## Introduction

1

---

<b>Background of the contaminated groundwater in Bitterfeld (Germany)...</b>	<b>1</b>
<b>Constructed wetlands and removal mechanisms for organic pollutants....</b>	<b>3</b>
1. Definition of constructed wetlands.....	3
2. Removal mechanisms for organic pollutants.....	3
Volatilization.....	3
Removal mechanisms in substrate – sorption.....	4
Removal mechanisms relevant for macrophytes.....	4
Microbial degradation of organic pollutants – biodegradation.....	5
<b>Monochlorobenzene and its removal mechanisms.....</b>	<b>7</b>
<b>Microbiological methods in microbial studies for constructed wetlands ...</b>	<b>9</b>
<b>DNA microarray technology.....</b>	<b>11</b>
1. Definition of DNA microarray.....	11
2. Procedures of functional gene arrays analysis.....	12
3. DNA extraction from environmental samples.....	14
<b>Aim of this work.....</b>	<b>15</b>

## Materials

19

---

<b>The constructed wetlands in Bitterfeld (Germany).....</b>	<b>19</b>
<b>Physical and chemical characterizations of the constructed wetlands.....</b>	<b>19</b>
1. In-situ measurements of the constructed wetlands.....	19
2. Ions in the constructed wetlands.....	20
3. Organic pollutants in groundwater samples from the constructed wetlands...	21
<b>Functional gene arrays.....</b>	<b>21</b>
<b>Fluorescent substances.....</b>	<b>23</b>
1. Cy5.....	23
2. PicoGreen.....	24
3. SYBR Green I.....	24

<b>Size standards</b> .....	<b>24</b>
<b>Oligonucleotides</b> .....	<b>25</b>
<b>Chemical reagents</b> .....	<b>25</b>
<b>Solutions and buffers</b> .....	<b>27</b>
1. Solutions and buffers for the DGGE analysis.....	27
2. Solutions for the FGA analysis.....	27
3. Other solutions and buffers.....	27
<b>Kits</b> .....	<b>28</b>
<b>Apparatus and instruments</b> .....	<b>28</b>
1. Apparatus for the FGA analysis.....	28
2. Apparatus for the DGGE analysis.....	28
3. Other apparatus.....	28
4. Technical instruments.....	29
<b>Softwares</b> .....	<b>29</b>

## **Methods**

**31**

---

<b>Sampling</b> .....	<b>31</b>
<b>Chemical methods</b> .....	<b>31</b>
1. Water content of soil samples.....	31
2. Identification of chemicals using Gas Chromatography-Mass Spectrometry.	31
<b>Microbiological and molecular methods</b> .....	<b>33</b>
1. Fluorescent microscopic enumeration of bacteria.....	33
2. DNA extraction.....	34
3. DNA purification.....	34
Primary plan for DNA purification.....	34
DNA purification using gel filtration column.....	34
4. DNA quantification.....	36
DNA quantification using spectrophotometer.....	36
DNA quantification using PicoGreen assay.....	36
5. DNA amplification.....	36
Rolling circle amplification (RCA).....	36
Whole genome amplification (WGA).....	37

PCR amplification for DGGE analysis.....	37
Group-specific PCR amplification – nested PCR.....	37
6. Denaturing gradient gel electrophoresis (DGGE).....	38
7. Microarray techniques.....	39
Labeling.....	39
Hybridization.....	39
Data analysis.....	40
<b>Statistical methods.....</b>	<b>41</b>

## Results

43

### Part 1: Evaluation of suitable DNA preparation procedures

<b>DNA extraction and purification of the wetlands samples.....</b>	<b>43</b>
1. Evaluation of the primary plan of DNA extraction and purification.....	43
2. Removal of humic substances by gel filtration column purification.....	43
<b>Evaluation of three commercial DNA extraction kits.....</b>	<b>46</b>
1. Purity and quantity of DNA extracts and their PCR performance.....	46
2. Application of their DNA extracts in the DGGE analysis.....	47
3. Application of their DNA extracts in the microarray analysis.....	48
<b>Evaluation of the whole genome amplification.....</b>	<b>51</b>

### Part 2: Influences of plant/seasons on bacterial function and community structures in constructed wetlands (Bitterfeld, Germany)

