Groundwater recharge in Slovenia

Results of a bilateral German-Slovenian Research project

Mišo Andjelov, Zlatko Mikulič, Björn Tetzlaff,
Jože Uhan & Frank Wendland

Schriften des Forschungszentrums Jülich
Reihe Energie & Umwelt / Energy & Environment

Band / Volume 339

ISSN 1866-1793

ISBN 978-3-95806-177-4

Content

1	Introduction.....	15
1.1	Background.....	15
1.2	Project goals	16
1.3	Area of investigation: Republic of Slovenia.....	17
1.4	Basic hydrologic definitions	20
2	Description of the GROWA model	25
2.1	State of the Art in hydrologic modelling on a nationwide scale.....	25
2.2	Calculation of actual evapotranspiration and total runoff	29
2.2.1	Flat unsealed areas with deep water tables	29
2.2.2	High relief terrains.....	30
2.2.3	Groundwater-affected areas	32
2.2.4	Urban areas	35
2.3	Deriving groundwater recharge	35
2.3.1	Determining BFI values from measured runoff data	36
2.3.2	Identification of runoff effective site conditions	38
2.3.3	Attribution of area differentiated BFI values	40
2.4	Summary of the GROWA model features and input layers.....	42
3	Data preparation and regionalization	44
3.1	Climate data.....	45
3.2	Land cover data	50
3.3	Soil data	54
3.4	Hydrogeological data.....	62
3.5	Topography data	69
3.6	Discharge data.....	70
4	Model results.....	74
4.1	Actual evapotranspiration.....	75
4.2	Total runoff	77
4.3	Predominating runoff components.....	80
4.3.1	Direct runoff	84
4.3.2	Groundwater recharge	86
5	Model validation and verification.....	91

5.1	Total runoff	92
5.2	Groundwater recharge and direct runoff	94
6	Water management implications of groundwater recharge assessment in Slovenia.....	97
7	Extended applications of GROWA-SI model in Slovenia	107
7.1	Groundwater quantitative status assessment annual report ...	107
7.2	River basin management plan.....	109
7.3	Water balance data for various EU and global institutions.....	112
7.4	Groundwater recharge as an environmental indicator	112
7.5	Assessment of climate change impact on groundwater recharge	116
7.6	Groundwater recharge in data driven modelling of groundwater vulnerability to nitrate pollution.....	119
7.7	Nitrogen flux modelling in Slovenia based on GROWA results	121
8	Conclusions and outlook	123
