54
5.2	Influence of dopants on the band structure	57
5.2.1	Decay of the dopant states into the vacuum	58
5.2.2	Discussion of the effect of dopants on the band structure . .	59
5.3	Conclusions of Chapter 5	61
6	Potential fluctuations in two-dimensional semiconducting structures	63
6.1	Measurements of potential fluctuations	64
6.1.1	Constant-current STM measurements	64
6.1.2	Spectroscopical measurements with the STM	65
6.1.3	Correlation of the local height and the dopant concentration	66
6.2	Analysis of local potential fluctuations	67
6.2.1	Extracting local potential data	67
6.2.2	Interpretation and application of a macroscopic model . .	73
6.3	Limits of nanoscale potential fluctuations	75
6.3.1	Experimental power spectrum and autocorrelation function .	75
6.3.2	Vanishing of potential fluctuations at high dopant concentrations	78
6.3.3	Modelling $n^+ - n^{++}$ interface	79
6.4	Probability distribution for the conduction band edge energy .	80
6.5	Conclusions of Chapter 6	82
7	Delta-doped layers in GaAs	83
7.1	Measurements of delta-doped layers	83
7.1.1	Structure of the sample	83
7.1.2	Constant-current STM measurements	84
7.1.3	SIMS measurements	87
7.1.4	Width of Be delta-doped layers	88
7.2	Discussion of the delta-doped layers embedded in intrinsic GaAs (type B)	90
7.2.1	Theoretical expectations	90
7.2.2	Shape of Be delta-doped layers	92
7.2.3	Identifications of the mechanisms affecting the diffusion .	94
7.3	Discussion of the delta-doped layers embedded in n -doped GaAs (type A)	96

7.3.1	Identification of defect processes during MBE growth of Si-doped embedding GaAs	97
7.3.2	Stability and reduced diffusion of the delta-doped layers embedded in <i>n</i> -doped GaAs	102
7.4	Conclusions of Chapter 7	104
8	Defect kinetics on GaAs(110) surfaces	107
8.1	Time-resolved XSTM measurements of Ga vacancies	107
8.1.1	Constant-current STM images of Ga vacancies	107
8.1.2	Ga vacancy formation rate	111
8.2	Rate equations of the vacancy formation kinetics	112
8.2.1	Vacancy rate equations	112
8.2.2	Adatom rate equations	116
8.3	Analysis of the kinetics	118
8.3.1	Rate equations for the specific system conditions	118
8.3.2	Approximation for small concentrations	120
8.3.3	Approximation for the saturation concentrations	122
8.4	Discussion of the atomistic processes	124
8.4.1	Results for <i>n</i> -type material	124
8.4.2	Comparison to <i>p</i> -type material	126
8.5	Conclusions of Chapter 8	127
9	Conclusions	129
