Table of contents

Abstract	11
Table of contents	13
Abbreviations	15
1. Theoretical background	17
1.1 <i>Corynebacterium glutamicum</i>	17
1.2 Synthetic biology	18
1.2.1 Concept of synthetic biology	18
1.2.2 Chassis, minimal cells and relevant genes	20
1.2.3 Genome reduction toward a chassis	22
1.3 Laboratory automation for bioprocess development	24
1.3.1 Throughput of life sciences experiments	24
1.3.2 A Mini Pilot Plant for bioprocess automation	25
1.4 Aim of this work	28
2. Materials and Methods	31
2.1 Materials	31
2.1.1 Chemicals and enzymes	31
2.1.2 Strains	31
2.1.3 Growth media	31
2.1.4 Robotic platform	32
2.2 Methods	33
2.2.1 Strain libraries	33
2.2.2 Cultivation in microfluidic chips	33
2.2.3 Cultivation in microtiter plates	33
2.2.4 Maximum growth rates from microtiter cultivations	34
2.2.5 Cultivation in lab-scale bioreactors	34
2.2.6 Biomass quantification from bioreactors	35
2.2.7 GC-ToF-MS measurements	35
2.2.8 LC-MS/MS Analytics	36
2.2.9 Differential transcriptome analysis	36
2.2.10 Robotic workflow for automated harvest	37
2.2.11 Automated metabolite quantification	37
3. Results and Discussion	41
3.1 Genetic organization and essential genes in <i>C. glutamicum</i>	41
3.2 Validation of wild type growth characteristics on defined medium	43
3.2.1 Biphasic growth on CGXII medium	43
3.2.2 Identification of a hidden co-substrate in CGXII medium	47
3.2.3 Medium formulation for strain characterization in microtiter plates	49
3.3 Handling and robot-assisted characterization of large strain libraries	52
3.3.1 Workflow to store and characterize large strain libraries	52
3.3.2 Standardized data analysis	55
3.3.3 Triggered harvesting of cell-free supernatants from BioLector cultivations	57
3.3.4 High-throughput metabolite assays in microtiter scale	60

3.4	Characterization of prophage-free <i>C. glutamicum</i>	64
3.4.1	Irrelevance of prophage elements for a chassis	64
3.4.2	Stress response and heterologous protein expression	65
3.5	Deletion of non-essential gene clusters from prophage-free <i>C. glutamicum</i>	69
3.5.1	Relevance of non-essential gene clusters for growth of <i>C. glutamicum</i>	69
3.5.2	Growth and product formation of genome-reduced L-lysine producers	74
3.6	Combinatorial deletion of irrelevant gene clusters	77
3.6.1	Interdependence of irrelevant clusters in <i>C. glutamicum</i>	77
3.6.2	Effect of combinatorial deletion in strain W65	80
3.7	In-depth characterization of pre-chassis W121 and W127	83
3.7.1	Biological fitness under stress conditions and on other C-sources	83
3.7.2	Growth in lab-scale bioreactors	86
3.7.3	Morphology of W121	90
4.	Summary	93
5.	Conclusion and Outlook	97
6.	References	99
7.	Supplement	108
