
CONTENTS

1. INTRODUCTION	1
1.1 NOMENCLATURE	1
2. MODELLING REQUIREMENTS	5
3. MODELLING DESCRIPTION	6
3.1 PHYSICAL PROCESSES	6
3.1.1 The Spatial Domain	6
3.1.2 The Time-dependent Neutron Flux	6
3.1.3 Neutron Cross Sections	7
3.1.4 Short-term Reactor Dynamics	7
3.1.5 Medium-term Reactor Dynamics	8
3.1.6 Heat Production	8
3.2 PHYSICAL MODELLING AND SOLUTION OF EQUATIONS	9
3.2.1 The Calculational Domain	9
3.2.2 Cross Section Representation	11
3.2.2.1 Diffusion constants	12
3.2.2.2 Overlaid cross-section sets	13
3.2.2.3 Modelling of control rods	13
3.2.3 The Neutron Flux Solution	14
3.2.3.1 The time-dependent diffusion equations	14
3.2.3.2 Spatial discretization	14
3.2.3.2.1 Boundary conditions	17
3.2.3.3 Delayed neutron production	19
3.2.3.3.1 Transient case	20
3.2.3.3.2 Steady-state case	21
3.2.3.4 Time Discretization	21
3.2.3.5 The Steady-state Calculation	22
3.2.3.5.1 The start-up feedback term	22
3.2.3.6 The leakage iteration method	22
3.2.3.7 Mapping properties to/from the iteration mesh	27
3.2.3.7.1 Calculating the material mesh based neutron flux	27
3.2.3.7.2 Calculating coarse iteration mesh based properties	30
3.2.3.7.3 Mapping properties from the material mesh to the coarse iteration meshes	31
3.2.3.8 Convergence of the flux solution	32
3.2.3.8.1 Source iteration	33
3.2.3.8.2 Obtaining an initial guess for the steady-state neutron flux and transverse leakage	34
3.2.3.9 Buckling feedback in the material mesh	35
3.2.3.10 Global reactor parameters	36
3.2.4 Fission Product Poisoning	39
3.2.4.1 Transient case	41
3.2.4.2 Steady-state case	43
3.2.4.3 Approach-to-equilibrium case	43
3.2.4.4 Calculation of neutron poison macroscopic cross sections	44
3.2.5 Heat Production	45
3.2.5.1 Prompt power	46
3.2.5.2 Decay Heat	46
3.2.5.2.1 Reactor life history	47
3.2.5.2.2 Fission product contribution	48
3.2.5.2.3 Contribution of the Actinides ^{239}U , ^{239}Np , ^{233}Th and ^{233}Pa	48
3.2.5.2.4 Total decay heat production	49
3.2.5.2.5 Extending the operational time	51
3.2.5.2.6 Time-dependent decay heat production	52
3.2.5.2.7 Effective steady-state heat production	56

3.2.5.3 Locality of heat production.....	57
3.2.5.3.1 Local heat sources	57
3.2.5.3.2 Non-local heat sources.....	58
3.2.6 Determining Feedback Values for Calculating Cross Sections.....	60
3.2.6.1 Time-dependent extrapolation.....	60
3.2.6.2 Coated particle overheating model.....	63
3.2.6.2.1 Steady-state case.....	64
3.2.6.2.2 Time-dependent case.....	65
3.2.6.2.3 Coated particle parameters	65
3.2.6.3 Determining representative fuel and moderator temperatures.....	67
3.2.6.4 Determining representative molecular concentrations	69
4. BASIC MODELLING EQUATIONS	71
4.1 CALCULATIONAL STRUCTURE.....	71
4.1.1 The Nuclear Calculation	72
4.1.2 Calculation Algorithms.....	72
4.2 OUTSTANDING ISSUES	77
5. APPENDICES	78
5.1 APPENDIX A: THE DECAY HEAT CONSTANTS AS APPLIED IN TINTE	78
5.2 APPENDIX B: MODIFICATION OF THE ABSOLUTE DELAYED NEUTRON YIELDS FOR USE IN TINTE	83
5.3 APPENDIX C: MODIFICATION OF THE DELAYED NEUTRON PRECURSOR GROUPS FOR USE IN TINTE	84
5.4 APPENDIX D: SATURATION FISSION PRODUCT YIELD AND DECAY DATA.....	87
6. REFERENCES	92

