Lidar observations of natural and volcanic-ash-induced cirrus clouds

Christian Rolf

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 163

ISSN 1866-1793

ISBN 978-3-89336-847-1

Contents

1	Introduction	1
1.1	Scientific questions	4
2	Cirrus clouds	7
2.1	Microphysical properties of cirrus clouds	7
2.2	Dynamics and occurrence	8
2.3	Ice formation in the atmosphere	10
2.3.1	Homogeneous freezing	10
2.3.2	Heterogeneous freezing	13
3	Cirrus modeling with MAID	17
3.1	Basic principle of MAID	17
3.1.1	Aerosol particles	17
3.1.2	Ice formation and sublimation	18
3.1.3	Sedimentation	19
3.2	Trajectory preparation	22
3.2.1	Temperature fluctuations	23
3.3	Model initialization	26
3.4	Model output	27
4	Lidar measurements	29
4.1	The LIDAR principle	29
4.2	Leo-Lidar instrument	32
4.3	Retrieval of lidar optical parameters	34
4.3.1	Particle backscatter coefficient	34
4.3.2	Particle extinction coefficient	37
4.3.3	Errors of particle backscatter and extinction coefficient	38
4.3.4	Depolarization	39
4.4	Cirrus detection with Leo-Lidar	43
4.4.1	Meteorological data	43
4.4.2	Specular reflection	47
4.4.3	Multiple scattering	48

4.4.4	Determination of cirrus ice water content	51
4.4.5	Analysis scheme	52
5	Lidar cirrus climatology	57
5.1	Macrophysical and synoptic cirrus properties	57
5.2	Cirrus radiative properties	60
5.3	Ice water content	63
5.3.1	IWC climatology	63
5.3.2	Comparison of FISH, CLH, and Leo-Lidar IWC climatologies	64
5.3.3	Cloud detection limits	66
6	Volcanic-ash-induced cirrus	69
6.1	Instrumentation and methodology	70
6.2	The Eyjafjallajökull ash plume	71
6.2.1	Lidar observation	71
6.2.2	Trajectory analysis	73
6.2.3	IN properties	76
6.2.4	Model sensitivity studies	78
6.2.5	Comparison of the observed cirrus cloud with model simulations	82
7	Summary and outlook	85
7.1	Summary	85
7.2	Outlook	87
	Bibliography	89
	Appendix	100
A	Lidar Appendix	101
B	Maid Appendix	119
C	Acknowledgment	123
