Optical and electrical addressing in molecule-based logic circuits

Marcel Manheller

Schriften des Forschungszentrums Jülich
Reihe Information / Information Band / Volume 21

ISSN 1866-1777 ISBN 978-3-89336-810-5

Contents

1. Introduction 1

2. Theoretical description of a nanoparticle-nanoelectrode system 9

- 2.1. Tunneling in a molecule-based device . . . 9
  - 2.1.1. Charge transport based on the Simmons model . . . 10
  - 2.1.2. Transition Voltage Spectroscopy . . . 14
  - 2.1.3. Orbital mediated transport . . . 18
- 2.2. Influence of a surface dipole moment on the tunneling barrier height . . . 19
- 2.3. Temperature-dependent transport mechanisms . . . 22
  - 2.3.1. Temperature-dependent transport based on barrier suppression . . 22
  - 2.3.2. Arrhenius/Poole-Frenkel type activated hopping-based transport process . . . 24
  - 2.3.3. Granular metal conductivity model . . . 24
  - 2.3.4. Sequential charge transport in molecular wires . . . 26
- 2.4. Coulomb blockade . . . 28
- 2.5. Influence of light on the NP-molecule-nanoelectrode system . . . 30

3. Measurement equipment 32

- 3.1. Motivation and concept of the measurement setup . . . 32
  - 3.1.1. Chip carrier . . . 34
  - 3.1.2. DEPT trapping-box . . . 34
  - 3.1.3. Interconnect-switch-box . . . 38
  - 3.1.4. Sub-picoampere cryostat setup . . . 38
  - 3.1.5. Optical setup . . . 41
  - 3.1.6. Measurement programming environment: Testpoint . . . 41

4. Nanometer-Scaled Lithography 46
4.1. Nanoelectrode Fabrication by E-beam Lithography 48
    4.1.1. Fabrication route A: Standard resist layer 51
    4.1.2. Fabrication route B: Optimized resist layer and developer 53
    4.1.3. Fabrication route C: Proximity optimized pattern geometry . . . 55
    4.1.4. Comparison of fabrication routes 58
4.2. Simulation of the effective dose pattern 60
4.3. Nanoelectrodes in multi-terminal devices 64
4.4. Tunneling characteristics between nanoelectrodes with small tip separations 66

5. Dielectrophoretic trapping of charged and uncharged NPs 68
5.1. Detection of a trapping event 69
5.2. Immobilization of BP3 capped NPs (4 nm) 71
5.3. Immobilization of MES capped gold NPs (12 nm) 74
5.4. Immobilization of MES and Spiropyran (2:3) capped gold NPs (12 nm) . 77
5.5. Immobilization of Spiropyran capped CdSe NPs (4 nm) 78
5.6. Conclusion of DEPT 79

6. Transport measurements on BP3 capped NPs 80
6.1. Temperature dependent transport measurement on single BP3 capped NPs 82
    6.1.1. Molecular orbital mediated transport at 4K 89
    6.1.2. Coulomb blockade at 4K 90
6.2. Transport measurement on single BP3 capped NPs at RT 92
    6.2.1. Coulomb blockade at RT 92
    6.2.2. Simmons fit of the $I(U)$ curve 95
    6.2.3. Geometrical considerations out of electrical measurements 98
    6.2.4. TVS 99
    6.2.5. Photoconductivity in a single NP device 101
6.3. Conclusion of the BP3 capped NPs 104

7. Transport measurements on MES capped NPs 109
7.1. Mercaptoethanesulfonic acid 109
    7.1.1. UV-Vis spectroscopy on MES molecules 110
    7.1.2. Approximation of the dipole moment of MES 111

7.2. Transport measurement on single MES capped NPs at RT 112
  7.2.1. Simmons fit of the $I(U)$ curve 114
  7.2.2. Transition Voltage Spectroscopy 115
7.3. Results and discussion 116

8. Transport measurements on SP / MES capped NPs 119
8.1. DFT calculations of the SP/MC photoisomer and the MES / SP capped gold NP 120
8.2. UV - VIS spectroscopy on Spiropyran molecules 124
8.3. Excitation spectroscopy on SP/MES NP devices 125
  8.3.1. Simulation of surface plasmon polaritons in the NP-nanoelectrode system 128
8.4. Transport measurements on Type A: SP/MES (3:2) with 12 nm Au core 129
  8.4.1. Simmons fit of the $I(U)$ curve 131
  8.4.2. Transition Voltage Spectroscopy 133
8.5. Electrical switch created by photo-isomerisation of spiropyran 135
  8.5.1. Application as multi valued logic device / full adder 137
8.6. Transport measurements on Type B SP/MES (1:6) with 4 nm Au core . . 139
  8.6.1. Device1: Current voltage characteristic and TVS at RT 141
  8.6.2. Device1: Gundlach oscillations in molecular vacancies at 4K . . . 141
  8.6.3. Device2: Current voltage characteristic and TVS at RT 143
  8.6.4. Device2: Coulomb diamonds at 4K 148
8.7. Conclusion: Light induced conduction switch in devices with SP and MES capped NPs 150

9. Conclusion 159

Bibliography 168

Appendix 178
A. Investigation of BP3-capped NP by Kerstin Blech 178
  A.1. DSC Analysis using: UV/Vis, TEM, SAXS 178
  A.2. Impedance spectroscopy measurement 181
B. Influence of light on the sample-temperature 183