FIGURES

Figure 1: The TINTE Nuclear Calculational Domain	10
Figure 2: Defining Cross-section Sets for the Simulation of Control Rod Movement	13
Figure 3: Spatial Discretization Layout.....	15
Figure 4: The Extrapolated Length Boundary Condition	18
Figure 5: Configuration of Channels, Layers and Blocks	24
Figure 6: Calculating the Material Mesh Based Neutron Flux, 1D Case.....	28
Figure 7: Calculating the Material Mesh Based Neutron Flux, 2D Case.....	29
Figure 8: Mapping Cross Sections to the Coarse Iteration Mesh.....	31
Figure 9: Choosing the Optimal Starting Channel to Improve Convergence of the Leakage Iteration Method.....	34
Figure 10: A Typical Flux Profile Shown against the Nu-fission Cross Section	35
Figure 11: Transmutation Decay Chain for a Typical Saturation Fission Product	39
Figure 12: A Power Histogram	47
Figure 13: Time Extrapolation of the Nuclear Heat Sources.....	60
Figure 14: Time Extrapolation of the Solid Material Temperatures.....	61
Figure 15: Lumped Particle Model for Particle Overheating	63
Figure 16: The Modular Structure of TINTE; the Principle of Time Discretization [4]	71
Figure 17: The TINTE Nuclear Calculation [4]	73
Figure 18: Flow Diagram for the Steady-State Nuclear Calculation	74
Figure 19: Flow Diagram for the Time-dependent Nuclear Calculation	75
Figure 20: Flow Diagram for the Neutron Flux Inner Iteration.....	76
Figure 21: The Decay Heat Functions A(t) and H(t) from DIN 25 485	79
Figure 22: Comparison of the Decay Heat Release of ^{235}U for the DIN Decay Data and Fitted Values	80
Figure 23: Comparison of the Decay Heat Release of ^{238}U for the DIN Decay Data and Fitted Values	81

Figure 24: Comparison of the Decay Heat Release of ^{239}Pu for the DIN Decay Data and Fitted Values.....	81
Figure 25: Comparison of the Decay Heat release of ^{241}Pu for the DIN Decay Data and Fitted Values.....	82
Figure 26: Delayed Neutron Decay Curves for ^{235}U , ^{232}Th , ^{233}U and ^{238}U	85
Figure 27: Delayed Neutron Decay Curves for ^{239}Pu , ^{240}Pu , ^{241}Pu and ^{242}Pu	85

TABLES

Table 1: Decay Constants for the Six Delayed Neutron Precursor Groups, ^{235}U [13]	19
Table 2: Fractional Fission Yield (β) of Delayed Neutrons for Fissionable Isotopes	20
Table 3: Fraction of Delayed Neutrons (β_l / β) for Fissionable Isotopes and the Six Delayed Neutron Precursor Groups	20
Table 4: Decay Constants for Neutron Poisons as used in TINTE	40
Table 5: Direct Fission Yield of Strong Absorbers for Fissionable Isotopes [13]	41
Table 6: Fission Energy Release (MeV) for the Fissionable Isotopes [23]	45
Table 7: Decay Heat Group Constants used in TINTE, Contribution of Fission Products and Remaining Capture Reactions	50
Table 8: Decay Heat Group Constants used in TINTE, Contribution of the Remaining Actinides.....	51
Table 9: Fuel Data Assumed for the Coated Particle Overheating Model	66
Table 10: Comparison of TINTE and ENDF/B VI Total Delayed Neutron Yields.....	83
Table 11: Group Delayed Neutrons Data (β_l / β) for the Fissionable Isotopes ^{235}U , ^{232}Th , ^{233}U and ^{238}U	84
Table 12: Group Delayed Neutrons Data (β_l / β) for the Fissionable Isotopes ^{239}Pu , ^{240}Pu , ^{241}Pu and ^{242}Pu	84
Table 13: Comparison of the Decay Constants of Selected Isotopes, ENDF/B VI versus TINTE.....	87
Table 14: Cumulative Fission Yields of Selected Isotopes in the Ground State, from ENDF/B VI.....	88
Table 15: Cumulative Fission Yields of Selected Isotopes in the First Excited State, from ENDF/B VI	88
Table 16: Independent Fission Yields of Selected Isotopes in the Ground State, from ENDF/B VI.....	88
Table 17: Independent Fission Yields of Selected Isotopes in the First Excited State, from ENDF/B VI	89
Table 18: Effective Fission Yields of Selected Decay Chain Isotopes, from ENDF/B VI.....	89
Table 19: Difference in Fission Yields of Selected Decay Chain Isotopes, ENDF/B VI versus TINTE Values	90
Table 20: Estimated Error in Neutron Poison Concentrations	91
