Transcriptional responses and transcriptional regulators of *Gluconobacter oxydans* 621H

Stefanie Karolin Schweikert

Schriften des Forschungszentrums Jülich
Reihe Gesundheit / Health

Band / Volume 51

ISSN 1866-1785

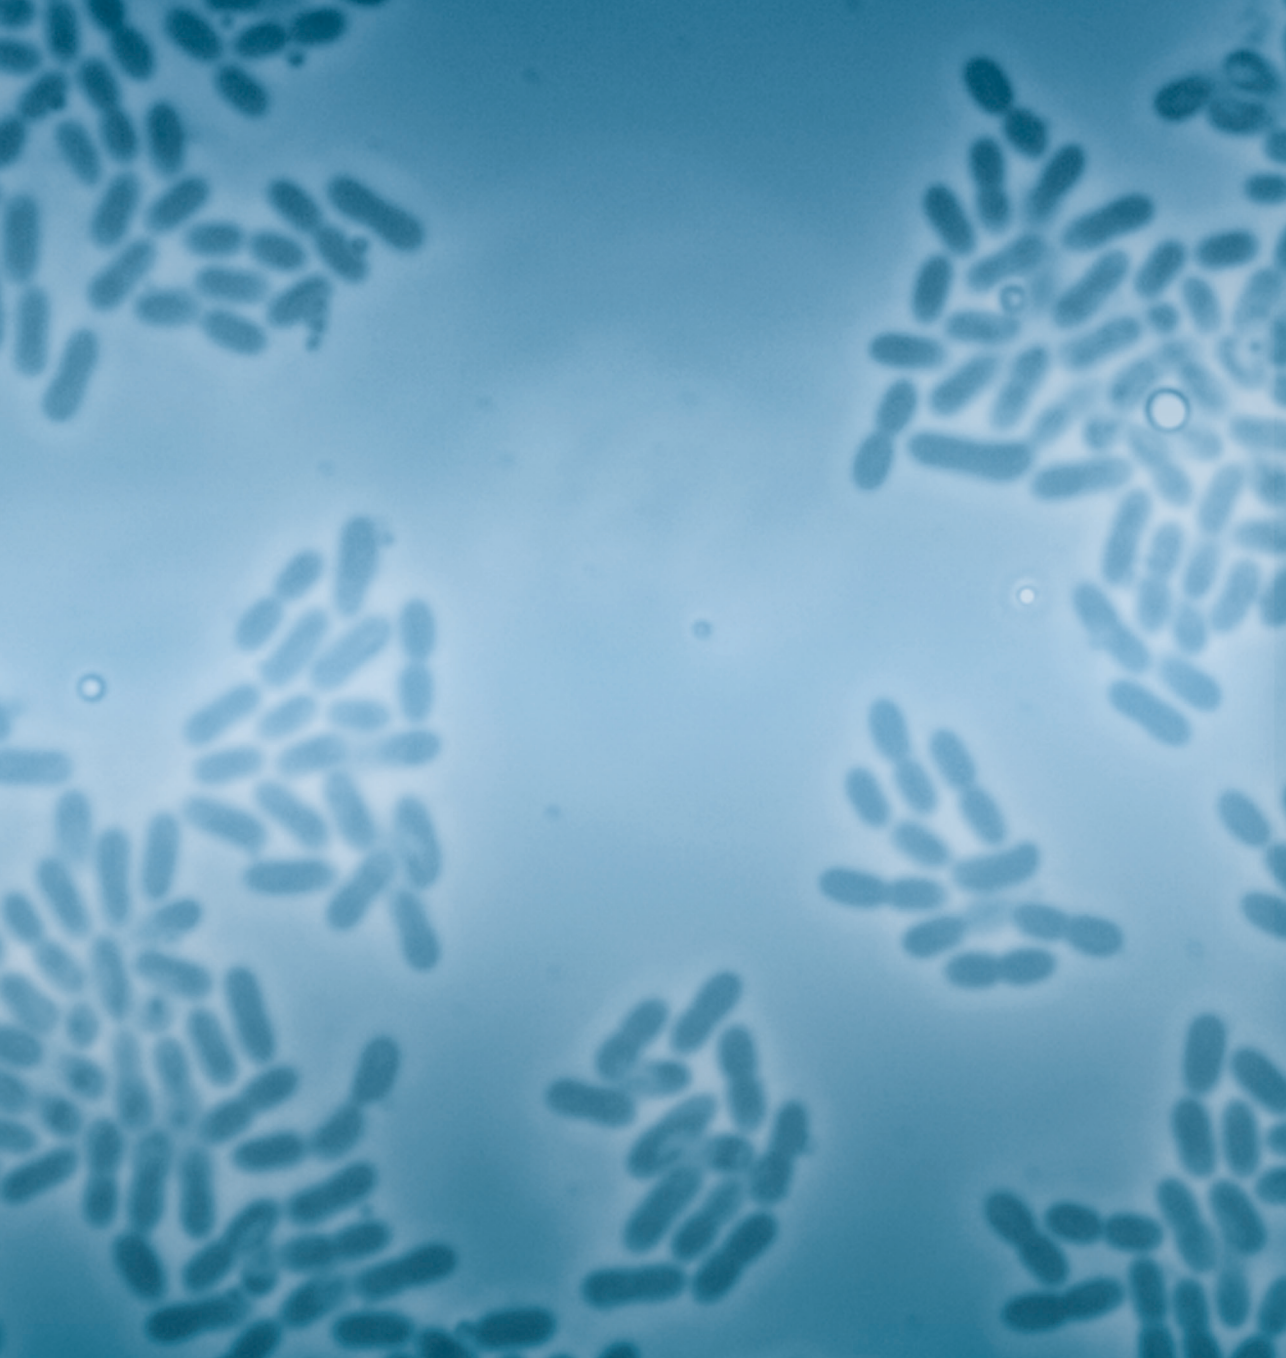

ISBN 978-3-89336-780-1

Contents

Publications	III
Abstract	V
Zusammenfassung	VII
List of Figures	XII
List of Tables	XIV
Abbreviations	XVI
1 Introduction	1
1.1 General information about <i>G. oxydans</i> 621H	1
1.2 Mannitol and fructose metabolism in <i>G. oxydans</i>	3
1.3 Iron uptake in bacteria	5
1.4 Transcriptional regulators in bacteria	5
1.5 The fumarate/nitrate reduction regulator Fnr	8
1.6 Aims of this thesis	9
2 Materials and Methods	11
2.1 General materials and procedures	11
2.1.1 General materials	11
2.1.2 General procedures	11
2.1.3 General-use buffers and media	12
2.2 Strains, Plasmids and Oligonucleotides	13
2.2.1 <i>Gluconobacter</i> and <i>E. coli</i> strains	13
2.2.2 Plasmids	14
2.2.3 Oligonucleotides	15
2.3 <i>In silico</i> analysis for determining the transcriptional regulator repertoire	17
2.4 Cloning and DNA techniques	18
2.4.1 PCR	18
2.4.2 Ligation	20
2.4.3 Cloning of plasmids	20
2.4.4 Transformation of microorganisms	22
2.4.5 Marker-free deletion of genes in <i>G. oxydans</i> by the <i>sacB</i> method	23
2.5 Cultivation conditions and HPLC analytics	24

