Interdomain Functional Dynamics of Phosphoglycerate Kinase Studied by Single-Molecule FRET

Matteo Gabba

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies Band / Volume 81

ISSN 1866-1807 ISBN 978-3-89336-943-0

Contents

Intents and Structure of the Thesis 1

1 Introduction 3

2 Materials 9
2.1 Chemicals . . . 9
2.1.1 List of Chemicals . . . 9
2.1.2 Column Materials . . . 10
2.1.3 Fluorescent Dyes . . . 11
2.1.4 Proteins . . . 11
2.1.5 DNA . . . 12
2.2 Buffers . . . 12
2.3 Consumables . . . 13
2.4 Sample Storage . . . 14
2.5 Slide Preparation Using Sigmacote® . . . 14
2.6 List of the Instruments . . . 14
2.7 List of the Software . . . 16

3 FRET Sample Preparation 17
3.1 Labeling of Phosphoglycerate Kinase . . . 17
3.1.1 Test of the Protein Stability . . . 18
3.1.2 Estimation of the Degree of Labeling . . . 19
3.1.3 Test of the Labeled Sample with FCS . . . 21
3.2 Labeled-DNA Hybridization Protocol . . . 21
3.3 Summary . . . 22

4 Single-Molecule Detection in Solution 23
4.1 The Golden Formulae in SMD . . . 23
4.1.1 Molecular Brightness: f_f . . . 24

4.1.2 Signal-to-background Ratio: SB_0 . . . 26
4.2 Optimal Excitation Intensity . . . 27
4.3 a.u. to Watt Conversion . . . 29
4.4 Summary . . . 29

5 FCS Measurements 31
5.1 Introduction . . . 31
5.2 FCS Principles . . . 32
5.3 Determination of N . . . 33
5.4 Determination of D, R_g and R_h . . . 34
5.5 Precise FCS Measurements . . . 35
5.6 Summary . . . 37

6 Fluorescence Lifetime 39
6.1 Introduction . . . 39
6.2 Microscopic Origin of the Fluorescence Lifetime . . . 39
6.3 Ensemble Fluorescence Lifetime Measurements . . . 41
6.3.1 Multiexponential Model . . . 41
6.3.2 Model for a Gaussian Distribution of Distances . . . 43
6.4 Single-Molecule Lifetime Estimator . . . 44
6.5 Summary . . . 44

7 The Stream of Information in Single-Molecule Measurements 47
7.1 Introduction . . . 47
7.2 Photon Acquisition and Classification: PIE, TCSPC and T3 . . . 47
7.3 Burst Selection Criterion . . . 49
7.4 Multiparameter Fluorescence Detection - MFD . . . 50
7.5 MATLAB Scripts . . . 50
7.6 Frequency Histograms and Optimal Single-Molecule Experimental Conditions . . . 51
7.7 Summary . . . 52

8 Analysis of smFRET Measurements with 1D and 2D Frequency Histograms 53
8.1 Introduction . . . 53
8.2 Förster Resonance Energy Transfer - FRET . . . 53
8.3 Single-Molecule FRET Indicators: E and F' . . . 55
8.4 Broadening of the p(E) and p(F') Distributions . . . 56
8.5 1D FRET Efficiency Histograms . . . 57
8.6 2D Plots (F' vs. τ_{DA}): Static Line . . . 58

8.6.1 Dye Quenching . . . 58
8.6.2 Fast Dynamics: "Corrected" Static Line . . . 59
8.6.3 Slow Dynamics: 2-State Dynamic Line . . . 60
8.7 MATLAB Scripts . . . 61
8.8 Summary . . . 62

9 Measurements of ϕ, τ_{D0}, α, R_0 and g' 63
9.1 Introduction . . . 63
9.2 General Strategy for the Parameters Estimation . . . 63
9.2.1 PGK . . . 63
9.2.2 DNA . . . 64
9.3 Fluorescence Quantum Yield: ϕ . . . 64
9.3.1 The Working Equations . . . 64
9.3.2 Cross-Calibration of the Reference Dyes . . . 67
9.3.3 Quantum Yield Ratio: γ' . . . 68
9.4 Donor Only Fluorescence Lifetime: $\langle\tau_{D0}\rangle_f$ . . . 70
9.5 Cross-Talk: α . . . 70
9.6 Förster Radius: R_0 . . . 71
9.7 Detection Efficiency Ratio: g' . . . 72
9.7.1 The Working Equation . . . 72
9.7.2 The Calibration Measurement . . . 73
9.7.3 Daily Correction . . . 73
9.8 Summary . . . 74

