## Content

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Summary</b>   | <b>1</b>  |
| 1.1.     | Summary English  | 1         |
| 1.2.     | Summary German   | 2         |
| <b>2</b> | <b>Introduction</b>  | <b>4</b>  |
| 2.1.     | <i>Corynebacterium glutamicum</i> - A versatile microbial factory  | 4         |
| 2.2.     | Biosynthesis of L-methionine in <i>C. glutamicum</i>   | 5         |
| 2.3.     | Strategies for strain development  | 8         |
| 2.4.     | Genetically-encoded biosensors   | 10        |
| 2.5.     | Population heterogeneity in bacterial monocultures   | 12        |
| 2.6.     | Aims of this work  | 14        |
| <b>3</b> | <b>Results</b>   | <b>15</b> |
| 3.1.     | Lrp of <i>Corynebacterium glutamicum</i> controls expression of the <i>brnFE</i> operon encoding the export system for L-methionine and branched-chain amino acids | 18        |
| 3.2.     | The development and application of a single-cell biosensor for the detection of L-methionine and branched-chain amino acids  | 30        |
| 3.3.     | Destabilized eYFP variants for dynamic gene expression studies in <i>Corynebacterium glutamicum</i>  | 40        |
| 3.4.     | L-methionine producing mutants of <i>Corynebacterium glutamicum</i> isolated by biosensor-based high throughput-screening  | 47        |
| 3.5.     | Application of a genetically-encoded biosensor for the single cell analysis of <i>Corynebacterium glutamicum</i> L-valine production strains                       | 56        |
| 3.6.     | Development and application of genetically-encoded biosensors for strain development and single cell analysis of <i>Corynebacterium glutamicum</i>                 | 74        |
| <b>4</b> | <b>Discussion</b>  | <b>97</b> |
| 4.1.     | Implementation of the Lrp-biosensor in FACS-based HT screenings  | 97        |
| 4.2.     | Towards L-methionine overproduction  | 100       |

---

|          |   |            |
|----------|---|------------|
| 4.3.     | Online monitoring of amino acid production  | 104        |
| 4.4.     | Biosensor-based live cell imaging   | 104        |
| 4.5.     | Limitations of the sensor system  | 107        |
| <b>5</b> | <b>References</b>   | <b>109</b> |
| <b>6</b> | <b>Appendix</b>   | <b>118</b> |
| 6.1.     | Supplemental information (SI) - The development and application of a single-cell biosensor for the detection of L-methionine and branched-chain amino acids | 118        |
| 6.2.     | Supplemental information (SI) - L-methionine producing mutants of <i>Corynebacterium glutamicum</i> isolated by biosensor-based high throughput-screening   | 126        |
| 6.3.     | Deletion of the aconitase gene in <i>Corynebacterium glutamicum</i> causes strong selection pressure for secondary mutations inactivating citrate synthase  | 128        |
