1	Introduction	9
2	Low energy interaction within a proton-proton-meson system	13
2.1	Excitation functions for $pp \rightarrow pp\eta$ and $pp \rightarrow pp\eta'$ reactions	13
2.2	Comparison of η , η' and π^0 meson interaction with protons	14
2.3	Definitions of observables	16
2.4	pp and p -meson invariant mass distributions	17
3	Experimental facility	21
3.1	Cooler Synchrotron COSY	21
3.2	COSY-11 detector setup	23
3.3	Trigger logic	25
4	Calibration of the detector setup	27
4.1	Space-time relation for drift chambers	27
4.2	Time-of-flight calibration of scintillator detectors	28
4.3	Monitoring of relative beam-target settings	29
5	Identification of the $pp \rightarrow pp\eta'$ reaction	33
5.1	Identification of protons	33
5.2	Identification of the η' meson	34
6	Luminosity determination	37
7	Determination of the spread and the absolute value of the beam momentum	41
8	Fine tuning of the relative dipole-chamber settings	45
9	Evaluation of the differential distributions	47
9.1	Kinematical fit	47
9.2	Background subtraction	50
9.3	Systematic errors of background estimation	56

10 Cross sections	57
10.1 Acceptance corrections	57
10.2 Total and differential cross sections	62
10.3 Comparison with results for the η meson production	68
10.4 s_{pp} and $s_{p\eta'}$ distributions in view of theoretical predictions	70
11 Summary	75
A Pseudoscalar mesons	77
B Parameterization of the proton-proton Final State Interaction	79
C Formalism of a combined analysis of photo- and hadro-production of the η' meson	81
D Linear energy dependence of the production amplitude	83
