

Contents

1	Introduction	1
2	Fundamentals.....	5
2.1	Current memory devices.....	5
2.2	Alternative memory concepts.....	7
2.2.1	MRAM concept	7
2.2.2	PCRAM concept	8
2.2.3	FeRAM concept	9
2.3	Physics of nanometer metal lines for crossbar architecture.....	9
2.3.1	Fuchs and Sondheimer model	10
2.3.2	Mayadas and Shatzkes model	12
2.4	Resistance switching for ReRAM	14
2.5	Bipolar resistance switching in TiO ₂	15
2.6	Concepts for resistive switching applications.....	19
2.6.1	Active ReRAM	19
2.6.2	Passive ReRAM	20
2.6.3	Logic applications	22
3	Sample preparation.....	27
3.1	Optical lithography	28
3.2	Electron beam lithography.....	29
3.2.1	The electron beam direct writing system	29
3.2.2	Resist chemistry of the PMMA and the PMMA/MAA.....	36
3.2.3	Lift-Off patterning	38
3.3	Metallization.....	41
3.3.1	DC- sputter deposition	41
3.3.2	Thermal evaporation	42
3.4	TiO ₂ deposition.....	45
3.4.1	Atomic layer deposition	45
3.4.2	Reactive sputtering.....	47
3.5	Exposing the bottom electrodes	50
4	Analytical methods for nano structures	51
4.1	Scanning electron microscopy for device examination	51
4.2	Atomic force microscopy	53
4.3	Electrical characterization	54
4.3.1	Setup for quasi-static measurements	54
4.3.2	Setup for pulse measurements.....	58
5	Nano electrodes	59
5.1	The choice of the electrode material.....	59
5.2	Test structures.....	60
5.3	Electrical characteristics	61
5.4	Design and features of nano crosspoint junctions	67
5.4.1	Single nano crosspoint junctions.....	68
5.4.2	Nano words or register like structures	69
5.4.3	Nano crossbar arrays.....	72

Contents

5.5	Nano metal line robustness.....	74
5.6	Insulation characteristics of nano metal lines	75
6	Investigations of resistance switching in TiO ₂	81
6.1	Electroforming of TiO ₂	81
6.1.1	Voltage controlled electroforming	83
6.1.2	Current controlled electroforming.....	86
6.2	Design of micro test structures	90
6.3	Electrical characteristics of TiO ₂ deposited by atomic layer deposition.....	91
6.4	Electrical characteristics of TiO ₂ deposited by reactive sputtering.....	101
6.5	Switching characteristics in nanometer regime	105
6.6	Unipolar switching in nano crosspoint junctions.....	111
7	Considerations of TiO ₂ for ReRAM applications.....	115
7.1	Retention in nano crosspoint junctions	115
7.2	Temperature behavior of bipolar switching	116
7.3	Pulse controlled switching	117
7.3.1	Resistance switching with 10 ns pulses.....	117
7.3.2	Pulse amplitude controlled OFF-state variations	119
7.3.3	Pulse length dependences of the OFF-state.....	120
7.4	Examinations of nano crossbar configurations	123
7.4.1	Operation of a nano word device	123
7.4.2	Experimental crosstalk considerations in a passive nano crossbar array.....	125
8	Conclusion and Outlook	131
9	Bibliography	135
