Contents

Fourier Transform-Based Methods for Long-Range Interactions: Ewald, P^{3}M and More
Axel Arnold **1**

1 Introduction 1
2 The Standard 3D Ewald Method 2
3 Mesh-Accelerated Ewald Methods (P^{3}M) 8
4 Electrostatic Layer Correction (ELC) 13
5 Dipolar Ewald Summation in 3D 19
6 Concluding Remarks 24

Multigrid Methods for Long-Range Interactions
Matthias Bolten **27**

1 Introduction 27
2 Multigrid Methods 28
3 Multigrid Methods for Long-Range Interactions 35
4 Parallelization 39
5 Conclusion and Outlook 41

Parallel Tree Codes
Paul Gibbon, Robert Speck, Lukas Arnold, Mathias Winkel, Helge Hübner **43**

1 Introduction 43
2 Parallel Tree Codes: the Basics 44
3 Algorithm Scaling and Performance 57
4 Summary and Outlook 60

The Error-Controlled Fast Multipole Method for Open and Periodic Boundary Conditions
Ivo Kabadshow, Holger Dachsel **63**

1 Introduction 63
2 Fast Multipole Method for Open Boundaries 66
3 Fast Multipole Method for Periodic Boundaries 78
4 Error Control 86
5 Benchmark 86
6 Main Features 89
7 Summary 90

Simulating Charged Systems with ESPResSo
Axel Arnold, Olaf Lenz, Christian Holm **93**
1 Introduction 93
2 Features of ESPResSo 94
3 Using ESPResSo 96
4 Concluding Remarks 100

Particle Simulation Based on Nonequispaced Fast Fourier Transforms
Michael Pippig, Daniel Potts **103**
1 Introduction 103
2 Nonequispaced Fourier Transforms 104
3 Fast Summation Algorithms 110
4 Application to Particle Simulation for the Coulomb Potential 115
5 Numerical Results 120
6 Summary 128

Classical Particle Simulations
Godehard Sutmann **131**
1 Introduction 131
2 Models for Particle Interactions 136
3 The Integrator 148
