Feasible and Reliable Ab initio Atomistic Modeling for Nuclear Waste Management

George Beridze

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 325

ISSN 1866-1793

ISBN 978-3-95806-151-4

Contents

1	Introduction	1
1.1	Nuclear waste management: current state and prospects of atomistic modeling	1
1.2	Current state of the atomistic modeling of f -materials	5
1.3	Aims and outlook of the thesis	8
2	Computational Methods	12
2.1	An overview of the wave function-based <i>ab initio</i> methods	12
2.2	Density Functional Theory	15
2.2.1	Exchange-Correlation functionals	17
2.2.2	Hybrid functionals	20
2.3	Plane-waves and pseudopotentials	21
2.4	DFT+ U formalism	24
2.4.1	<i>Ab initio</i> calculation of the Hubbard U parameter values	26
2.5	Computing heat capacities of f -materials	31
2.5.1	Computation of the order-disorder transition temperature in pyrochlore	33
3	Applications	35
3.1	Derivation of the Hubbard U parameter values	35
3.1.1	Uranium-bearing compounds	36
3.1.2	Other actinide-bearing compounds	38

3.1.3	Monazite- and xenotime-type ceramics	39
3.1.4	Pyrochlore-type ceramics	42
3.1.5	The Hubbard U parameter values and the problem of band gaps	42
3.2	Structural properties of f -materials	45
3.2.1	Uranium-bearing materials	45
3.2.2	Neptunium-, plutonium- and americium-bearing molecules	49
3.2.3	Monazite- and xenotime-type ceramics	52
3.3	Thermochemical parameters of f -materials	62
3.3.1	Uranium-bearing materials	62
3.3.2	Neptunium-, plutonium- and americium-bearing molecules	73
3.3.3	Monazite- and xenotime-type ceramics	74
3.3.4	Heat capacities of monazite-type ceramics	78
3.3.5	Defect formation energies in pyrochlore-type ceramics	91
3.4	Other application studies	97
4	Conclusions	98
4.1	Achievements of this thesis	98
4.2	Arising problems	102
4.3	Prospects for the future	104
	Bibliography	107
