# Contents

<b>1 Introduction</b>	<b>9</b>
1.1 Motivations and objectives . . . . .	9
1.2 Organization of this thesis . . . . .	12
1.3 Working principle and components of the HT-PEFC . . . . .	13
1.4 Thermodynamic and polarization curve . . . . .	17
1.5 Classification of the flow of an HT-PEFC . . . . .	20
1.6 Literature review . . . . .	23
1.6.1 Modelling work . . . . .	23
<b>2 Modelling aspects</b>	<b>29</b>
2.1 Assumptions and computational domain . . . . .	30
2.1.1 Assumptions . . . . .	30
2.1.2 Computational domain and operating conditions . . . . .	31
2.2 Basic model (model I) . . . . .	35
2.3 Macro-homogeneous model (model II) . . . . .	44
2.4 Water transfer model (model III) . . . . .	50
2.5 Multicomponent diffusion model using Maxwell-Stefan equations (model IV) . . . . .	57
2.6 Discretization methods . . . . .	61
<b>3 Numerical results</b>	<b>65</b>
3.1 Mesh independence study . . . . .	65
3.2 Simulations with the single channel pair . . . . .	68
3.2.1 Basic model (model I) . . . . .	68
3.2.2 Compression effect of GDL (model I) . . . . .	87
3.2.3 Multicomponent diffusion model (model IV) . . . . .	97
3.3 Simulations with the single cell with serpentine flow field . . . . .	107
3.3.1 Basic model (model I) and Macro-homogeneous model (model II) . . . . .	107
3.3.2 Water transfer model (model III) . . . . .	116
<b>4 Discussion</b>	<b>125</b>

<b>5 Conclusion</b>	<b>129</b>
<b>6 Appendix</b>	<b>131</b>
6.1 Experimental data for the parameter fitting of Model I and II . . . . .	131
6.2 Experimental data for the parameter fitting of Model III . . . . .	132
6.3 Derivation of the matrix form of Maxwell-Stefan relationship . . . . .	134
6.3.1 Basic equaitons . . . . .	134
6.3.2 Molar-based matrix form of Maxwell-Stefan relationship . . . . .	136
6.3.3 Mass-based matrix form of Maxwell-Stefan relationship with respect of gradient of molar fraction . . . . .	138
6.3.4 Relationship between gradient of mass fraction and gradient of molar fraction . . . . .	140
6.3.5 Mass-based matrix form of Maxwell-Stefan relationship with respect of gradient of mass fraction . . . . .	141
<b>References</b>	<b>143</b>
<b>Acknowledgments</b>	<b>173</b>
