Table of content

Abstract	i
Kurzfassung	iii
Table of content	v
List of Abbreviations	ix
1. Introduction	1
2. Sodium-ion batteries and related materials.....	3
2.1. Sodium over Lithium	3
2.2. Secondary sodium-ion batteries	4
2.2.1. Composition and operation.....	4
2.2.2. Commercially available sodium-ion batteries	7
2.2.3. Solid-state sodium-ion battery.....	8
2.2.4. Materials for sodium-ion batteries	9
2.3. NASICON materials	14
2.3.1. Definition and compositional diversity	14
2.3.2. Structure and Conduction Pathway	15
2.3.3. Ionic conductivity	18
2.3.4. Correlation between composition and ionic conductivity	19
2.3.5. Bottleneck for the Na conduction	22
2.3.6. Scandium-based NASICON	23
3. Materials and methods.....	25
3.1. Preparation of samples	25
3.1.1. Polycrystalline samples	25
3.1.2. Single crystals	25
3.1.3. Preparation of batteries with bulk mixed cathode	25
3.1.4. Preparation of batteries with thin film electrode	26
3.2. Crystal structure determination.....	27
3.2.1. Group-subgroup relations between monoclinic and rhombohedral space groups	27
3.2.2. X-ray diffraction.....	28
3.2.3. Rietveld method	30
3.2.4. Neutron scattering	31
3.2.5. Vibrational spectroscopy.....	32
3.3. Electrochemical characterisation	33
3.3.1. Impedance spectroscopy.....	33

3.3.2.	Cyclic voltammetry	36
3.3.3.	Galvanostatic cycling	37
3.4.	Other characterisation techniques	38
3.4.1.	ICP-OES	38
3.4.2.	Scanning electron microscopy	38
3.4.3.	Energy-dispersive and wavelength-dispersive X-ray spectroscopy	39
3.4.4.	Nuclear magnetic resonance	39
3.4.5.	Relaxation NMR	40
3.4.6.	Thermal Analyses	40
3.5.	Theoretical investigation	41
4.	Results part 1: Study of the scandium-based solid solution	43
4.1.	Composition	43
4.2.	Crystal structure	45
4.2.1.	XRD results	45
4.2.2.	Neutron scattering results	49
4.2.1.	Raman spectroscopy results	51
4.2.2.	Single crystals	54
4.3.	Thermal behaviour	57
4.3.1.	High-temperature XRD	57
4.3.2.	Dilatometry	58
4.3.1.	Sintering behaviour	60
4.4.	Conductivity measurements	62
4.4.1.	Influence of the density	62
4.4.2.	Influence of the Na concentration	62
4.4.3.	Room temperature conductivity	64
4.4.4.	Influence of the storage conditions on the impedance measurements at high temperature	66
4.4.5.	Activation energy	69
5.	Discussion part 1: Study of the scandium-based solid solution	75
5.1.	Pathway for the Na conduction	75
5.1.1.	Rhombohedral NSSiP _x	75
5.1.2.	Monoclinic NSP	76
5.2.	Impact of the Na content on the conductivity	77
5.3.	Correlation between the lattice size and the conductivity	80
5.3.1.	Na hopping distance	80

5.3.2.	Bottleneck of Na conduction.....	81
5.3.3.	Distance between the Na atoms and the next oxygen atom.....	82
5.4.	Conductivity of the mixed phase NSSiP _{0.4}	83
6.	Results and discussion part 2: Solid electrolyte tested in NIB	85
6.1.	Mixed phase cathode	85
6.1.1.	Results	85
6.1.2.	Post mortem analysis	87
6.2.	Thin film cathode.....	89
6.2.1.	NaV ₃ O ₈ against Na metal	89
6.2.2.	Mo ₇ Sb ₃ and Cu ₂ Sb thin film anodes	93
6.2.3.	NaV ₃ O ₈ NSSiP _{0.4} Cu ₂ Sb cell.....	94
7.	Summary and conclusion.....	97
	References	101
	List of figures	111
	List of tables.....	117
	Annexes.....	119
	Acknowledgments.....	125
