Bioelectronics (ICS-8)

Neurons on 3D polymer nanostructures

Andreea Anamaria Belu

Schriften des Forschungszentrums Jülich
Reihe Schlüsseltechnologien / Key Technologies

Band / Volume 161

ISSN 1866-1807

ISBN 978-3-95806-296-2

Table of contents

1. INTRODUCTION	1
2. FUNDAMENTALS	5
2.1. Neural tissue	5
2.1.1. Overview of the nervous system	5
2.1.2. Neural tissue anatomy	5
2.1.3. Development of neuronal cells	7
2.2. Cell-surface relationship	8
2.2.1. Cell adhesion on artificial substrates	8
2.2.1.1. <i>Cell interaction with the ECM</i>	9
2.2.1.2. <i>Cell- ECM linkage: adhesion complexes</i>	9
2.2.2. Neuronal guiding cues	10
2.2.2.1. <i>Chemical cues</i>	11
2.2.2.2. <i>Mechanical properties</i>	12
2.2.2.3. <i>Topography</i>	14
2.3 Selection of appropriate 3D materials	17
2.3.1. OrmoComp polymer	18
2.3.2. Parylene	19
2.4. Characterization of substrate surface and cell development	20
2.4.1. Profilometry	21
2.4.2. Atomic force microscopy (AFM)	21
2.4.3. Contact angle measurements	22
2.4.4. Scanning electron microscopy (SEM)	23
2.4.5. Focus Ion Beam-Scanning electron microscopy (FIB-SEM)	24
2.4.6. Fluorescence microscopy	25
2.5. Micro- and nanofabrication	25
2.5.1. Electron beam lithography (EBL)	26
2.5.2. Nanoimprint lithography (NIL)	26

3. MATERIALS AND METHODS	27
3.1. Substrate fabrication	27
3.1.1. Symmetric nanostructured fabrication (top-down approach)	27
3.1.1.1. Mold production	27
3.1.1.2. Surface modification for replica fabrication	28
3.1.1.3. OrmoComp double replication	28
3.1.1.4. Parylene replica	29
3.1.2. Asymmetric nanostructured fabrication (bottom-up approach)	30
3.2. Surface modification for cell culture experiments	31
3.3. <i>In vitro</i> primary neuron culture	31
3.4. Neuron staining	32
3.4.1. Live-dead staining	33
3.4.2. Immunofluorescence staining	33
3.5. Sample preparation for electron microscopy	36
3.5.1. Critical point drying technique	36
3.5.2. Ultra-thin resin embedding method	36
3.6. Neuron-surface interface characterization: SEM and FIB-SEM	37
4. SUBSTRATE AND REPLICA FABRICATION	39
4.1. Design	39
4.2. Mold fabrication and characterization	40
4.2.1. Optimization of fabrication parameters	41
4.2.2. Wafers with 100 nm structures depth	44
4.2.3. Wafers with 400 nm structures depth	47
4.3. OrmoComp single and double replication	48
5. CHARACTERIZATION OF CELL-SURFACE INTERFACE	51
5.1. Cell-3D interface investigation by fluorescence and electron microscopy	51
5.2. Resin embedding method	52
5.3. Optimization protocol for neuron-surface interface characterization	54

5.3.1. Comparison of critical point drying <i>vs.</i> resin embedding method	56
5.3.2. Fluorescence and electron microscopy investigation of cell-surface interface	59
6. NEURONAL RESPONSES ON 3D POLYMER NANOSTRUCTURES	61
6.1. Interactions of neurons with isotropic structures	61
6.1.1. Neuronal viability	62
6.1.2. Influence of isotropic nanopillars on neuronal development	64
6.1.3. Axon initiation and path finding angle	72
6.1.4. Neurons alignment for different pillar heights	73
6.1.5. Exploring the cell-nanostructure interface	76
<i>6.1.5.1. Arrays with pitch double the diameter</i>	76
<i>6.1.5.2. Arrays with constant pitch</i>	79
6.2. Interactions of neurons with anisotropic structures on different polymeric surfaces	89
6.2.1. Patterning and guidance of neurons on linear gradient nanosurfaces	89
<i>6.2.1.1. OrmoComp nanosurface</i>	89
<i>6.2.1.1. Parylene nanosurface</i>	94
6.2.2. Parylene nanostructured films deposited by oblique angle	98
<i>6.2.2.1. Substrate characterization and modification</i>	99
<i>6.2.2.2. Neuronal viability and development</i>	100
<i>6.2.2.3. Adhesion and interface study</i>	104
<i>6.2.2.4. Axon initiation and path finding angle</i>	106
7. CONCLUSIONS AND OUTLOOK	111
8. REFERENCES	115
ACKNOWLEDGMENTS	129
