

Photochemistry
of
Highly Oxidized Multifunctional Organic Molecules:
a Chamber Study

Inaugural-Dissertation
zur
Erlangung des Doktorgrades
der Mathematisch-Naturwissenschaftlichen Fakultät
der Universität zu Köln

vorgelegt von
Laura Iida Maria Pullinen
aus Iitti

Table of Contents

Zusammenfassung	V
Abstract	VI
Table of Contents	VII
1. Introduction	1
1.1. Highly oxidized multifunctional organic molecules (HOMs) in the atmosphere	1
1.2. Formation mechanism of highly oxidized multifunctional organic molecules via ozonolysis	3
1.3. Volatile organic compounds (VOC) in atmospheric photochemistry	5
2. Methods and experimental set-up	10
2.1. Experiment set-up	10
2.1.1. Jülich Plant Atmosphere Chamber	10
2.1.2. General instrumentation	12
2.2. Chemical ionization mass spectrometer	12
2.2.1. Instrument introduction	12
2.2.2. Calibration	17
2.3. Experiment protocols	19
2.3.1. Experiment overview	20
3. Photochemical HOM formation mechanism: Sequential oxidation versus autoxidation	25
3.1. HOM formation and autoxidation: setting the problem	25
3.2. Cyclohexene versus cyclohexene-d ₁₀	26
3.3. Monoterpenes: α -pinene	27
3.3.1. Photochemical HOM formation α -pinene	27
3.3.2. HOM formation from secondary OH oxidation: pinonaldehyde	29
3.4. HOM formation rate comparison	31
3.5. Effect of OH concentration on end product pattern	32
3.6. Conclusion: Autoxidation versus sequential oxidation	34
3.7. Experiment to study the role of O ₂ in the photochemical HOM formation	34
3.8. Photochemical HOM formation under reduced influence of ozonolysis	37
3.8.1. Photochemical HOM formation from β -pinene	37
3.8.2. Photochemical HOM formation from methyl salicylate and benzene	38
4. Photochemical HOM production	41
4.1. OH dependency of photochemical HOM from α -pinene	41
4.2. Yield estimation from photochemical HOM production from α -pinene	50
4.3. Photochemical HOM production from exocyclic double bonds: β -pinene	52
4.4. Concluding remarks on photochemical HOM production	54

5. Chemical transformation of HOMs	55
5.1. Photochemistry of α -pinene in the presence of NO_x	55
5.1.1. Formation of organic nitrates and PAN-like nitrates	58
5.1.2. The effect of NO_x on peroxy radical chemistry	59
5.2. Photochemistry of β -pinene in the presence of NO_x	68
5.3. CO + HOMs	71
5.4. Concluding remarks on chemical transformation HOMs	77
6. Sinks of HOMs: condensation on particles and wall loss	79
6.1. Condensation on particles	82
6.2. Concluding remarks	91
7. Summary and Conclusions	93