2.5.1	Cultivation in shaking flasks	24
2.5.2	Cultivation in a parallel bioreactor system	24
2.5.3	HPLC analytics	25
2.6	RNA related methods	25
2.6.1	Sampling and isolation of RNA	25
2.6.2	Transcriptional analyses by using oligonucleotide microarrays	26
2.6.3	Determination of transcriptional start sites by 5'Race	27
2.7	Biochemical techniques	28
2.7.1	SDS Page	28
2.7.2	Protein expression and purification of GoxR	28
2.7.3	β -Galactosidase assay	30
2.7.4	Activity of pentose phosphate pathway enzymes	30
2.7.5	Electrophoretic mobility shift assays (EMSA)	33
3	Results	34
3.1	Transcriptional response of <i>G. oxydans</i> to iron limitation	34
3.2	Comparison of global gene expression for the carbon sources mannitol and fructose	36
3.2.1	Growth characteristics of cultures using mannitol or fructose as substrates	36
3.2.2	Transcriptional analysis of fructose- vs. mannitol-grown cells	39
3.2.3	Transcriptional analysis of 2nd vs. 1st growth phase using mannitol as carbon source	42
3.2.4	Enzyme activity assays of selected PPP proteins	45
3.3	The repertoire of transcriptional regulators in <i>G. oxydans</i> : a bioinformatic analysis	46
3.3.1	Change in expression of transcriptional regulators	57
3.4	Initial characterization of selected transcriptional regulators: growth properties and global gene expression of mutant strains	58
3.4.1	Growth behaviour of candidate regulator deletion strains	59
3.4.2	Transcriptional analyses of regulator mutants	61
3.4.3	Summary of the screening experiments with regulator deletion strains	65
3.5	Characterisation of an Fnr-like transcriptional regulator containing a putative iron-sulfur cluster: evidence for involvement in redox metabolism	66
3.5.1	The <i>in silico</i> analysis of GOX0974 suggests an Fnr-like function	66
3.5.2	Putative regulon of GOX0974	67
3.5.3	Putative target genes of GOX0974	70
3.5.4	Oxygen dependent activity of GOX0974	71
3.5.4.1	Reaction on oxygen limitation	71
3.5.4.2	Reaction on oxygen excess	72
3.5.5	Binding motif of GOX0974	73

3.5.6	Identification of transcriptional start sites (TSS) of <i>cydA</i> and <i>pntA1</i> . . .	74
3.5.7	Purification of GOX0974	75
3.5.8	Oxygen-dependent spectra of GOX0974	76
3.5.9	Electrophoretic mobility shift assays (EMSAs) with GOX0974	77
4	Discussion	79
4.1	Iron limitation in <i>G. oxydans</i> leads to increased mRNA levels of genes for iron uptake systems and flagella synthesis	79
4.2	The substrates mannitol and fructose differ in pathway preference for carbon assimilation	81
4.3	The determination of the repertoire of transcriptional regulators in <i>G. oxydans</i> revealed candidates for further studies	88
4.3.1	The expression level of TRs in global microarray analyses revealed promising candidates	91
4.4	The initial characterisation of TR deletion mutants revealed a promising candidate active in redox and energy metabolism	92
4.4.1	Putative function of HxlR-type regulator GOX0498	92
4.4.2	Putative function of LysR-type regulator GOX1337	92
4.4.3	Putative function of TetR-type regulator GOX0563	93
4.4.4	Putative function of LysR-type regulator GOX1711	94
4.4.5	Putative function of GalR/LacI-like regulator GOX0577	94
4.4.6	Putative function of Fnr-like regulator GOX0974	95
4.4.7	Summary of regulator mutant phenotype studies in <i>G. oxydans</i>	95
4.5	GOX0974 is a master regulator in <i>G. oxydans</i> that is involved in redox and energy metabolism	96
4.5.1	GOX0974 displays a regulon of genes related to energy and redox metabolism; three target genes were experimentally proven	96
4.5.2	The binding motif of GOX0974 and putative regulatory mechanisms	98
4.5.3	The biochemical properties of GOX0974 indicate the involvement of an iron-sulfur cluster and oxygen lability	99
4.5.4	GOX0974 activity as transcriptional regulator depends on oxygen	100
4.5.5	Summary of GOX0974 function	102
	References	103
	Appendix	114
	Acknowledgements	141
	Declaration	142
