ISBN 978-3-95806-212-2

Table of Content

Abstract.....	III
Zusammenfassung.....	IV
Abbreviations	VI
1 Introduction.....	1
1.1 <i>Corynebacterium glutamicum</i> as biotechnological platform organism	1
1.2 Genetic tools for strain improvement	1
1.2.1 Genome modification with non-replicative integration vectors	2
1.2.2 Homologous recombination by genetic engineering ('Recombineering')	3
1.2.3 Genome editing with CRISPR-Cas9	4
1.2.4 Expression plasmids with temperature-sensitive origins of replication	7
1.3 The most suitable test system for the development of genetic methods	8
1.4 Aims of this work	9
2 Material and Methods.....	10
2.1 Chemicals and enzymes	10
2.2 Bacterial strains and plasmids	10
2.3 Oligonucleotides.....	13
2.4 Cultivation preparations and procedures	13
2.4.1 Cultivation media	13
2.4.2 Cultivation of <i>E. coli</i> strains.....	14
2.4.3 Cultivation of <i>C. glutamicum</i> strains.....	14
2.4.4 Cultivation of <i>C. glutamicum</i> strains in the BioLector.....	14
2.4.5 Strain conservation of <i>C. glutamicum</i> strains.....	14
2.4.6 Determination of bacterial growth	15
2.5 Molecular biological methods.....	15
2.5.1 Isolation of DNA	15
2.5.2 Agarose gel electrophoresis.....	15
2.5.3 Recombinant DNA techniques	16
2.5.4 Transformation techniques.....	16
2.5.5 Amplification of DNA fragments via polymerase chain reaction.....	17
2.5.6 Construction of <i>C. glutamicum</i> mutants	18
2.5.7 DNA sequencing analysis	18
2.5.8 Genome editing methods	19
2.6 Quantitative measurement of L-lysine titers by HPLC.....	19
3 Results.....	20

Table of Content

3.1 dsDNA recombineering	20
3.1.1 Analysis of recombinases and variation of induction parameters	20
3.1.2 Possibilities and limitations of dsDNA recombineering.....	22
3.1.3 5'-modifications of DNA substrate	24
3.1.4 Comparison of dsDNA recombineering and ssDNA recombineering	25
3.2 CRISPR-Cas9	26
3.2.1 A functional nucleoprotein complex in <i>C. glutamicum</i>	26
3.2.2 Toxicity of Cas9	30
3.2.3 Influence of Cas9 on dsDNA recombineering	35
3.3 Temperature-sensitive origins of replication	37
3.4 Finding the best-suited test system for establishing the combination of CRISPR-Cas9 and DNA recombineering	38
3.4.1 Selection for kanamycin resistance	38
3.4.2 Selection by restriction analysis	39
3.4.3 Selection for streptomycin resistance	40
3.4.4 Selection for fluoroorotic acid resistance.....	41
3.4.5 Visual differentiation: Carotenoids.....	42
3.4.6 Visual differentiation: Crimson	42
3.4.7 Visual differentiation: β -Galactosidase activity	43
3.5 The way towards CRISPR-Cas9 recombineering.....	44
3.5.1 Suitable strains for CRISPR-Cas9 recombineering	45
3.5.2 CRISPR-Cas9 targeting with <i>C. glutamicum</i> strains DM1132::PH36lacZ and DM1132::PH36lacZ(+1).....	46
3.5.3 Simulation of CRISPR-Cas9 recombineering.....	47
3.5.4 CRISPR-Cas9 recombineering in <i>C. glutamicum</i>	48
3.6 Analysis of mutations leading to higher L-lysine production	49
4 Discussion.....	53
4.1 dsDNA recombineering in <i>C. glutamicum</i>	53
4.2 CRISPR-Cas9 targeting in <i>C. glutamicum</i>	56
4.3 CRISPR-Cas9 recombineering in <i>C. glutamicum</i>	58
4.4 The right test system to improve genome editing methods in <i>C. glutamicum</i>	60
4.5 MurE as target for L-lysine <i>C. glutamicum</i> production strain improvement	61
4.5 Summary and outlook.....	63
References.....	VII
Supplementary Data	XIX
