|----------|---------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction and Objectives</b>                                  | <b>1</b>  |
| <b>2</b> | <b>Current Knowledge and Future Demands</b>                         | <b>3</b>  |
| 2.1      | Gas Turbines . . . . .                                              | 3         |
| 2.2      | Thermal Barrier Coating Systems (TBCs) . . . . .                    | 5         |
| 2.2.1    | Superalloys of Turbine Engine Parts . . . . .                       | 6         |
| 2.2.2    | Bond Coat and Thermally Grown Oxide (TGO) . . . . .                 | 8         |
| 2.2.3    | Ceramic Top Coat . . . . .                                          | 11        |
| 2.2.4    | Alternative Ceramic Top Coat Materials . . . . .                    | 18        |
| 2.3      | Pyrochlores . . . . .                                               | 20        |
| 2.3.1    | Crystal Structure and Low Thermal Conductivity Relations . . . . .  | 20        |
| 2.3.2    | High Temperature Phase Stability . . . . .                          | 24        |
| 2.3.3    | CTEs . . . . .                                                      | 26        |
| 2.3.4    | Sintering Resistance . . . . .                                      | 28        |
| 2.3.5    | CMAS Resistance, Hot Corrosion and Erosion Behaviors . . . . .      | 29        |
| 2.3.6    | Implementation Related Issues and Considered Solutions . . . . .    | 32        |
| 2.3.7    | Summary of Merits and Issues . . . . .                              | 38        |
| <b>3</b> | <b>Experimental Methods and Materials</b>                           | <b>41</b> |
| 3.1      | Feedstock . . . . .                                                 | 41        |
| 3.2      | Thermal Spraying . . . . .                                          | 42        |
| 3.2.1    | Deposition of Top Coats, Bond Coats and Single Splats . . . . .     | 42        |
| 3.2.2    | Particle Diagnostics . . . . .                                      | 43        |
| 3.3      | Characterization . . . . .                                          | 44        |
| 3.3.1    | Mercury Intrusion Porosimetry (MIP) . . . . .                       | 44        |
| 3.3.2    | X-ray Diffraction (XRD) . . . . .                                   | 45        |
| 3.3.3    | Time of Flight-Secondary Ion Mass Spectroscopy (TOF-SIMS) . . . . . | 46        |
| 3.3.4    | Thermomechanical Analysis (TMA) . . . . .                           | 47        |
| 3.3.5    | Laser Flash Method . . . . .                                        | 52        |
| 3.3.6    | Thermal Cycling Test . . . . .                                      | 53        |
| 3.3.7    | Microscopy . . . . .                                                | 54        |

|          |                                                                                           |            |
|----------|-------------------------------------------------------------------------------------------|------------|
| <b>4</b> | <b>Results and Discussion Part 1: Microstructure, Composition and Lifetime Relations</b>  | <b>55</b>  |
| 4.1      | General Understanding of GZO Processing and its Relation to Lifetime . . .                | 55         |
| 4.1.1    | Particle Temperature Measurements as an Approach for Spray Current Optimization . . . . . | 56         |
| 4.1.2    | Porosity and Microstructure of GZO Coatings . . . . .                                     | 57         |
| 4.1.3    | Phase Composition of the GZO Coatings . . . . .                                           | 60         |
| 4.1.4    | Chemical Composition of the GZO Coatings and Single Splats . . .                          | 61         |
| 4.1.5    | Thermal Cycling Lifetime of YSZ/GZO Double Layer TBCs . . . .                             | 67         |
| 4.1.6    | Phase Composition of the Thermally Cycled GZO Coatings . . . .                            | 71         |
| 4.2      | Detailed Relations of Microstructural Features and Lifetime of GZO . . .                  | 72         |
| 4.2.1    | Particle Temperature Measurements . . . . .                                               | 72         |
| 4.2.2    | Porosity and Microstructure Analysis . . . . .                                            | 74         |
| 4.2.3    | Crystallographic Evaluations . . . . .                                                    | 79         |
| 4.2.4    | Thermal Cycling Lifetime . . . . .                                                        | 81         |
| <b>5</b> | <b>Results and Discussion Part 2: Thermophysical and Thermomechanical Properties</b>      | <b>85</b>  |
| 5.1      | CTE and Thermal Conductivity of Plasma-Sprayed GZO Coatings . . . .                       | 85         |
| 5.2      | Elastic Behavior and Creep Processes in Plasma-Sprayed YSZ and GZO Coatings . . . . .     | 89         |
| 5.2.1    | Temperature Dependent Young's Modulus and Viscosity . . . . .                             | 89         |
| 5.2.2    | Elastic Modulus and Viscosity as a Function of Load Duration . . .                        | 96         |
| 5.2.3    | Time Evolution of the Young's Modulus of GZO Coatings . . . . .                           | 99         |
| <b>6</b> | <b>Summary and Concluding Remarks</b>                                                     | <b>105</b> |
| <b>7</b> | <b>Acknowledgements</b>                                                                   | <b>131</b> |
