***Corynebacterium glutamicum* –
a novel platform for the production
of plant polyphenols**

Nicolai Kallscheuer

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies

Band / Volume 160

ISSN 1866-1807

ISBN 978-3-95806-291-7

Table of contents

Abstract.....	VII
Zusammenfassung.....	VIII
Abbreviations	IX
1. Scientific context and key results of this thesis.....	1
1.1 Polyphenols are secondary metabolites in plants	1
1.2 Access to polyphenols.....	3
1.3 Plant metabolic pathways leading to polyphenols.....	4
1.4 Current state of polyphenol production in engineered microorganisms.....	6
1.5. <i>Corynebacterium glutamicum</i> as novel host strain for polyphenol production?	8
1.5.1 <i>C. glutamicum</i> and its industrial relevance	8
1.5.2 Reactions and regulation of the shikimate pathway in <i>C. glutamicum</i>	9
1.5.3 Exploitation of <i>C. glutamicum</i> for the production of aromatic compounds	12
1.5.4 Degradation of aromatic compounds in <i>C. glutamicum</i>	12
1.6 From degradation to production - Engineered reversal of β -oxidative pathways	14
1.7 Aims of the thesis	15
1.8 Key results on engineering <i>C. glutamicum</i> towards polyphenol production.....	16
1.8.1 Discovery of a new phenylpropanoid degradation pathway in <i>C. glutamicum</i>	16
1.8.2 Construction of a <i>C. glutamicum</i> platform strain for polyphenol production	20
1.8.3 Production of stilbenes and (2S)-flavanones with <i>C. glutamicum</i> DelAro ⁴	21
1.8.4 Exploitation of <i>C. glutamicum</i> for the production of more complex polyphenols	22
1.8.5 Strain engineering towards polyphenol production from glucose.....	24
1.8.6 Design of a novel synthetic pathway for phenylpropanoid biosynthesis	26
1.9 Conclusions and Outlook	28
2. Peer-reviewed publications.....	30
2.1 Phenylpropanoid degradation in <i>C. glutamicum</i>	30
2.2 Stilbene and (2S)-flavanone production in <i>C. glutamicum</i>	41
2.3 Production of more complex polyphenols in <i>C. glutamicum</i>	50
2.4 A novel synthetic pathway for polyphenol production	57
2.5 Production of chemicals and polymer building blocks by reversal of β -oxidation	63
2.6 Improved production of adipate in <i>E. coli</i>	73

Table of contents

3. References	85
4. Appendix	94
4.1 Authors' Contributions	94
4.2 Other activities	96
Danksagung	97
