Modelling Thermodynamic Properties of Intercalation Compounds for Lithium Ion Batteries

Siaufung Oliver Dang

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment Band / Volume 319

ISSN 1866-1793 ISBN 978-3-95806-141-5

Contents

Abstract **iii**

Zusammenfassung **v**

1 Introduction **1**

1.1 The framework of this thesis 1
1.2 Concept of electrochemical energy storage 4
1.3 Lithium Ion batteries 6
1.4 The solid electrolyte interface 8
1.5 The Graphite anode 10
1.6 Layered oxides as intercalation cathode materials 10
1.7 Properties of $LiCoO_2$ 12
1.7.1 Structural stability 12
1.7.2 The metal-to-insulator transition of $LiCoO_2$ 17
1.7.3 Behaviour at elevated temperatures 18
1.8 Mg-Si-alloys as alloying anode material 19
1.9 The voltage window 22

2 Theory **25**

2.1 Thermodynamic potentials 25
2.2 Equation of states 27
2.3 Electron wave functions 28
2.3.1 Electrons in a periodic solid 28

2.4 Concepts of solid state physics 30
2.4.1 The harmonic oscillator 30
2.4.2 The origin of thermal expansion 31
2.4.3 Lattice dynamics 33

3 Ab initio computation **39**
3.1 The basics about Density Functional Theory 40
3.2 Spin in DFT 43
3.3 The exchange functional 44
3.4 Treating strongly correlated systems within DFT 46
3.5 The pseudopotential and PAW method 48
3.6 Brillouin zone integration 51
3.7 Phonon calculations 52
3.7.1 Finite difference method 53
3.7.2 Linear response method 54
3.7.3 Harmonic phonon calculations 55
3.7.4 The quasi-harmonic approximation 56
3.8 Cluster expansion 58
3.8.1 The correlation function 60
3.8.2 The Collony-Williams inversion 60
3.8.3 The quality of a cluster expansion 62

4 Modelling **63**
4.1 Computational details 63
4.1.1 The Metal-to-insulator transition 63
4.1.2 Calculating heat capacities for Li_xCoO_2 65
4.1.3 Cluster expansions on Li_xMg_2Si 66
4.2 Results & discussion 67
4.2.1 Mapping the metal-to-insulator two-phase region . . . 67
4.2.2 Heat capacities within the QHA 76
4.2.3 Cluster expansion of Li_xMg_2Si 90

5 Summary and outlook **95**

Bibliography **111**

Thank you **121**

Appendices **123**

A A short guide to running the codes 123

A1 The VASP input files 123

A2 The Phonopy code 124

A3 alloy theoretic automated toolkit (ATAT) 127

B Supplementary data 130

B1 Heat capacities within the QHA 130

B2 The cluster expansion of Li_xMg_2Si 133
