<b>Contents</b>	<b>13</b>
<b>List of Abbreviations</b>	<b>17</b>
<b>List of Figures</b>	<b>19</b>
<b>List of Tables</b>	<b>23</b>
<b>1 Introduction</b>	<b>25</b>
<b>2 Technical setup</b>	<b>37</b>
2.1 The TEXTOR tokamak . . . . .	37
2.2 Overview of LIAS experimental setup at TEXTOR . . . . .	38
2.3 Sample holder . . . . .	41
2.4 Laser system and beam path . . . . .	42
2.5 Timing of laser and diagnostics with TEXTOR operation . . . . .	43
2.6 Overview of camera observation systems . . . . .	44
2.6.1 Wavelength and neutral filters . . . . .	44
2.7 Phantom v711 fast camera . . . . .	45
2.8 "Spectrelle" high resolving spectrometer . . . . .	46
2.9 Radially resolving spectrometer . . . . .	47
2.10 AvaSpec-2048 ("Spec4") overview spectrometer . . . . .	48
2.10.1 Correction for field of observation . . . . .	48
<b>3 The laser ablation process with a view to LIAS</b>	<b>51</b>
3.1 Overview of the laser ablation process . . . . .	51
3.1.1 Atoms removed per shot . . . . .	53
3.1.2 Abundances . . . . .	55

3.1.2.1	Neutrals/ions . . . . .	55
3.1.2.2	Ratio of Atoms/molecules/clusters/macroscopic particles . . . . .	55
3.1.3	Velocity distribution of ablated particles . . . . .	56
3.1.4	Influence of magnetic field on ablation process . . . . .	58
<b>4</b>	<b>Experimental investigation of the ablation process</b>	<b>61</b>
4.1	Sample materials . . . . .	61
4.1.1	Bulk materials . . . . .	61
4.1.2	a-C:D deposit on polished tungsten . . . . .	63
4.2	Method to determine LIAS velocity profiles from fast camera measurements . . . . .	63
4.3	Velocity profile measurements . . . . .	65
<b>5</b>	<b>Plasma edge conditions in TEXTOR</b>	<b>73</b>
5.1	Overview of plasma edge physics in a limiter tokamak . . . . .	73
5.1.1	Analytical formula for density and temperature profiles . . . . .	75
5.1.2	Computing the heat flux value in radial direction . . . . .	75
5.1.3	Uncertainties in plasma parameter measurements due to different measurement and sample position . . . . .	76
5.2	TEXTOR plasma edge characterization . . . . .	76
5.3	Helium beam method for plasma temperature and density measurements . . . . .	77
5.4	Analysis of Helium beam measurements for experimental conditions in this work . . . . .	78
<b>6</b>	<b>Fundamentals of injected material – plasma edge interaction</b>	<b>85</b>
6.1	Overview of atomic processes in a plasma . . . . .	85
6.2	The situation for LIAS: Fast neutral particles entering the plasma edge	87
6.3	The penetration depth and ionization time . . . . .	88
6.4	Line emission due to excitation . . . . .	89
6.5	Ionization rates . . . . .	89
6.5.1	Neutral Tungsten . . . . .	89
6.5.2	Neutral Carbon . . . . .	90
6.6	Photon emissivity coefficients . . . . .	90
6.6.1	Neutral Tungsten emission . . . . .	91
6.6.2	Neutral Carbon emission . . . . .	91
6.7	The concept of photon efficiency . . . . .	93
6.8	S/XB data . . . . .	95

6.9	Determination of plasma perturbation from hydrogen line intensity ratios . . . . .	96
<b>7</b>	<b>Experimental investigation of ablated material-plasma interaction</b>	<b>101</b>
7.1	First results for LIAS on mixed and hydrocarbon layers . . . . .	101
7.2	Time resolved LIAS measurements and temporal separation of LIAS and LIBS . . . . .	105
7.2.1	Tungsten bulk material . . . . .	105
7.2.2	Time resolved LIAS measurements of carbon atoms, ions and molecules . . . . .	106
7.2.2.1	Separation of LIBS and LIAS . . . . .	106
7.2.2.2	Neutral and molecular emission . . . . .	107
7.3	LIAS timescale measurements . . . . .	109
7.4	Time integrated radial emission profile . . . . .	116
7.4.1	Tungsten . . . . .	116
7.4.2	Carbon . . . . .	118
7.5	Determination of $H_{\alpha}$ LIAS photon efficiencies for a-C:D layers . . . . .	119
7.5.1	Method A: Determination of number of ablated atoms . . . . .	121
7.5.1.1	Crater area measurements . . . . .	121
7.5.1.2	Determination of layer inventory . . . . .	121
7.5.2	Method B: Quantitative measurement of LIAS photons . . . . .	124
7.5.2.1	Radiometric calibration in TEXTOR . . . . .	124
7.5.2.2	Determination of the spectral response curve $\beta$ with uniform spherical light sources . . . . .	128
7.5.2.3	Observation beam path transmission measured with overview spectrometers . . . . .	133
7.5.2.4	Absolute calibration for higher orders . . . . .	135
7.5.3	Combined result: LIAS photon efficiency measurements . . . . .	135
7.6	Experimental investigation of plasma perturbation by ablated material	138
7.6.1	Variation of injected amount per pulse . . . . .	138
7.6.2	Observation of $H_{\gamma}/H_{\delta}$ emission intensity ratio . . . . .	141
<b>8</b>	<b>Analytical description of plasma perturbation due to injected impurities</b>	<b>147</b>
8.1	Overview . . . . .	147
8.2	A simple description of local plasma perturbation by laser ablation . . . . .	148
8.2.1	Energy balance . . . . .	148
8.2.2	Particle balance . . . . .	149
8.2.3	Quasi-neutrality condition . . . . .	150
8.2.4	System of equations and numerical solution . . . . .	150

8.3	Results of the plasma perturbation model . . . . .	151
8.3.1	Variation of $A_k^{\parallel}$ . . . . .	151
8.3.2	Local plasma parameter as function of injected atoms . . . . .	152
<b>9</b>	<b>Monte Carlo modeling of the material plasma interaction</b>	<b>157</b>
9.1	Description . . . . .	157
9.1.1	Comparison of Monte Carlo code with analytical computation	160
9.2	Comparison of measured radial emission profiles with Monte Carlo code simulations . . . . .	160
9.2.1	Tungsten . . . . .	160
9.2.2	Carbon . . . . .	165
<b>10</b>	<b>Discussion of results</b>	<b>173</b>
10.1	Outlook . . . . .	179
	<b>Bibliography</b>	<b>181</b>
<b>A</b>	<b>Outline of plasma perturbation calculation provided by Mikhail Tokar</b>	<b>193</b>
<b>B</b>	<b>ADAS ionization rate output for atomic carbon</b>	<b>195</b>
