1	Introduction	1
2	Basics of Tokamaks and Edge Stability Control	5
2.1	Basics of Tokamaks	5
2.1.1	Tokamak Principle	5
2.1.2	Particle and Energy Exhaust: Limiter vs. Divertor concept	8
2.1.3	High Confinement Mode and Edge Instabilities (ELMs)	9
2.2	ELM Control in High Confinement Plasmas by Resonant Magnetic Perturbations	10
3	Experimental Setup	13
3.1	TEXTOR Tokamak	13
3.2	Resonant Magnetic Perturbations at TEXTOR: the Dynamic Ergodic Divertor	14
4	Plasma Edge Diagnostics	17
4.1	High Resolution Gas-Puff Imaging (GPI)	18
4.1.1	Setup of GPI at TEXTOR	18
4.1.2	Electron Density Dependence of H_α Emission	20
4.2	Electron Density and Temperature Measured with a Supersonic Helium Beam	21
4.2.1	Stationary Collisional Radiative Model and Application to Dynamic Processes	22

4.2.2	Application of Supersonic Gas Injections	25
4.2.3	Experimental Setup of the SHE	26
4.2.4	Spatial and Temporal Resolution of the SHE Diagnostic	30
4.2.5	Highly Resolved SHE Measurements and Comparison to Standard Diagnostic at TEXTOR	32
4.3	Particle Flux Measurements with Langmuir Probes in Front of the DED coils	34
4.4	Data Evaluation Methods: Conditional Averaging and Cross-Correlation .	36
5	Perturbed Magnetic Topology at TEXTOR and Plasma Response	39
5.1	Field Line Tracing in Vacuum Approximation in High Resistivity Plasmas	40
5.2	Visualization Methods of the Magnetic Topology	41
5.3	Modeling of the Plasma Parameters in a Perturbed Magnetic Topology in Vacuum Approximation	45
5.4	Experimental Findings with static RMP fields in High and Low Resistivity Plasmas	46
5.5	Plasma Response in Resistive Plasmas	49
6	Results	55
6.1	Three-dimensional Imaging of a Rotating Edge Plasma Structure	55
6.1.1	Experimental Scenario	56
6.1.2	Visualization of a Rotating Plasma Structure	58
6.1.3	Summary and Conclusion	61
6.2	Formation of a Three-Dimensional Scrape-Off Layer with Fast Rotating Resonant Magnetic Perturbation Fields	62
6.2.1	Experimental Scenario	63
6.2.2	Formation of a Rotating Three-Dimensional Scrape-Off Layer . . .	64
6.2.3	Summary and Conclusion	68
6.3	Rotation Dependence of Electron Density and Temperature Fields in the Plasma Edge	70
6.3.1	Experimental Scenario	70

6.3.2	Rotation Dependent Shift of the Edge Plasma Structure Relative to the Magnetic Topology in Vacuum Approximation	71
6.3.3	Comparison of Electron Density and Temperature Modulations to the Magnetic Topology in Vacuum Approximation	75
6.3.4	Identification of the Local Magnetic Topology by Density, Temperature and Pressure Profile Reactions	80
6.3.5	Summary and Conclusion	84
6.4	Rotation Dependence of Ion Fluxes in Front of Resonant Magnetic Perturbation Coils	87
6.4.1	Experimental Scenario	88
6.4.2	Rotation Dependence of a Target Plasma Structure	89
6.4.3	Summary and Conclusion	93
7	Summary	95
