High-Throughput Live-Cell Imaging for Investigations of Cellular Heterogeneity in *Corynebacterium glutamicum*

Stefan Helfrich

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies

Band / Volume 130

ISSN 1866-1807

ISBN 978-3-95806-167-5

Contents

Acronyms	xiii
Symbols	xv
I Introduction	1
1 Introduction	3
1.1 Project Objectives	5
1.2 Outline	7
2 Data Generation	9
2.1 <i>Corynebacterium glutamicum</i>	10
2.1.1 Morphology, Growth, and Division Behavior	10
2.1.2 Bacteriophages	11
2.1.3 Fluorescence Reporters	12
2.2 Microfluidic Single-Cell Cultivation	14
2.2.1 Operating Microfluidic Devices	16
2.3 Live-Cell Imaging Setup	17
2.4 Central Storage for Biological Image Data: OMERO	19
II Image Analysis	21
3 Preprocessing	27
3.1 Registration	27
3.1.1 Lucas-Kanade Algorithm	29
3.1.2 Pyramid Approach to Subpixel Registration	30
3.1.3 Conclusions	32
3.2 Growth Site Detection	32
3.2.1 Realization of Growth Site Detection	34
3.2.2 Conclusions	35

4	Cell Detection	37
4.1	Histogram-based Approaches	38
4.1.1	Thresholding	38
4.2	Non-histogram-based Approaches	41
4.3	Realization of Cell Detection	44
4.4	Processing Dense Populations with the Shape Index Map	46
4.5	Detecting Cell Clusters	47
4.5.1	Cell Size Filter	48
4.5.2	Convex Hull Filter	49
4.5.3	Size and Convex Hull Filter Combined	49
4.6	Splitting Cell Clusters	49
4.7	Incorporating Additional Knowledge	51
4.7.1	Active Contours and Snakes	52
4.8	Conclusions	54
5	Tracking of Cells in Image Sequences	55
5.1	Single-Particle Tracking	57
5.1.1	Frame-to-Frame Linking	57
5.1.2	Global Track Linking	59
5.2	Probability-Based Approach	61
5.3	Conclusions	63
6	Implementation	65
6.1	ImageJ	65
6.2	General Overview	66
6.3	MultiChannelStackReg_	69
6.4	EdgeDetector	69
6.5	Processing Profiles	69
6.6	Splitting Tool	70
6.7	Snakes	70
6.8	Link to TrackMate	72
6.8.1	OverlayDetector	72
6.8.2	SpotAnalyzer	72
6.8.3	Actions	72
7	Quality Assessment	75
7.1	High Temporal Resolution	76
7.1.1	Preprocessing	76
7.1.2	Cell Detection	77
7.1.3	Tracking	79
7.2	Low Temporal and Spatial Resolution	79
7.2.1	Cell Detection	79
7.2.2	Tracking	80

7.3	Snakes	81
7.4	Conclusions on Quality	81
8	Visualization and Analysis of Lineages	83
8.1	Description of <i>Vizardous</i>	83
8.2	<i>Vizardous</i> Analysis Workflow for SCA	85
8.3	The <i>Vizardous</i> Data Model for Lineage Trees	86
8.3.1	PhyloXML	86
8.3.2	MetaXML	86
8.3.3	The Internal Data Model of <i>Vizardous</i>	88
8.4	Sorting Lineage Trees	89
8.5	Comparing Lineage Trees	91
8.5.1	Tree Comparison Properties	91
8.5.2	Tree Comparison Algorithms	92
8.6	Results and Conclusions	93
III	Applications	95
9	Device Characterization	99
9.1	Nutrient Limitation in Growth Sites	99
9.2	Optimizing Inoculation Procedures for Single Bacteria	101
9.3	Conclusions	103
10	Quantifying Bacterial Growth	105
10.1	Population Growth	105
10.1.1	Quantification of Population Growth in SCA	107
10.1.2	Comparing Quantification Methods	108
10.2	Single-Cell Growth	111
10.2.1	Linear or Exponential Growth Model of <i>C. glutamicum</i> cells?	112
10.3	Conclusions	114
11	Morphology Screening	117
11.1	Screening for Cell Morphology	117
11.2	Results	119
11.2.1	Population Growth	119
11.2.2	Single-Cell Growth	119
11.2.3	Single-Cell Morphology	120
11.3	Discussion	121
11.4	Conclusion	126
12	Modeling SOS and Phage Dynamics	129
12.1	Results	130
12.1.1	Spontaneous Induction of SOS and Prophage CGP3	130

12.1.2 From Continuous Signal to Discrete Cellular State	132
12.1.3 Transient Induction of the SOS Response	132
12.1.4 CGP3 SPI Leads to Cell Death/Senescence	134
12.1.5 Correlation of SOS and prophage induction	134
12.1.6 Generation-Dependency of Spontaneous SOS and Prophage In- duction	136
12.2 Discussion	137
12.3 Population Modeling	140
12.4 Approaching Molecular Modeling of SOS and Phage Dynamics	142
12.4.1 Realization of the Model	142
IV Summary and Outlook	147
13 Summary	149
14 Outlook	151
14.1 Beads for Comparable Fluorescence Intensities	151
14.2 Improve Detection of Regions of Interest	152
14.3 Incorporating Additional Knowledge into the Tracking Process	153
14.4 Centralized Computation	153
V Appendices	155
A Image Analysis	157
A.1 JuNGLE Features	158
A.1.1 Tools / Macros	159
B Visualization	161
B.1 Vizardous Features	161
B.2 Libraries	162
B.3 MetaXML Description	162
C Growth Quantification	167
C.1 Microfluidic Device Cultivation	167
C.2 Quantification Methods	168
D Growth Parameter Correlations	173
E SOS/Phage Modeling	181
E.1 Experimental Procedures	181
E.1.1 Bacterial Strains and Growth Conditions	181
E.1.2 Cloning Techniques	181
E.1.3 Flow Cytometry	181

CONTENTS	xi
E.1.4 Microfluidic Device Cultivation	182
E.1.5 Image Analysis and Data Visualization	182
E.2 Trigger of Phage Induction	183
E.3 Setting of Thresholds for Fluorescence Data	184
E.4 Population Modeling	188
E.5 Molecular Modeling of SOS and Phage Dynamics	189
Bibliography	193
Publications and Further Work	215
