

Contents

1	Introduction	1
2	The tropical tropopause layer (TTL)	5
2.1	Periodic variations of trace gases in the TTL	7
2.2	Annual cycle of ozone above the tropical tropopause	8
2.3	Hydration and dehydration in the TTL	10
3	Data and method	13
3.1	ERA-Interim reanalysis	13
3.2	Diabatic versus kinematic transport	14
3.3	Transport modelling	20
4	Impact of the transport representation on modelling transport in the TTL	25
4.1	Trajectory set-up	26
4.2	Tropical upwelling	26
4.3	Transport into the TTL	27
4.4	Transport across the TTL	31
4.5	Discussion: Sensitive and robust transport characteristics	37
4.6	Chapter conclusions	43
5	Insight from ozone and water vapour on transport in the TTL	45
5.1	Backtrajectory prediction of water vapour and ozone	45
5.2	Ozone and water vapour in the TTL	49
5.3	Ozone and water vapour predictions for diabatic and kinematic transport	54
5.4	Discussion: Water vapour, ozone and transport in the TTL	56
5.5	Chapter conclusions	60
6	Impact of horizontal in-mixing on trace gas seasonality in the TTL	61
6.1	Seasonality of transport into the TTL	63
6.2	Seasonality of trace gas concentrations	65
6.3	Discussion: The annual ozone cycle in the TTL	69
6.4	Chapter conclusions	71

7	CLaMS simulations based on ERA-Interim	73
7.1	Model configuration	73
7.2	Comparison between CLaMS simulation and satellite observations	75
7.3	Chapter conclusions	78
8	Summary and conclusions	79
A	Vertical transport in CLaMS	83
A.1	Hybrid potential temperature coordinate ζ	83
A.2	Calculation of the surface pressure tendency	84
B	Effect of production, loss and transport on ozone in the TTL	87
	Symbols and abbreviations	89
	List of Figures	91
	List of Tables	93
	Bibliography	95