10 PGK Interdomain Dynamics 75
10.1 Introduction . . . 75
10.2 The Substrates . . . 75
10.3 Ensemble Lifetime FRET Measurements . . . 76
10.4 Single-Molecule FRET Measurements . . . 77
10.4.1 Ligand-Free PGK . . . 78
10.4.2 Liganded PGK . . . 80
10.4.3 The Energy Landscape of PGK . . . 82
10.5 FCS Measurements and Average Burst Duration . . . 87
10.6 Normal Mode Analysis (NMA) and a Coarse-Grained Simulation . . . 91

11 Conclusions 95

Appendices 101

A Single-Molecule Detection in Solution **103**
A.1 Power Series Measurements . . . 103

B Fluorescence Lifetime **109**
B.1 Single-Molecule Lifetime Estimator . . . 109
B.2 Single-Molecule Lifetime Estimator with Multiple Detection Channels . . . 110
B.3 Single-Molecule Lifetime Bias Correction . . . 111

C Analysis of smFRET Measuraments with 1D and 2D Frequency Histrograms **115**
C.1 Derivation of Eq.8.4 . . . 115
C.2 Derivation of Eq.8.8 . . . 116
C.3 Variance of the FRET Efficiency Distribution . . . 116
C.3.1 Shot-Noise Variance: σ^2_{SN} . . . 116
C.3.2 Acceptor Quantum Yield Variance: $\sigma^2_{\phi_A}$ . . . 117
C.3.3 Conformational Variance: σ^2_r . . . 118
C.4 "Corrected" Static Line and Dynamic Line . . . 119
C.4.1 "Corrected" Static Line . . . 119
C.4.2 2-State Dynamic Line . . . 120

D Measurements of ϕ, τ_{D0}, α and g' **121**
D.1 Cross-Calibration of the Reference Dyes . . . 121
D.2 Justification of Eq.9.7 . . . 122
D.3 Correction of the Emission Spectra . . . 123
D.4 Measurement of the Quantum Yield with the Confocal Microscope . . . 124
D.4.1 "Lifetime Method" . . . 125
D.4.2 "Brightness Method" . . . 125
D.4.3 Best Estimate of the Quantum Yields of Single-Labeled Samples . . . 126
D.4.4 The Quantum Yield Ratio: γ' . . . 128
D.4.5 Correction for PGK's Substrate Effects . . . 129
D.5 Measured Absorption and Emission Spectra for Quantum Yield Calculation . . . 131
D.6 Measurement of the Detection Efficiency Ratio: g' . . . 136
D.6.1 eTCSPC Measurements . . . 136
D.6.2 smFRET Calibration Measurement with dlDNA . . . 136
D.6.3 Daily Correction . . . 137
D.6.4 Figures . . . 138

E PGK Interdomain Dynamics **141**
E.1 Preparation of the Substrate's Stock Solutions . . . 141

E.2 Fit of the eTCSPC Histograms . . . 141
E.3 smFRET Measurements . . . 144
E.3.1 smFRET Measurements with dlPGK . . . 144
E.3.2 Fit of the 1D Efficiency Histograms . . . 144
E.3.3 Correction of the Apparent Inter-Dye Distances . . . 145
E.3.4 Calculation of σ^2_{SN} and $\sigma^2_{\phi_A}$ . . . 146
E.3.5 "Corrected" Static Line, Dynamic Line and 2D-Plots . . . 149
E.3.6 Conformational Variance of the Open State . . . 151
E.3.7 The State Occupation Probabilities at the Equilibrium . . . 152
E.3.8 The Kinetic Equilibrium Constants . . . 153
E.3.9 The Opening and Closing Activation Barriers . . . 154
E.4 Viscosity of the Substrates Solutions . . . 155
E.5 Refractive Index Mismatch Correction . . . 156
E.6 Calculation of the Average Burst Duration . . . 157
E.7 A Coarse-Grained Model of PGK Interdomain Dynamics . . . 157
E.7.1 The Elastic Network Model of PGK . . . 158
E.7.2 Random MPC Simulations . . . 159
E.7.3 The Accessible Volume Description of the Dyes . . . 159
E.7.4 Calculation of the Physical Parameters . . . 160

Bibliography **161**

Summary **173**

Zusammenfassung **175**

Acknowledgments **177**

Ringraziamenti **179**
