High Temperature Corrosion of Alloys and Coatings in Gas-Turbines Fired with Hydrogen-Rich Syngas Fuels

Wojciech Nowak

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 239

ISSN 1866-1793

ISBN 978-3-95806-012-8

1	Introduction:	5
1.1	Energy demand and requirements of environmental protection	5
1.2	Gas turbine materials	7
1.2.1	Ni-base superalloys	9
1.2.2	Oxidation resistant coatings	12
1.2.3	TBC systems	13
2	Degradation of gas turbine components due to high-temperature oxidation	16
2.1	General remarks.....	16
2.2	Thermodynamic considerations.....	17
2.3	Oxidation kinetics.....	19
3	Aims and outline of the present studies:	22
4	Scale formation on Ni-base alloys and coatings systems:.....	24
4.1	General background.....	24
4.2	Oxidation behaviour of chromia forming alloys in the presence of water vapour	27
4.2.1	Effect of the test atmosphere on the chromia scale growth mechanisms	27
4.2.2	Effect of H ₂ O on selective oxidation of Cr	29
4.2.3	Effect of H ₂ O in the atmosphere on Cr ₂ O ₃ -evaporation	30
4.3	Oxidation behaviour of alumina forming superalloys	32
4.3.1	Effect of H ₂ O on transient oxide formation	32
4.3.2	Effect of H ₂ O in the test gas on the scale adherence	33
4.4	Oxidation behaviour of MCrAlY alloys and coatings	34
4.4.1	Effect of MCrAlY-coating composition and microstructure on oxidation resistance	34
4.4.2	Effect of manufacturing parameters on the MCrAlY-coating oxidation behaviour	35
4.5	Oxidation of TBC systems	38
4.5.1	EB-PVD TBC's	38
4.5.2	APS TBC's.....	39
5	Experimental:	43
5.1	Studied materials and geometry of the specimens.....	43

5.1.1	Chemistry of the materials	43
5.2	Specimens preparation.....	45
5.2.1	Ni-based superalloys (uncoated)	45
5.2.2	Free standing MCrAlY coating	46
5.2.3	TBC specimens	47
5.3	Oxidation experiments.....	47
5.3.1	Isothermal and discontinuous oxidation.....	47
5.3.2	Accelerated cyclic oxidation tests	49
5.3.3	Thermogravimetric (TG) experiments	50
5.4	Characterisation of oxidized specimens	50
5.4.1	Bondcoat roughness evaluation using fractal analysis.....	51
5.4.2	Basics of fractal analysis.....	52
5.4.3	Procedure of bondcoat roughness evaluation using fractal analysis.....	53
6	Oxidation behaviour of Rene 80	55
6.1	Short-term exposures of Rene 80	55
6.1.1	Oxidation kinetics	55
6.1.2	Analytical studies of Rene 80.....	58
6.1.2.1	Early stages of oxidation; 1 hour exposures	58
6.1.2.2	Scale composition after 50 hour exposures	63
6.1.2.3	Scale microstructure after 100 hours exposures	68
6.1.3	Effect of H ₂ O on oxidation of Rene 80 in air based atmospheres.....	72
6.2	Long-term exposure of Rene 80	76
6.2.1	Oxidation kinetics	76
6.2.2	Microstructure features after long term oxidation.....	77
6.3	Discussion of Rene 80 oxidation behaviour	83
6.3.1	General aspects of oxide scale formation on Rene 80	83
6.3.2	Effect of pO ₂ in the test gas on the oxide scale formation on Rene 80.....	89
6.3.3	Effect of water vapour on oxidation behaviour in Ar-O ₂ based gases.....	95
6.3.4	Effect of water vapour on oxidation behaviour in air based gases	96
6.3.5	Boron incorporation into the scale and its depletion from the bulk alloy.....	98
7	Free standing MCrAlY coatings	105
7.1	General remarks.....	105
7.2	As-received conditions	105
7.3	Thermogravimetric tests of ground MCrAlY coatings.....	106
7.3.1	Oxidation kinetics	106

7.3.2	Analytical studies of free-standing MCrAlY coating	108
7.4	Discontinuous oxidation of the ground free standing MCrAlY coatings.....	112
7.4.1	Oxidation kinetics	112
7.4.2	Analytical studies	112
7.5	Discontinuous oxidation of as-sprayed HVOF MCrAlY coating surfaces	114
7.5.1	Analytical studies	114
7.6	Discussion on coating oxidation:.....	115
8	APS-TBC systems.....	122
8.1	As-sprayed conditions	123
8.2	Accelerated cyclic oxidation tests at 1120°C	125
8.2.1	Lifetime data	125
8.2.2	Microstructural characterisation of TBC systems after failure	126
8.2.3	Discussion of results obtained in accelerated cyclic oxidation testing	129
8.2.4	Parameters determining APS TBC's lifetime	132
8.2.5	Standard methods for bondcoats roughness evaluation	133
8.2.6	Results of bondcoat roughness evaluation using fractal analysis	135
8.2.7	Discussion of results obtained by fractal analysis.....	136
8.2.8	Proposed failure mechanisms.....	137
8.3	Lifetime oxidation tests at 1050°C in dry and wet atmospheres	141
8.3.1	Lifetime results.....	141
8.3.2	Microstructural characterisation.....	143
8.3.3	Effect of water vapour on failure mechanisms of TBC-systems	152
8.3.3.1	General remarks.....	152
8.3.3.2	Discussion of TGO formation and failure in dry and wet air	153
8.3.3.2.1	State of the art TBC systems with HVOF and VPS bondcoats	153
8.3.3.2.2	TBC systems with HVOF bondcoat roughness improved by APS-flashcoat.	
.....	155
8.3.3.2.3	Summary of water vapour effects on TGO formation	159
8.3.3.3	Water vapour interaction with the topcoats	161
8.3.3.3.1	Investigation of ceramic YSZ powders used for topcoat spraying	161
8.3.3.3.2	Investigation of sprayed topcoats.....	166
8.3.3.3.3	Discussion of possible water vapour effects on topcoat properties	178
9	Summary and conclusions.....	181