<b>Physiochemical characterization of soil samples.....</b>	<b>53</b>
<b>Removal efficiencies of main organic pollutants and of some ions.....</b>	<b>55</b>
1. Removal efficiencies of main organic pollutants in groundwater samples...	55
2. Chemical analysis of sulfate in groundwater samples.....	55
<b>Influences of plant/seasons on total bacterial abundance in constructed wetlands.....</b>	<b>56</b>
<b>Influences of plant/seasons on bacterial community compositions.....</b>	<b>57</b>
1. Influence of plants on bacterial community compositions.....	57
2. Influence of seasonal changes on bacterial community compositions.....	59

<b>Influences of plant/seasons on bacterial function and community structures in constructed wetlands – An overview</b> .....	<b>62</b>
1. Evaluation of changed genes under influences of plant/seasons.....	63
Differences between the planted and unplanted CWs in summer...	67
Differences between the planted and unplanted CWs in winter.....	69
Seasonal difference in the planted wetland.....	71
Seasonal difference in the unplanted wetland.....	74
2. Evaluation of unchanged genes under influences of plant/seasons.....	76
<b>Influences on degradation potential of monochlorobenzene and other related processes prevailing in the constructed wetlands</b> .....	<b>79</b>
1. Evaluation about detection efficiencies of gene- and group-specific probes..	79
2. Genetic potential of the <i>ortho</i> -pathway for MCB degradation under influences of plant/seasons.....	81
3. Genetic potential of C-degradation under influences of plant/seasons.....	85
4. Potential of sulfate reduction under influences of plant/seasons.....	89

---

**Discussion** **95**

---

**Part 1: Evaluation of suitable DNA preparation procedures**

<b>Evaluation of a suitable DNA preparation procedure for subsequent analyses</b> .....	<b>95</b>
<b>Evaluation of other DNA preparation procedures for the microarray analysis</b> .....	<b>97</b>
1. Failure of the DNA purification by using the gel filtration.....	97
2. Biases of bacterial community compositions caused by the whole genome amplification.....	98

**Part 2: Influences of plant/seasons on bacterial function and community structures in the constructed wetlands in Bitterfeld (Germany)**

<b>Variations of environmental factors under influences of plant/seasons</b> .....	<b>98</b>
<b>Influences of plant/seasons on bacterial functions in the constructed wetlands in Bitterfeld</b> .....	<b>100</b>
1. Influences of plant/seasons on general bacterial functions.....	100

2. Three types of functional genes in terms of their changing forms.....	102
3. Agreements and disagreements between genetic degradation potential and removal efficiencies of bacterial processes.....	104
4. Evidences in previous studies supporting results obtained by the GeoChip analysis.....	105
<b>Genetic potential of the <i>ortho</i>-pathway of MCB degradation in the constructed wetlands in Bitterfeld (Germany).....</b>	<b>105</b>
<b>Influences of plant/seasons on bacterial community structures in the constructed wetlands (Bitterfeld).....</b>	<b>107</b>
1. Statistically insignificant differences in total bacterial abundance under influences of plant/seasons.....	107
2. Detection of relatively enormous shifts of bacterial community compositions between the planted and the unplanted CW and seasonally in the unplanted CW.....	108
3. Bacterial responses to variations of environmental conditions: changes in abundance of existing populations or in diversity.....	109
Significant differences in abundance of existing bacterial phylum groups under influences of plant/seasons.....	110
Different indications of bacterial community compositions within bacterial phylum groups insignificantly changed under influences of plant/seasons.....	111
Relationship between bacterial responses and variations of environmental factors caused by plant/seasons.....	112
4. Three responses of bacterial populations to the varying environmental conditions and the r-/K-selection theory.....	114
5. Explanation of the observations in this study with aspects of microbial ecology.....	115
Changing forms of bacterial processes with variations of environmental factors caused by plant/seasons.....	115
Preferences of the changing forms in different samples.....	116
Explanations for observations in the <i>ortho</i> -pathway of MCB degradation.....	118
<b>Degradation efficiency, genetic degradation potential and influences of plant/seasons.....</b>	<b>118</b>

1. Degradation efficiency and genetic degradation potential.....	118
2. Influences of plants.....	120
3. Influences of seasons.....	123
<b>Application of the GeoChip in the microbial study – Advantages, disadvantages and outlooks.....</b>	<b>123</b>
1. Advantages and disadvantages of the GeoChip analysis.....	124
2. Outlooks.....	124
 <b>Summary</b>	 <b>127</b>
