Nanoscale 3D structures towards improved cell-chip coupling on microelectrode arrays

Sabrina Deniese Weidlich

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies

Band / Volume 156

ISSN 1866-1807

ISBN 978-3-95806-278-8

CONTENTS

1	INTRODUCTION	1
2	THEORETICAL BACKGROUND	7
2.1	Electrodeposition	7
2.1.1	Electrochemical double layer	7
2.1.2	The standard electrode potential	9
2.1.3	Kinetics	13
2.1.4	Nucleation and growth	14
2.1.5	Electrodeposition of gold	17
2.2	Electrophysiology	20
2.2.1	Resting potential	21
2.2.2	The action potential	23
2.2.3	Cell-cell transmission	26
2.2.4	Recording electrogenic activity	27
2.2.5	Point contact model, impedance, and sealing resistance	30
2.2.6	The 3D approach	33
2.2.7	Electroporation and membrane insertion	36
3	3D STRUCTURE DESIGN	39
3.1	Materials and Methods	40
3.1.1	3D electrode fabrication	40
3.1.2	HL-1 culture	42
3.1.3	Neuronal culture	43
3.1.4	Fixation and imaging	45
3.1.5	Quartz crystal microbalance	47
3.2	Results	48
3.2.1	Structure design	48
3.2.2	HL-1 culture on 3D structures	64
3.2.3	Neuronal culture on 3D structures	69

3.3 Conclusion	77
4 3D STRUCTURES ON MICROELECTRODE ARRAYS	79
4.1 Experimental	80
4.1.1 MEA fabrication	80
4.1.2 Cell culture	84
4.2 Results	86
4.2.1 3D structures on microelectrode arrays	86
4.2.2 Electrophysiological investigation of HL-1 cells on 3D electrodes	101
4.3 Conclusion	116
5 MODIFICATIONS	119
5.1 Experimental	120
5.1.1 Porous gold	120
5.1.2 Porous platinum	121
5.1.3 PEDOT:PSS	122
5.2 Results	123
5.2.1 Porous gold	123
5.2.2 Porous platinum	128
5.2.3 PEDOT:PSS	131
5.3 Conclusion	135
6 CONCLUSION AND OUTLOOK	137
APPENDIX	143
List of abbreviations	143
Variables and constants	144
REFERENCES	147
ACKNOWLEDGEMENT	155
