Abstract	1
Zusammenfassung (Abstract in German)	3
1 Introduction	5
1.1 Laboratory soils as an intermediate step	8
1.2 Thesis outline	9
2 Efficient random walk particle tracking algorithm	11
2.1 Introduction	12
2.2 Theory	14
2.2.1 Reflection barrier and interpolation method	14
2.2.2 Improvements to the reflection barrier method	19
2.2.2.1 Correct time splitting for dispersion	19
2.2.2.2 One-sided reflection coefficient	20
2.2.2.3 Transformation of the dispersive displacement	22
2.3 Materials and methods	25
2.3.1 Numerical implementation of reflection barrier method	25
2.3.2 Numerical verification of improved reflection barrier method	26
2.4 Test scenarios	28
2.4.1 Test scenario S1	28
2.4.1.1 Problem description	28
2.4.1.2 Results and discussion	29
2.4.2 Test scenario S2-1 and S2-2	31
2.4.2.1 Problem description	31
2.4.2.2 Results and discussion	35
2.5 Discussion	41
2.5.1 Convergence to the true solution	41
2.5.2 Efficiency considerations	43
2.5.3 Practical application aspects of the improved reflection barrier method	45
2.6 Conclusions	46

3	Near-surface solute redistribution during evaporation	49
3.1	Introduction	50
3.2	Material and methods	51
3.2.1	Laboratory experiments	51
3.2.2	Flow and transport modeling	52
3.3	Results and discussion	53
3.3.1	Near-surface redistribution of tracers	53
3.3.2	Redistribution of tracers deeper in the sample	56
3.4	Conclusions	59
4	Upward transport in a 3-D heterogeneous laboratory soil under evaporation conditions	61
4.1	Introduction	62
4.2	Material and methods	64
4.2.1	Sandbox and boundary conditions	64
4.2.2	Porous medium	67
4.2.3	Tracer experiment under evaporation conditions	67
4.2.4	Point sensors	69
4.2.5	Time-lapse electrical resistivity tomography	70
4.2.5.1	Data acquisition	70
4.2.5.2	Inverse problem	71
4.2.5.3	Estimating the data error weighting matrix \mathbf{W}_d	72
4.2.5.4	From bulk to water electrical conductivity	73
4.2.5.5	Using structural constraints in the smoothness constraint operator \mathbf{W}_s	74
4.2.5.6	Obtaining local evaporation rates from electrical resistivity tomography	75
4.2.6	Numerical simulation of flow and transport	75
4.2.6.1	Numerical model	75
4.2.6.2	Evaporation boundary condition	76
4.2.7	Generation and inversion of synthetic electrical resistivity tomography data	77
4.2.8	Solute transport analysis	78
4.2.8.1	Comparison of monitored and modeled solute transport	78
4.2.8.2	Leaching surfaces	78
4.3	Results and discussion	79
4.3.1	Petrophysical parameters and effect of structural constraints	79
4.3.2	Total and material-specific evaporation rates	81
4.3.3	Evaporation pattern derived from electrical resistivity tomography	83
4.3.4	Comparison of monitored and modeled solute transport	85
4.3.5	Reasons for deviations between monitored and modeled solute transport	85
4.3.6	Preferential pathways of upward solute transport	91
4.4	Conclusions	91
5	Synthesis	95
5.1	Summarizing conclusions	95
5.2	Perspectives	97
5.2.1	Random walk particle tracking in vadose zone studies	97
5.2.2	The effect of upward flow periods on the leaching of solutes	97
5.2.3	From laboratory soils to natural soils	98

5.2.4	Effective parameter models that account for redistribution processes during upward flow	98
