Failure Analysis of Thin Film Solar Modules using Lock-in Thermography

Max Henrik Siegloch

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 258

ISSN 1866-1793

ISBN 978-3-95806-047-0

Table of Contents

Abstract	III
Kurzfassung	V
Table of Contents.....	VII
List of Figures	IX
List of Tables	XI
List of Abbreviations	XII
1 Introduction	1
2 Thin film silicon solar cells and modules	3
2.1 Design of thin film silicon solar modules	3
2.2 Equivalent circuit model of solar cells and modules.....	6
2.3 Differences to crystalline wafer solar cells	9
2.4 Origin of heat dissipation in silicon p/i/n-solar modules	12
3 Lock-in Thermography on thin film solar cells and modules	21
3.1 Infrared radiation and its detection with thermography	21
3.2 Lock-in signal generation.....	25
3.3 Error sources in the lock-in process	31
3.3.1 Matching of correlation coefficient.....	31
3.3.2 Distribution of correlation bases	33
3.3.3 Reliable detection of amplitude and phase.....	36
3.4 Setup and methods	39
3.4.1 LIT setup	39
3.4.2 State-of-the-art LIT methods.....	42
3.5 LIT signals of thin film solar cells	43
4 Defect analysis of thin film solar modules with basic LIT methods	47
4.1 Basic measurement strategies.....	47
4.2 Scaling of Vomo-LIT images.....	51
4.3 Analysis of local shunt and series resistances in thin film solar cells by LIT	52
4.4 Origin of shunts in thin film silicon solar cells	57
4.5 “Shunt bursting” – consequences of reverse voltage biasing on thin film silicon solar cells	61
4.6 Basic Limo-LIT measurement techniques used on thin film solar modules.....	64

4.7	Detecting LIT signals through glass encapsulation.....	67
5	Simulation of the theoretical LIT signal of thin film solar cells	71
5.1	Thermal model of thin film solar cells and calculation of the heat diffusion differential equation	71
5.2	Analysis of phase information of LIT signals	75
5.2.1	Mechanisms causing the global phase of LIT images.....	75
5.2.2	Additional phase shift due to transients over many lock-in periods	77
5.3	Theoretical frequency response of thin film solar cells and modules	77
6	Deconvolution of power generation from heat diffusion with a self-calibrating LIT system.....	83
6.1	The deconvolution method.....	83
6.2	Deconvoluting the LIT signal of practical devices	84
6.3	Realization of a self-calibrating LIT system	88
6.3.1	Setup.....	89
6.3.2	Evaluation of the measured heat diffusion profile	89
6.3.3	Self-calibration on a sample with an artificial shunt.....	93
7	Quantitative interpretation of Limo-LIT signals and images.....	99
7.1	Power density scaling of Limo-LIT signals	99
7.2	Overview of known and new developed LIT methods	104
7.3	Evaluation of cell voltages with Vomo-ILIT	107
7.3.1	Vomo-ILIT from $V = 0$ to V_{MPP} (R_s -ILIT).....	107
7.3.2	Vomo-ILIT from $0 < V < V_{MPP}$ to V_{MPP}	109
7.3.3	Vomo-ILIT at voltages between V_{MPP} and V_{OC}	111
7.4	Realistic evaluation of defects with power-neutral Vomo-ILIT around V_{MPP} ...	113
8	Discussion and Conclusions.....	121
	Bibliography.....	125
	Acknowledgements	131
