

Table of contents

Chapter 1

Introduction

1.1	PAH.....	1
1.2	Review of the studies on PAH sorption	2
1.3	Significance and objectives.....	5

Chapter 2

Theory

2.1	Fundamentals of sorption theory.....	7
2.1.1	Sorption mechanisms	7
2.1.2	Sorption models	8
2.1.3	Ideal adsorbed solution theory for prediction of sorption in multi-solute systems	15
2.2	Heterogeneity of natural sorbents and the effect on PAH sorption.....	18
2.2.1	Minerals in sediments and the role in PAH sorption.....	19
2.2.2	Specific surface area and porosity.....	20
2.2.3	Soil and sediment organic matter and the principal forms	22
2.2.4	Humic acid and the role in PAH sorption	24
2.2.5	Black carbon and the role in PAH sorption.....	26
2.3	Theory of fluorescence spectroscopy.....	28
2.3.1	Fluorescence quenching	29
2.3.2	Inner filter effect	30

Chapter 3

Experimental Methodology

3.1	Sorptive chemicals and solutions	31
3.2	Sorbents.....	32

3.2.1	Model sorbents: humic acid, charcoal and illite.....	32
3.2.2	Natural sorbents: pristine and preheated sediments	33
3.2.3	Sorbents characterizations.....	34
3.3	Sorption experiments	37
3.3.1	Sorption experiments with humic acid.....	37
3.3.2	Sorption experiments with illite, charcoal, pristine and preheated sediments	39
3.4	Analytical methods.....	41
3.4.1	Fluorescence emission spectra	42
3.4.2	Synchronous fluorescence spectra	42

Chapter 4

PAH sorption to sediment constituents

4.1	PAH sorption to humic acid.....	45
4.1.1	The pH effect on PAH sorption to humic acid.....	46
4.1.2	The cation effect on PAH sorption to humic acid.....	47
4.1.3	The effect of ionic strength on PAH sorption to humic acid.....	48
4.2	PAH sorption to charcoal	50
4.3	PAH sorption to illite	54
4.4	Conclusions	56

Chapter 5

Sorbent effect: effect of organic carbon and mineral surface on the pyrene sorption to pristine and preheated sediments

5.1	Sorption isotherms of pyrene to pristine and preheated sediments	57
5.2	Fitting of the pyrene sorption isotherms with different sorption models	59
5.2.1	Freundlich model fitting of pyrene sorption to pristine and preheated sediments	59
5.2.2	LLM and LPDMM fitting of pyrene sorption to pristine sediments.....	62
5.2.3	PDMM fitting of pyrene sorption to preheated sediments.....	67
5.3	Modelling of pyrene distribution in sediment components.....	71
5.4	Conclusions	75

Chapter 6

Sorbate effect: sorption of phenanthrene and pyrene to pristine (NJ1) and preheated (NJ1₃₇₅) sediments

6.1	Sorption isotherms of phenanthrene and pyrene to pristine and preheated sediments...	77
6.2	Fitting of the phenanthrene and pyrene sorption isotherms with different sorption models	78
6.2.1	Freundlich model fitting of phenanthrene and pyrene sorption to pristine and preheated sediments.....	78
6.2.2	Composite models fitting of phenanthrene and pyrene sorption to pristine and preheated sediments.....	80
6.3	Conclusions	81

Chapter 7

Cosolute effect: effect of phenanthrene on the pyrene sorption to model and natural sorbents

7.1	Cosolute effect of phenanthrene and naphthalene on the pyrene sorption to humic acid	83
7.2	Cosolute effect of phenanthrene on the pyrene sorption to illite, charcoal, pristine (NJ1) and preheated (NJ1 ₃₇₅) sediments.....	85
7.2.1	Sorption isotherms of pyrene to illite, charcoal and sediments in single and binary solute systems	85
7.2.2	Fitting of the pyrene sorption to illite, charcoal and sediments in single and binary solute systems.....	87
7.2.3	Ideal adsorbed solution theory simulation for competitive effect of phenanthrene on the sorption of pyrene in binary solute systems	93
7.3	Conclusions	97

Chapter 8

Conclusions	99
