Contents

Abbreviations.....	1
1 Introduction.....	2
1.1 Host crop <i>Beta vulgaris</i>	2
1.2 Pathogen <i>Cercospora beticola</i>	7
1.3 Breeding for Plant Resistance.....	9
1.4 Disease Detection.....	11
1.4.1 Imaging spectroscopy.....	11
1.4.2 Magnetic resonance imaging.....	13
1.5 Research objectives of this thesis.....	15
2 Materials and Methods	17
2.1 Plant genotypes	17
2.2 Chemicals	17
2.3 Equipment.....	17
2.4 Software programs.....	19
2.5 Cultivation of biological material.....	19
2.5.1 Plant cultivation	19
2.5.2 Chemical plant protection	21
2.6 Fungal material and propagation	21
2.7 Inoculation procedure.....	22
2.7.1 Inoculum preparation.....	22
2.7.2 Inoculation approach	22
2.8 Measurements of leaf area	23
2.9 Harvesting of plant material	23
2.10 Digital photography.....	23
2.11 Microscopy.....	24
2.12 Visual disease scoring	24
2.13 Leaf wax analysis	25
2.13.1 Harvesting of plant material.....	25
2.13.2 Sample preparation.....	25
2.13.3 Measurement parameters	26
2.13.4 Compound identification and quantification.....	26
2.14 Taproot carbohydrate analysis.....	26

2.14.2 Sample and enzyme preparation	26
2.14.3 Enzymatic carbohydrate analysis	27
2.14.4 Data analysis	28
2.15 Fungal growth analysis	28
2.15.3 DNA isolation	29
2.16 Magnetic Resonance Imaging (MRI)	31
2.17 Photosynthetic efficiency analysis	34
2.17.1 Measurement parameters of greenhouse experiment	34
2.17.2 Data analysis of the Monitoring-PAM fluorometer	34
2.18 Spectral Imaging	34
2.18.3 The HyperART system	35
2.18.4 Measurement parameters of the HyperART system	36
2.19 Summary of conducted experiments	37
2.20 Statistical data analysis	40
3 Results	41
3.1 Disease development in controlled environment and in the field	41
3.2 Disease progression and effect on biomass development	44
3.2.1 Disease progression	44
3.2.2 Effect on taproot biomass and sucrose content	47
3.2.3 Effects of disease progression on biomass	50
3.3 Influence of leaf waxes on plant resistance	51
3.4 Fungal growth in leaf tissue	56
3.5 Photosynthetic efficiency during foliar infestation	60
3.6 Spectral measurements of sugar beet leaves during fungal infestation	64
3.6.1 <i>Cercospora</i> -induced changes of leaf reflectance in the field	64
3.6.2 <i>Cercospora</i> -induced changes of leaf reflectance and transmittance during disease onset in controlled environment	67
3.7 Fungal effects on taproot growth	72
3.7.1 Responses of the STD HS and LS genotypes during disease progression	72
3.7.2 Root response of the STD HS genotype during foliar disease	78
3.7.3 Responses of breeding lines to foliar disease	81
3.7.4 Effects of disease severity on taproot growth	84

4 Discussion	85
4.1 Taproot response of sugar beets to CLS	85
4.1.1 Sugar beets reacted to CLS inoculation with a rapid response in taproot growth	85
4.1.2 What factors triggered the rapid response in taproot growth?	88
4.2 Shoot response of sugar beets depends on plant susceptibility.....	90
4.2.1 How did the fungus develop in the leaf tissue of contrasting sugar beet genotypes?	90
4.2.2 How did the environment affect defense ability of sugar beets?.....	92
4.2.3 How strongly can selected sugar beet germplasm tolerate <i>Cercospora</i> infections?.....	93
4.3 Importance of cuticular waxes on plant susceptibility.....	95
4.4 <i>Cercospora</i> altered the spectral signature of sugar beet leaves	97
5 Conclusions.....	99
5.1 Taproot response	99
5.2 Shoot response.....	99
5.3 The impact of cuticular waxes.....	100
5.4 Spectral signature changes.....	100
5.5 Potential assistance for breeding approaches	101
6 Publications and Posters	102
7 List of Figures.....	103
8 List of Tables	108
9 References	108
10 Attachment	119
10.1 BLAST analysis	119
Acknowledgements	120
