CONTENT

1	SUMMARY	1
1.1	English Summary	1
1.2	German Summary	2
2	INTRODUCTION	3
2.1	Microbial cell factories – towards a sustainable bioeconomy	3
2.2	Amino acid production using microorganisms	4
2.2.1	L-phenylalanine production in <i>Escherichia coli</i>	5
2.2.2	L-valine production in <i>Corynebacterium glutamicum</i>	7
2.3	Metabolic engineering of microbial factories	8
2.4	Genetically-encoded biosensors	11
2.4.1	RNA aptamer-based biosensors	13
2.4.2	FRET-based biosensors	14
2.4.3	Transcription factor-based biosensors	15
2.5	Aims of this work	16
3	RESULTS	18
3.1	Application of a genetically encoded biosensor for live cell imaging of L-valine production in pyruvate dehydrogenase complex-deficient <i>Corynebacterium glutamicum</i> strains	21
3.2	Biosensor-driven adaptive laboratory evolution of L-valine production in <i>Corynebacterium glutamicum</i>	35
3.3	Urease inactivity increases L-valine production in <i>Corynebacterium glutamicum</i>	49
3.4	Screening of an <i>Escherichia coli</i> promoter library for a phenylalanine biosensor	65
3.5	Transcription factor-based biosensors in biotechnology: current state and future prospects	89
4	DISCUSSION	103
4.1	Biosensors – valuable tools for biotechnology	103
4.1.1	Screening of nature’s toolbox for novel sensor candidates	103
4.1.2	The application of biosensors for single cell studies	105
4.1.3	Limitations of transcriptional regulator-based biosensors	106
4.1.4	Engineering of biosensors for improved and desired characteristics	109

4.2	Novel strategies for engineering microbial cell factories	113
4.2.1	Application of biosensors for high-throughput screening	113
4.2.2	Biosensor-driven adaptive laboratory evolution	117
4.2.2.1	The establishment biosensor-driven adaptive laboratory evolution	117
4.2.2.2	“You get what you screen for”	118
4.2.2.3	Beyond biosensor-driven adaptive laboratory evolution	120
4.3	Future prospects of biosensor applications	121
5	REFERENCES	123
6	APPENDIX	137
6.1	Supplemental information – Application of a genetically encoded biosensor for live cell imaging of L-valine production in pyruvate dehydrogenase complex-deficient <i>Corynebacterium glutamicum</i> strains	137
6.2	Supplemental information – Biosensor-driven adaptive laboratory evolution of L-valine production in <i>Corynebacterium glutamicum</i>	141
6.3	Supplemental information – Urease inactivity increases L-valine production in <i>Corynebacterium glutamicum</i>	149
6.4	Supplemental information – Screening of an <i>Escherichia coli</i> promoter library for a phenylalanine biosensor	155
6.5	Supplemental information – Discussion	160
6.6	Transcriptional regulators in the service of biotechnology	171
